JOURNAL OF Econometrics

SUBJECT INDEX

VOLUMES 1-10

1973-1979

PERIODICAL

Room
10139
J67

U.H. LIBRARY

CMB6 10 (SI) 389 453
(1979)

LAST ISSUE OF THIS VOLUME

NORTH-HOLLAND

Editorial Policy:

The Journal of Econometrics is designed to serve as an outlet for important new research in both theoretical and applied econometrics. Papers dealing with estimation and other methodological aspects of the application of statistical inference to economic data as well as papers dealing with the application of econometric techniques to substantive areas of economics fall within the scope of the Journal. Econometric research in the traditional divisions of the discipline or in the newly developing areas of social experimentation are decidedly within the range of the Journal's interests.

The Journal of Econometrics will be published in volumes of approximately 400 pages, each consisting of three issues of approximately 135 pages.

Editors:

D.J. AIGNER, Department of Economics, University of Southern California, Los Angeles, CA 90007, USA
A. ZELLNER, Graduate School of Business, University of Chicago, Chicago, IL 60637, USA

Associate Editors:

P. BALESTRA, University of Fribourg, Switzerland; E. DIEWERT, University of British Columbia, Vancouver, BC, Canada; G.R. FISHER, Queen's University, Kingston, Ont., Canada; A.R. GALLANT, North Carolina State University, Raleigh, NC, USA; S. GOLDFELD, Princeton University, Princeton, NJ, USA; C.W.J. GRANGER, University of California, San Diego, La Jolla, CA, USA; G. HANOCH, The Hebrew University, Jerusalem, Israel; J.J. HECKMAN, University of Chicago, Chicago, IL, USA; G.G. JUDGE, University of Illinois, Urbana-Champaign, IL, USA; T. KLOEK, Erasmus University, Rotterdam, The Netherlands; C. NELSON, University of Washington, Seattle, WA, USA; D.A. PIERCE, Federal Reserve System, Washington, DC, USA; E. PRESCOTT, Carnegie-Mellon University, Pittsburgh, PA, USA; T. SAWA, Kyoto University, Japan; P. SCHMIDT, Michigan State University, East Lansing, MI, USA; P. SCHÖNFELD, University of Bonn, West Germany; P.A.V.B. SWAMY, Federal Reserve System, Washington, DC, USA.

Supplement:

The Journal of Econometrics includes a supplementary series entitled "Annals of Applied Econometrics", totalling approximately 400 pages a year, and sent free of charge to personal subscribers.

Submission Fee:

There is a submission fee of \$25.00 for all unsolicited manuscripts submitted for publication. Personal cheques or money orders should accompany the manuscripts and be made payable to the Journal of Econometrics. The submission fees will be used to subsidize free distribution of the Annals of Applied Econometrics to personal subscribers.

Subscriptions:

Institutional subscriptions: the 1979 subscription price for three volumes (two regular volumes and the Annals of Applied Econometrics) is SwFrS 375.00 (US\$197.50) including postage. *Personal subscriptions:* private subscribers are entitled to a subscription at the reduced rate of SwFrS 126.00 (US\$66.50) including postage (the Annals of Applied Econometrics will be supplied to private subscribers free of charge). For personal subscriptions the following rules apply: (1) the subscription must be prepaid; (2) the order must be sent directly to the Publisher; (3) the copies should not be made available to institutions. *Separate "Annals of Applied Econometrics" subscriptions - Institutional:* SwFrS 125.00 (US\$66.00). *Personal:* SwFrS 55.00 (US\$28.95). Subscription orders may be sent to: Elsevier Sequoia S.A., P.O. Box 851, CH-1001 Lausanne 1, Switzerland, or, with the exception of personal subscriptions, to any subscription-agent or bookseller.

The Swiss franc price is definitive; the currency equivalent is for your guidance only.

Claims for issues not received will be honored free of charge if made within three months of the publication date.

JOURNAL OF ECONOMETRICS

SUBJECT INDEX

Volumes 1-10, 1973-1979

Compiled by Linda D. Anderson

This subject index uses keywords as the basis for its organization. This usage allows the user a wide choice of words or phrases to look for when trying to find an article on a particular topic. It also gives the user quick access to other articles concerning the same topic. There are two types of keywords used - those that result from a word in the title of an article and those that result from an important word or phrase describing the contents of an article. All keywords are listed in alphabetical order. They are also printed in italicized type to set them apart from the rest of the title. An example will make this procedure clear.

Identification

Education, income and ability revisited. Gary Chamberlin.....	5 (1977) 241-257
First order ____ in linear models. Alain Monfort.....	7 (1978) 333-350
Local and global ____ and strong consistency in time series models. R. Kohn.....	8 (1978) 269-293
Several efficiency two-step estimators for the dynamic simultaneous equations model with autoregressive disturbances. Michio Hatanaka.	4 (1976) 189-204
The first-order moving average process: ____, estimation and pre- diction. Charles R. Nelson.....	2 (1974) 121-141
The problem of ____ in finite parameter continuous time models. P.C.B. Phillips.....	1 (1973) 351-362
The use of monthly and quarterly data in an ARMA model. F.A.G. Den Butter.....	4 (1976) 311-324
<i>Identification</i> and normalization. Dennis J. Aigner and T. Sawa.....	2 (1974) 389-391
<i>Identification</i> of simultaneous equation models with measurement error. Vincent J. Geraci.....	4 (1976) 263-283
<i>Identification test</i> * The graph of the <i>k</i> -class estimators: An algebraic and statistical interpretation. R.W. Farebrother and N.E. Savin.....	2 (1974) 373-388

The last entry is for the keyword 'identification test'. There is only one article for which it is a keyword. In this case both the keyword and the title appear on the same line, separated by an asterisk (*). If a keyword is used for more than one article, as is the case with 'identification', the keyword is

listed on one line and all titles using this keyword are listed below it. If the keyword is the first word of an article title it is italicized and the remainder of the title follows it. When a word which is in the title of an article is used as the keyword it is omitted from the article title and replaced by ____ which shows exactly where in the article this keyword fits in. For example in:

First order ____ in linear models. Alain Monfort..... 7 (1978) 333-350

the ____ stands for identification. Thus the complete title of the article is 'First order identification in linear models'. The author is Alain Monfort and the article appears in Volume 7, 1978, on pages 333-350.

- Abrahamse and Koerts' 'new estimators' of disturbances in regression analysis.* Heinz Neudecker..... 5 (1977) 129-133
- Adaptive expectations model * Inconsistency of the OLS estimator of the partial adjustment—* H.E. Doran and W.E. Griffiths 7 (1978) 133-146
- Additive error * Nonlinear models of analysis of variance.* Jean-Pierre Laffargue 5 (1977) 347-363
- Additive translog demand systems * Specification and estimation of dynamic demand systems incorporating polynomial price response functions: An application to U.S. clothing imports.* J. Stuart McMenamin and Jean-Paul Pinard 7 (1978) 147-162
- Additivity*
- A comparative study of complete systems of demand functions. N. Anders Klevmarken 10 (1979) 165-191
- Estimating U.S. consumer preferences for meat with a flexible utility function. Laurits R. Christensen and Marilyn E. Manser 5 (1977) 37-53
- Ad hoc filtering procedures * Causality in temporal systems: Characterizations and a survey.* David A. Pierce and Larry D. Haugh 5 (1977) 265-293
- Adjustment model with autoregressive errors * An efficient two-step estimator for the dynamic —.* Michio Hatanaka 2 (1974) 199-220
- Adjustment processes * An econometric model of the Australian economy.* C.I. Higgins and V.W. Fitzgerald 1 (1973) 229-265
- Aggregate predictions * Predictions from binary choice models.* Richard B. Westin 2 (1974) 1-16
- Aggregated and temporally disaggregated data * Linear regression using both temporally —.* Cheng Hsiao 10 (1979) 243-252
- Aggregated data * Estimation with —.* R.W. Farebrother 10 (1979) 43-55
- Aggregated flow problem * Some consequences of temporal aggregation and systematic sampling for ARMA and ARMAX models.* K.R.W. Brewer 1 (1973) 133-154
- Aggregates * Forecasting — of independent ARIMA processes.* David E. Rose 5 (1977) 323-345
- Aggregation*
- Bayesian analysis of the Federal Reserve-MIT-Penn model's Almon lag consumption function. Arnold Zellner and Anne D. Williams 1 (1973) 267-299
- Retail inventory investment behaviour. P.K. Trivedi 1 (1973) 61-80
- The translog function and the substitution of equipment, structures, and labor in U.S. manufacturing 1929-68. Ernst R. Berndt and Laurits R. Christensen 1 (1973) 81-114
- Some consequences of temporal — and systematic sampling for ARMA and ARMAX models. K.R.W. Brewer 1 (1973) 133-154
- The effect of temporal — on parameter estimation in distributed lag models. William W.S. Wei 8 (1978) 237-246
- Single-equation estimators and — restrictions when equations have the same set of regressors. Frank T. Denton 8 (1978) 173-179
- Aggregation bias*
- A note on — and loss. C.A. Knox Lovell 1 (1973) 301-311
- Forecasting aggregates of independent ARIMA processes. David E. Rose 5 (1977) 323-345
- Aggregation problems * An empirical analysis of linear —: The case of investment behavior in Japanese firms.* Komei Sasaki 7 (1978) 313-331
- Aggregative econometric models * The reconstruction of index data in —.* Dit Sang Ho 10 (1979) 333-359
- Aggregator functional form * Exact and superlative index numbers.* W.E. Diewert 4 (1976) 115-145
- Aitken estimator*
- A note on three-stage least-squares estimation. Agustin Maravall 4 (1976) 325-330

- Best quadratic unbiased estimators of the variance-covariance matrix in normal regression. Pietro Balestra..... 1 (1973) 17-28
- Maximum likelihood estimation of the GLS model with unknown parameters in the disturbance covariance matrix. Jan R. Magnus..... 7 (1978) 281-312
- Aitken estimator, residual-adjusted*
- An efficient two-step estimator for the dynamic adjustment model with autoregressive errors. Michio Hatanaka..... 2 (1974) 199-220
- A note on an efficient two-step estimator. Phoebus J. Dhrymes..... 2 (1974) 301-304
- Relative efficiencies of some simple Bayes estimators of coefficients in a dynamic equation with serially correlated errors - II. Paravastu A.V.B. Swamy and Paul N. Rappoport..... 7 (1978) 245-258
- Aliasing problem* * The problem of identification in finite parameter continuous time models. P.C.B. Phillips 1 (1973) 351-362
- Allen-Uzawa partial elasticities* * Duality theory and pitfalls in the specification of technologies. David F. Burgess..... 3 (1975) 105-121
- Allocative inefficiency* * Estimating technical and _____ relative to stochastic production and cost frontiers. Peter Schmidt and C.A. Knox Lovell 9 (1979) 343-366
- Almon lag consumption function* * Bayesian analysis of the Federal Reserve-MIT-Penn model's _____. Arnold Zellner and Anne D. Williams 1 (1973) 267-299
- Almon polynomial technique* * Harmonic alternatives to the _____. Susan S. Hamlen and William A. Hamlen, Jr. 7 (1978) 57-66
- Amemiya estimator* * A note on non-linear limited-information maximum-likelihood. William J. Raduchel..... 7 (1978) 119-122
- Analysis of variance* * Nonlinear models of _____. Jean-Pierre Laffargue ... 5 (1977) 347-363
- Anderson moving average theorem* * On the structure of moving average processes. Craig F. Ansley, W. Allen Spivey and William J. Wroblewski..... 6 (1977) 121-134
- Approximate minimum mean square error estimator* * Relative efficiencies of some simple Bayes estimators of coefficients in a dynamic equation with serially correlated errors - II. Paravastu A.V.B. Swamy and Paul N. Rappoport..... 7 (1978) 245-258
- ARIMA models* * Estimation of a non-invertible moving average process: The case of over-differencing. Charles I. Plosser and G. William Schwert..... 6 (1977) 199-224
- ARIMA processes* * Forecasting aggregates of independent _____. David E. Rose 5 (1977) 323-345
- ARMA*: See also Autoregressive moving average.....
- ARMA and ARMAX models* * Some consequences of temporal aggregation and systematic sampling for _____. K.R.W. Brewer 1 (1973) 133-154
- ARMA disturbances* * FIML estimation of the dynamic simultaneous equations model with _____. Greg Reinsel..... 9 (1979) 263-281
- ARMA model(s)*
- Local and global identification and strong consistency in time series models. R. Kohn 8 (1978) 269-293
- Some consequences of temporal aggregation and systematic sampling for ARMA and _____. K.R.W. Brewer..... 1 (1973) 133-154
- The use of monthly and quarterly data in an _____. F.A.G. Den Butter 4 (1976) 311-324
- ARMA processes* * On univariate time series methods and simultaneous equation econometric models. Franz Palm..... 5 (1977) 379-388
- Assignment condition* * Identification of simultaneous equation models with measurement error. Vincent J. Geraci..... 4 (1976) 263-283
- Asymptotic covariance matrix*
- Recursions for the two-stage least-squares estimators. Garry D.A. Phillips..... 6 (1977) 65-77

- The nonlinear limited-information maximum likelihood estimator and the modified nonlinear two-stage least-squares estimator. Takeshi Amemiya 3 (1975) 375-386
- Asymptotic distribution*
- Polynomial operators and ____ of dynamic multipliers. Leonard Gill and Sophocles N. Brissimis 7 (1978) 373-384
- Testing the exogeneity specification in the complete dynamic simultaneous equation model. John Geweke 7 (1978) 163-185
- Testing unstable econometric models for stability: An empirical study. Elizabeth F. Gustafson 8 (1978) 193-201
- The behaviour of inconsistent instrumental variables estimators in dynamic systems with autocorrelated errors. David F. Hendry 9 (1979) 295-314
- The nonlinear two-stage least-squares estimators. Takeshi Amemiya 2 (1974) 105-110
- Asymptotic efficiency*
- An efficient two-step estimator for the dynamic adjustment model with autoregressive errors. Michio Hatanaka 2 (1974) 199-220
- Linear regression using both temporally aggregated and temporally disaggregated data. Cheng Hsiao 10 (1979) 243-252
- Asymptotic normality*
- On testing hypotheses in simultaneous equations models. Alison Morgan and Walter Vandaele 2 (1974) 55-65
- Seemingly unrelated nonlinear regressions. A. Ronald Gallant 3 (1975) 35-50
- Three-stage least-squares estimation for a system of simultaneous, nonlinear-implicit equations. A. Ronald Gallant 5 (1977) 71-88
- Asymptotic properties* * Least squares and stochastic difference equations. Bernt P. Stigum 4 (1976) 349-370
- Asymptotic properties* of a correlation coefficient type statistic connected with the general linear model. Laurens de Haan and Elselien Taconis-Haantjes 7 (1978) 15-21
- Asymptotic properties* of econometric estimators: Monte Carlo methodology and the small sample behaviour of ordinary and two-stage least squares. David F. Hendry and Robin W. Harrison 2 (1974) 151-174
- Asymptotic properties* of full information estimators in dynamic autoregressive simultaneous equation models. Phoebus J. Dhrymes and H. Erlat 2 (1974) 247-259
- Asymptotic results* * Estimation in the first-order moving average model through the finite autoregressive approximation: Some _____. Raul Pedro Mentz 6 (1977) 225-236
- Asymptotic standard error* * The graph of the k -class estimator: An algebraic and statistical interpretation. R.W. Farebrother and N.E. Savin 2 (1974) 373-388
- Asymptotic variance* * MSE dominance of least squares with errors-of-observation. Dennis J. Aigner 2 (1974) 365-372
- Asymptotically efficient estimators*
- Estimation of a dynamic system of seemingly unrelated regressions with autoregressive disturbances. David E. Spencer 10 (1979) 227-241
- Several efficient two-step estimators for the dynamic simultaneous equations model with autoregressive disturbances. Michio Hatanaka. 4 (1976) 189-204
- The construction and estimation of continuous time models and discrete approximations in econometrics. Peter M. Robinson 6 (1977) 173-197
- Asymptotics for the k -class estimators* * Some large-concentration parameter _____. Roberto S. Mariano 3 (1975) 171-177
- Autocorrelated disturbances* * Omitted variables, variability of estimated parameters and the appearance of _____. Yash Pal Gupta and Esfandiar Maasoumi 9 (1979) 379-385
- Autocorrelated disturbances* in the light of specification analysis. Maitreyi Chaudhuri (Mukherjee) 5 (1977) 301-313

Autocorrelated errors

- Maximum likelihood estimation of the GLS model with unknown parameters in the disturbance covariance matrix. Jan R. Magnus 7 (1978) 281-312
- Spurious regressions in econometrics. C.W.J. Granger and P. Newbold 2 (1974) 111-120
- The behaviour of inconsistent instrumental variables estimators in dynamic systems with _____. David F. Hendry..... 9 (1979) 295-314
- The structural identifiability of linear models with _____ in the case of cross-equation restrictions. Manfred Deistler 8 (1978) 23-31

Autocorrelation

- An inequality with a time series application. O.D. Anderson..... 2 (1974) 189-193
- Estimating and testing for functional form and _____: A simultaneous approach. N.E. Savin and Kenneth J. White 8 (1978) 1-12
- Fourth-order _____: Further significance points for the Wallis Test. D.E.A. Giles and M.L. King..... 8 (1978) 255-259
- On choosing the optimal level of significance for the Durbin-Watson test and the Bayesian alternative. Thomas B. Fomby and David K. Guilkey 8 (1978) 203-213
- On the impact of the tests for serial correlation upon the test of significance for the regression coefficient. Alice Nakamura and Masao Nakamura 7 (1978) 199-210
- Testing for _____ in the autoregressive moving average error model. John Fitts..... 1 (1973) 363-376
- The first-order moving average process: Identification, estimation and prediction. Charles R. Nelson..... 2 (1974) 121-141
- The power of four tests of _____ in the linear regression model. Wilford L. L'Esperance and Daniel Taylor 3 (1975) 1-21

Autocorrelation and dynamic methodology with an application to wage determination models. Lloyd R. Kenward.....

3 (1975) 179-187

Autocorrelation estimators * The structure of simultaneous equations estimators. David F. Hendry

4 (1976) 51-88

Autocorrelation tests * On typical characteristics of economic time series and the relative qualities of five _____. C. Dubbelman, A.S. Loufer and A.P.J. Abrahamse.....

8 (1978) 295-306

Australian economy * An econometric model of the _____. C.I. Higgins and V.W. Fitzgerald

1 (1973) 229-265

Autoregression * The sampling distribution of forecasts from a first-order _____. Peter C.B. Phillips.....

9 (1974) 241-261

Autoregressive approximation * Estimation in the first-order moving average model through the finite _____. Some asymptotic results. Raul Pedro Mentz.....

6 (1977) 225-236

Autoregressive disturbances

Estimation of a dynamic system of seemingly unrelated regressions with _____. David E. Spencer.....

10 (1979) 227-241

Several efficient two-step estimators for the dynamic simultaneous equations model with _____. Michio Hatanaka

4 (1976) 189-204

Autoregressive errors

A note on an efficient two-step estimator. Phoebus J. Dhrymes.....

2 (1974) 301-304

An efficient two-step estimator for the dynamic adjustment model with _____. Michio Hatanaka

2 (1974) 199-220

Autocorrelation and dynamic methodology with an application to wage determination models. Lloyd R. Kenward

3 (1975) 179-187

The structure of simultaneous equations estimators. David F. Hendry...

4 (1976) 51-88

Autoregressive error models * Full maximum likelihood estimation of second-order _____. Charles M. Beach and James G. MacKinnon

7 (1978) 187-198

Autoregressive error specification * Alternative tests for a first-order vector _____. David K. Guilkey.....

2 (1974) 95-104

Autoregressive forms * Discriminating between a Monte Carlo comparison of Bayesian and ad hoc methods. D.E.A. Giles

3 (1975) 229-248

- Autoregressive integrated moving average processes* * A Monte Carlo study of _____. Warren Dent and An-Sik Min..... 7 (1978) 23-55
- Autoregressive model*
- Relative efficiencies of some simple Bayes estimators of coefficients in dynamic models - I. P.A.V.B. Swamy and Paul N. Rappoport..... 3 (1975) 273-296
- The exact moments of the least squares estimator for the _____. Takamitsu Sawa 8 (1978) 159-172
- Autoregressive moving average*
- Testing for autocorrelation in the ____ error model. John Fitts..... 1 (1973) 363-376
- Time series analysis and simultaneous equation econometric models. Arnold Zellner and Franz Palm..... 2 (1974) 17-54
- Autoregressive process* * Differencing of random walks and near random walks. Nicholas J. Gonedes and Harry V. Roberts..... 6 (1977) 289-308
- Autoregressive relationships* * On the impact of the tests for serial correlation upon the test of significance for the regression coefficient. Alice Nakamura and Masao Nakamura 7 (1978) 199-210
- Autoregressive simultaneous equation models* * Asymptotic properties of full information estimators in dynamic _____. Phoebus J. Dhrymes and H. Erlat 2 (1974) 247-259
- Average efficiency* * The stochastic frontier production function and _____. An empirical analysis. Lung-Fei Lee and William G. Tyler 7 (1978) 385-389
- Bank spectrum regression estimators* * A comparative study of finite sample properties of _____. Svend Hylleberg 5 (1977) 167-182
- Bank behaviour* * On estimation of an econometric model of short-run _____. Dennis J. Aigner 1 (1973) 201-228
- Bayes estimators*
- Relative efficiencies of some simple ____ of coefficients in dynamic models - I. P.A.V.B. Swamy and Paul N. Rappoport 3 (1975) 273-296
- Relative efficiencies of some simple ____ of coefficients in a dynamic equation with serially correlated errors - II. P.A.V.B. Swamy and Paul N. Rappoport 7 (1978) 245-258
- The existence of moments of some simple ____ of coefficients in a simultaneous equation model. Jatinder S. Mehta and Paravastu A.V.B. Swamy 7 (1978) 1-13
- Bayesian alternative* * On choosing the optimal level of significance for the Durbin-Watson tests and the _____. Thomas B. Fomby and David K. Guilkey..... 8 (1978) 203-213
- Bayesian analysis*
- Normalization in point estimation. Walter D. Fisher 4 (1976) 243-252
- Normalization in point estimation, Comment, Reply, and Rejoinder. Joseph B. Kadane and Walter D. Fisher 7 (1978) 123-129
- Some aspects of bivariate regression subject to linear constraints. George C. Tiao and Wei-Yuan Tan..... 5 (1977) 13-35
- Bayesian analysis* of optimal sample size and a best decision rule for experiments in direct load control. Dennis J. Aigner..... 9 (1979) 209-221
- Bayesian analysis* of the Federal Reserve-MIT-Penn model's Almon lag consumption function. Arnold Zellner and Anne D. Williams..... 1 (1973) 267-299
- Bayesian and ad hoc methods* * Discriminating between autoregressive forms: A Monte Carlo comparison of _____. D.E.A. Giles 3 (1975) 229-248
- Bayesian and non-Bayesian estimation* * On ____ of a two-level CES production function for the Dutch manufacturing sector. Rins Harkema and Sybrand Schim van der Loeff..... 5 (1977) 155-165
- Bayesian approach* * Rational expectations and the econometric modeling of markets subject to uncertainty: A _____. Sanford Grossman.... 3 (1975) 255-272
- Bayesian assessment* of the unconditional mean square error of repeated predictions from a regression equation. Nicholas J. Gonedes and Harry V. Roberts..... 2 (1974) 221-240

Bayesian estimation

- A _____ of macro and micro CES production functions. Hiroki Tsurumi and Yoshi Tsurumi..... 4 (1976) 1-25
- A note on the _____ of Solow's distributed lag model. Robert S. Guthrie..... 4 (1976) 295-300
- On _____ of seemingly unrelated regressions when some observations are missing. P.A.V.B. Swamy and J.S. Mehta..... 3 (1975) 157-169
- Bayesian estimation of a random coefficient model.* William E. Griffiths, Ross G. Drynan and Surekha Prakash..... 10 (1979) 201-220
- Bayesian methods* * Posterior distribution for the multiple correlation coefficient with fixed regressors. S. James Press and Arnold Zellner... 8 (1978) 307-321
- Bayesian regression analysis* using poly-*t* densities. Jacques H. Dreze..... 6 (1977) 329-354
- Bayesian test*
- A _____ of a parameter shift and an application. Hiroki Tsurumi..... 6 (1977) 371-380
- A _____ of the product cycle hypothesis applied to Japanese crude steel production. Hiroki Tsurumi..... 4 (1976) 371-392
- Bayesian test, Lindley type* * On testing hypotheses in simultaneous equations models. Alison Morgan and Walter Vandaele..... 2 (1974) 55-65
- Behaviour*
- Monte Carlo methodology and the small sample _____ of ordinary and two-stage least-squares. David F. Hendry and Robin W. Harrison..... 2 (1974) 151-174
- On estimation of an econometric model of short-run bank _____. Dennis J. Aigner..... 1 (1973) 201-228
- Retail inventory investment _____. P.K. Trivedi..... 1 (1973) 61-80
- Testing price taking _____. Elie Appelbaum..... 9 (1979) 283-294
- The _____ of inconsistent instrumental variables estimators in dynamic systems with autocorrelated errors. David F. Hendry..... 9 (1979) 295-314
- Behaviour theory* * A class of dynamic models for describing and projecting industrial development. Richard H. Day and Jon P. Nelson..... 1 (1973) 155-190
- Berkson estimator* * The modified second-round estimator in the general qualitative response model. Takeshi Amemiya..... 5 (1977) 295-299
- Berndt-Christensen nonlinear test* * On testing separability restrictions with flexible functional forms. Charles Blackorby, Daniel Primont and R. Robert Russell..... 5 (1977) 195-209
- Best augmented unbiased scalar (BAUS) residual vectors* * Uncorrelated residuals from linear models. Warren T. Dent and George P.H. Styan..... 7 (1978) 211-225
- Best quadratic unbiased estimators* of the variance-covariance matrix in normal regression. Pietro Balestra..... 1 (1973) 17-28
- Bias*
- A note on _____ and loss. C.A. Knox Lovell..... 1 (1973) 301-311
- Estimation of the elasticity of substitution in the presence of errors of measurement. Grant M. Scobie and Paul R. Johnson..... 3 (1975) 51-56
- On the estimation of Engel elasticities from grouped observations with application to Indonesian data. Nanak Kakwani..... 6 (1977) 1-19
- The _____ and mean squared error of forecasts from partially restricted reduced form. Anirudh L. Nagar and Surettam N. Sahay..... 7 (1978) 227-243
- The small sample _____ of Durbin's tests for serial correlation: When one of the regressors is the lagged dependent variable and the null hypothesis is true. Byron G. Spencer..... 3 (1974) 249-254
- Bias aggregation* * Forecasting aggregates of independent ARIMA processes. David E. Rose..... 5 (1977) 323-345
- Bilinear splines* * On the use of _____ in economics. Dale J. Poirier..... 3 (1975) 23-34
- Binary choice models*
- Predictions from _____. Richard B. Westin..... 2 (1974) 1-16
- Predictions from _____. A note. Tony Lancaster..... 9 (1979) 387-389
- Binary independent variable* * Regression with a _____ subject to errors of observation. Dennis J. Aigner..... 1 (1973) 49-60

- Bivariate regression* * Some aspects of ____ subject to linear constraints.
George C. Tiao and Wei-Yuan Tan..... 5 (1977) 13-35
- Block recursive production sector* * An econometric model of the
petroleum industry. Patricia Rice and V. Kerry Smith..... 6 (1977) 263-287
- BLUE* * A note on least squares estimation and the ____ in a
generalized linear regression model. Peter Schonfeld..... 3 (1975) 189-197
- BLUS*
A comparison of the power of some tests for heteroskedasticity in the
general linear model. A.C. Harvey and G.D.A. Phillips..... 2 (1974) 307-316
Uncorrelated residuals from linear models. Warren T. Dent and
George P.H. Styan..... 7 (1978) 211-225
- Borel-measurable functions* * A note on the measurability of the pseudo-
inverse. Peter Schonfeld..... 1 (1973) 313-314
- Bounded OLS estimates* * Measurement errors and _____. Maurice D.
Levi..... 6 (1977) 165-171
- Box* * On a lemma associated with _____, Jenkins and Granger. O.D.
Anderson..... 3 (1975) 151-156
- Box-Cox model* * Estimating and testing for functional form and
autocorrelation: A simultaneous approach. N.E. Savin and Kenneth
J. White..... 8 (1978) 1-12
- Box-Cox transformation*
A simultaneous equations system of money demand and supply using
generalized functional forms. John J. Spitzer..... 5 (1977) 117-128
Experience with using the ____ when forecasting economic series.
Harold L. Nelson, Jr. and C.W.J. Granger..... 10 (1979) 57-69
- Box-Jenkins techniques* * Time series analysis and simultaneous equation
econometric models. Arnold Zellner and Franz Palm..... 2 (1974) 17-54
- Bracketing* * Estimation of the elasticity of substitution in the presence
of errors of measurement. Grant M. Scobie and Paul R. Johnson..... 3 (1975) 51-56
- Brazilian manufacturing firms* * The stochastic frontier production func-
tion and average efficiency: An empirical analysis. Lung-Fei Lee
and William G. Tyler..... 7 (1978) 385-389
- Brazilian output series* * Testing income series: An application of
principal components. C.L. Haddad..... 4 (1976) 24-40
- Cagan's money demand function* * The analysis of seasonal economic
models. Charles I. Plosser..... 10 (1979) 147-163
- Call options* * Chicago Board ____ as predictors of common stock price
changes. D. Panton..... 4 (1976) 101-113
- Canadian manufacturing*
The demand for energy in ____: An example of the estimation of
production structures with many inputs. Melvyn A. Fuss..... 5 (1977) 89-116
The existence of a real value-added function in the ____ sector.
Michael Denny and Doug May..... 5 (1977) 55-69
- Canonical ridge* and econometric of joint production. H.D. Vinod..... 4 (1976) 147-166
- Capital asset pricing model* * Spectral analysis of public utility returns.
Michael A. Goldberg and Ashok Vora..... 6 (1977) 79-101
- Cardinal variables* * Correlations with ordinal data. David M. Grether..... 2 (1974) 241-246
- Cauchy integral formula* * Determining the final form of a linear dynamic
econometric model. Piet de Jong..... 8 (1978) 181-192
- Causal variables* * Modeling monetary policy as an unobserved variable.
Robert B. Avery..... 10 (1979) 291-311
- Causality*
Multidimensional scaling: Some econometric applications. Shlomo
Maital..... 8 (1978) 33-46
The characterization of instantaneous ____: A Comment. David A.
Pierce and Larry G. Haugh..... 10 (1979) 257-259

- The characterization of instantaneous ____: A correction. I. Michael Price..... 10 (1979) 253-256
- Causality* in temporal systems: Characterizations and a survey. David A. Pierce and Larry D. Haugh..... 5 (1977) 265-293
- Censored regression models* with unobserved, - stochastic censoring thresholds. Forrest D. Nelson..... 6 (1977) 309-327
- CES, dynamic* * Specification and estimation of dynamic demand systems incorporating polynomial price response functions: An application to U.S. clothing imports. J. Stuart McMenamin and Jean-Paul Pinard..... 7 (1978) 147-162
- CES production function(s)*
- A Bayesian estimation of macro and micro CES production functions. Hiroki Tsurumi and Yoshi Tsurumi..... 4 (1976) 1-25
- A Bayesian test of the product cycle hypothesis applied to Japanese crude steel production. Hiroki Tsurumi..... 4 (1976) 371-392
- A note on aggregation bias and loss. C.A. Knox Lovell..... 1 (1973) 301-311
- On Bayesian and non-Bayesian estimation of a two-level ____ for the Dutch manufacturing sector. Rins Harkema and Sybrand Schim van der Loeff..... 5 (1977) 155-165
- CES utility functions* * On the flexibility of flexible functional forms: An empirical approach. Terence J. Wales..... 5 (1977) 183-193
- Chilian manufacturing sector* * The translog production function: Some evidence from establishment data. Vittorio Corbo and Patricio Meller..... 10 (1979) 193-199
- Choice* * Maximum score estimation of the stochastic utility model of _____. Charles F. Manski..... 3 (1975) 204-228
- Choice models*
- Empirical estimation of the value of travel time using multi-mode _____. John Kraft and Arthur Kraft..... 2 (1974) 317-326
- Parking location and transit demand: A case study of endogenous attributes in disaggregate mode _____. Richard B. Westin and David W. Gillen..... 8 (1978) 75-101
- Predictions from binary _____. Richard B. Westin..... 2 (1974) 1-16
- Predictions from binary _____. A note. Tony Lancaster..... 9 (1979) 387-389
- Chow test* * Some comparisons of tests for *s* shift in the slopes of a multivariate linear time series model. John U. Farley, Melvin Hinich and Timothy W. McGuire..... 3 (1975) 297-318
- Classification errors* * Regression with a binary independent variable subject to errors of observation. Dennis J. Aigner..... 1 (1973) 49-60
- Closed models* * The construction and estimation of continuous time models and discrete approximations in econometrics. Peter M. Robinson..... 6 (1977) 173-197
- Cobb-Douglas aggregator functions* * On testing separability restrictions with flexible functional forms. Charles Blackorby, Daniel Primont and R. Robert Russell..... 5 (1977) 195-209
- Cobb-Douglas production function*
- A Bayesian estimation of macro and micro CES production functions. Hiroki Tsurumi and Yoshi Tsurumi..... 4 (1976) 1-25
- Rational expectations and the econometric modeling of markets subject to uncertainty: A Bayesian approach. Sanford Grossman..... 3 (1975) 255-272
- The stochastic frontier production function and average efficiency: An empirical analysis. Lung-Fei Lee and William G. Tyler..... 7 (1978) 385-389
- Coefficient estimator, optimal properties of* * The efficiency of an improved method of estimating seemingly unrelated regression equations. V.K. Srivastava..... 1 (1973) 341-350
- Coleman report* * Discrimination in the market for public school teachers. Joseph R. Antos and Sherwin Rosen..... 3 (1974) 123-150
- Combined estimator* * The mean square error of a ____ and numerical comparison with the TLS estimator. Takamitsu Sawa..... 1 (1973) 115-132

- Commuting time* * Labour supply and ____: An empirical study. Terence J. Wales 8 (1978) 215-226
- Complete dynamic simultaneous equation model* * Testing the exogeneity specification in the _____. John Geweke 7 (1978) 163 185
- Complex function* * Determining the final form of a linear dynamic econometric model. Piet de Jong 8 (1978) 181-192
- Complex method* * Efficient estimation of income distribution parameters. Teun Kloek and Herman K. van Dijk 8 (1978) 61-74
- Composite disturbance terms* * Efficient estimation of models with _____. Adrian Pagan 1 (1973) 329-340
- Computation* in simultaneous equation estimation * Information and _____. Warren Dent 4 (1973) 329-340
- Computational competitiveness* * On the ____ of full-information maximum-likelihood and three-stage least-squares in the estimation of nonlinear, simultaneous-equations models. David A. Belsley 9 (1979) 315-342
- Concentration curves, indices* * On the estimation of Engel elasticities from grouped observations with application to Indonesian data. Nanak Kakwani 6 (1977) 1-19
- Concentration-parameter asymptotics* * Some large- ____ for the k -class estimators. Roberto S. Mariano 3 (1975) 171-177
- Conditional distribution*
 Asymptotic properties of a correlation coefficient type statistic connected with the general linear model. Laurens de Haan and Elselien Taconis-Haantjes 7 (1978) 15-21
 On the characterization of a joint probability distribution by _____. Christian Gourieroux and Alain Monfort 10 (1979) 115-118
 The sampling distribution of forecasts from a first-order autoregression. Peter C.B. Phillips 9 (1979) 241-261
- Conditional logit estimation* * Maximum score estimation of the stochastic utility model of choice. Charles F. Manski 3 (1975) 205-228
- Conditional maximum likelihood estimation* * The first-order moving average process: Identification, estimation and prediction. Charles R. Nelson 2 (1974) 121-141
- Conditional maximum likelihood estimator* * Some small sample properties of estimators and test statistics in the multivariate logit model. David K. Guilkey and Peter Schmidt 10 (1979) 33-42
- Confidence distribution* * Some aspects of bivariate regression subject to linear constraints. George C. Tiao and Wei-Yuan Tan 5 (1977) 13 35
- Confidence intervals* * The use of dummy variables to compute predictions, prediction errors, and _____. David S. Salkever 4 (1976) 393 397
- Confidence interval, Bayesian* * Posterior distribution for the multiple correlation coefficients with fixed regressors. S. James Press and Arnold Zellner 8 (1978) 295-306
- Conjectural variations* * Firm interdependence in oligopolistic markets. Frank M. Gollop and Mark J. Roberts 10 (1979) 313-331
- Consistency*
 Estimation of some limited dependent variable models with application to housing demand. Lung-Fei Lee and Robert P. Trost 8 (1978) 357-382
 Local and global identification and strong ____ in time series models. R. Kohn 8 (1978) 269-293
 Maximum score estimation of the stochastic utility model of choice. Charles F. Manski 3 (1975) 205 228
 Regression with a binary independent variable subject to errors of observation. Dennis J. Aigner 1 (1973) 49 60
 Seemingly unrelated nonlinear regressions. A. Ronald Gallant 3 (1975) 35-50
 Some large-concentration-parameter asymptotics for the k -class estimators. Roberto S. Mariano 3 (1975) 171 177
 Three-stage least-squares estimation for a system of simultaneous, nonlinear, implicit equations. A. Ronald Gallant 5 (1977) 71 88

- Consistency and identifiability.* Arne Gabrielsen 8 (1978) 261-263
- Consistent aggregator* * On testing weak separability. Alan D. Woodland 8 (1978) 383-398
- Consistent estimators* * The use of incomplete observations in multiple regression analysis: A generalized least squares approach. Marcel G. Dagenais..... 1 (1973) 317-328
- Constrained estimators* * The existence of moments of some simple Bayes estimators of coefficients in a simultaneous equation model. Jatinder S. Mehta and Paravastu A.V.B. Swamy..... 7 (1978) 1-13
- Consumer demand*
 A comparative study of complete systems of demand functions. N. Anders Klevmarken 10 (1979) 165-191
 On estimation of an econometric model of short-run bank behaviour. Dennis J. Aigner 1 (1973) 201-228
- Consumer intertemporal allocation* * On the consequences of planning interval specification error for the estimation of dynamic models. Roger R. Betancourt..... 6 (1977) 237-242
- Consumer protection movement* * A Bayesian test of a parameter shift and an application. Hiroki Tsurumi 6 (1977) 371-380
- Consumption*
 Bayesian analysis of the Federal Reserve-MIT-Penn model's Almon lag ____ function. Arnold Zellner and Anne D. Williams..... 1 (1973) 267-299
 The allocation of household income to food _____. Saul H. Hymans and Harold T. Shapiro..... 4 (1976) 167-188
- Consumption patterns for electricity.* Wallace Hendricks and Roger Koenker..... 5 (1977) 135-153
- Contemporaneous correlation* * Gains in efficiency from joint estimation of systems of autoregressive moving average processes. Charles R. Nelson..... 4 (1976) 331-348
- Contemporaneous cross-correlation* * The characterization of instantaneous causality. J. Michael Price..... 10 (1979) 253-256
- Contemporaneously correlated error* * The error components model: Conditions for the existence of the maximum likelihood estimators. Korhan Berzeg..... 10 (1979) 99-102
- Continuous time models*
 The construction and estimation of ____ and discrete approximations in econometrics. Peter M. Robinson..... 6 (1977) 173-197
 The problem of identification in finite parameter _____. P.C.B. Phillips. 1 (1973) 351-362
- Control of macroeconomic variables* * Non-interacting ____: Implications on policy mix considerations. Masanao Aoki 2 (1974) 261-281
- Control variates*
 Monte Carlo methodology and the small sample behaviour of ordinary and two-stage least-squares. David F. Hendry and Robin W. Harrison 2 (1974) 151-174
 The behaviour of inconsistent instrumental variables estimators in dynamic systems with autocorrelated errors. David F. Hendry..... 9 (1979) 295-314
- Converse limit* * A note on extraneous information in regression. Richard Brook and T.D. Wallace..... 1 (1973) 315-316
- Correlation:* See also Multiple correlation, serial correlation, etc.
- Correlations with ordinal data.* David M. Grether 2 (1974) 241-246
- Correlation analysis, canonical* * Canonical ridge and econometrics of joint production. H.D. Vinod..... 4 (1976) 147-166
- Correlation coefficient type statistic* * Asymptotic properties of a ____ connected with the general linear model. Laurens de Haan and Elselien Taconis-Haantjes..... 7 (1978) 15-21
- Correlation for simultaneous equation systems* * Coefficients of _____. Richard A.L. Carter and Anirudh L. Nagar..... 4 (1977) 39-50
- Cost frontiers* * Estimating technical and allocative inefficiency relative to stochastic production and _____. Peter Schmidt and C.A. Knox Lovell 9 (1979) 343-366

- Cost function* * Duality theory and pitfalls in the specification of technologies. David F. Burgess 3 (1975) 105-121
- Cost function, dual* * A study of multiple-output production functions: Klein's railroad study revisited. Georg Hasenkamp 4 (1976) 253-262
- Cournot behavior* * Firm interdependence in oligopolistic markets. Frank M. Gollop and Mark J. Roberts 10 (1979) 313-331
- Covariance matrix*
 A note on three-stage squares estimation. Agustin Maravall 4 (1976) 325-330
 Maximum likelihood estimation of the GLS model with unknown parameters in the disturbance _____. Jan R. Magnus 7 (1978) 281-312
 Recursions for the two-stage least-squares estimators. Garry D.A. Phillips 6 (1977) 65-77
- Covariance stationary time series* * Modeling the price side of econometric models: An analysis of the underlying hypotheses. Salih N. Neftci 10 (1979) 71-84
- Criterion functions* * Local and global identification and strong consistency in time series models. R. Kohn 8 (1978) 269-293
- Cross-correlation* * Gains in efficiency from joint estimation of systems of autoregressive moving average processes. Charles R. Nelson 4 (1976) 331-348
- Cross-correlation, contemporaneous* * The characterization of instantaneous causality: A correction. J. Michael Price 10 (1979) 253-256
- Cross-correlation, zero-lag innovations* * The characterization of instantaneous causality: A comment. David A. Pierce and Larry D. Haugh 10 (1979) 257-259
- Cross-equation restrictions* * The structural identifiability of linear models with auto-correlated errors in the case of _____. Manfred Deistler 8 (1978) 23-31
- Cross-section data*
 Discrimination in the market for public school teachers. Joseph R. Antos and Sherwin Rosen 3 (1975) 123-150
 Estimation of a dynamic demand function for gasoline with different schemes of parameter variation. Jatinder S. Mehta, Gorti V.L. Narasimhan and Paravastu A.V.B. Swamy 7 (1978) 263-279
 The translog production function: Some evidence from establishment data. Vittorio Corbo and Patricio Meller 10 (1979) 193-199
- Crossed-error structure* * Estimation of linear models with _____. Wayne A. Fuller and George E. Battese 2 (1974) 67-78
- Cubic spline, periodic* * Consumption patterns for electricity. Wallace Hendricks and Roger Koenker 5 (1977) 135-153
- Decision rule* * Bayesian analysis of optimal sample size and a best _____ for experiments in direct load control. Dennis J. Aigner 9 (1979) 209-221
- Declining block rate structure* * A two-level electricity demand model: Evaluation of the Connecticut time-of-day pricing test. J.A. Hausman, M. Kinnucan and D. McFadden 10 (1979) 263-289
- Decontrol of petroleum* * An econometric model of the petroleum industry. Patricia Rice and V. Kerry Smith 6 (1977) 263-287
- Demand*: See also Residential demand, electricity demand, etc.
- Demand estimation* * A two-level electricity demand model: Evaluation of the Connecticut time-of-day pricing test. J.A. Hausman, M. Kinnucan and D. McFadden 10 (1979) 263-289
- Demand for energy* * The _____ in Canadian manufacturing: An example of the estimation of production structures with many inputs. Melvyn A. Fuss 5 (1977) 89-116
- Demand function(s)*
 A comparative study of complete systems of _____. N. Anders Klevmarken 10 (1979) 165-191

- Estimation of a _____ for gasoline with different schemes of parameter variation. Jatinder S. Mehta, Gorti L. Narasimham and Paravastu A.V.B. Swamy 7 (1978) 263-279
- Demand-supply model* * Estimation in a disequilibrium model and the value of information. Stephen M. Goldfeld and Richard E. Quandt... 3 (1975) 325-348
- Demand systems* * Specification and estimation of dynamic _____ incorporating polynomial price response functions: An application to U.S. clothing imports. J. Stuart McMenamin and Jean-Paul Pinard.. 7 (1978) 147-162
- Dependent variable models*
- Censored regression models with unobserved, stochastic censoring thresholds. Forrest D. Nelson 6 (1977) 309-327
- Estimation of some limited _____ with application to housing demand. Lung-Fei Lee and Robert P. Trost..... 8 (1978) 357-382
- Dependent variables* * Retention of trainees: A study with dichotomous _____. Morley Gunderson..... 2 (1974) 79-93
- Design theory* * Optimal experimental design in econometrics: The time series problem. Panagiotis A. Papakyriazis 7 (1978) 351-372
- Dhrymes 2SLS test* * On testing hypotheses in simultaneous equation models. Alison Morgan and Walter Vandaele 2 (1974) 55-65
- Difference equations* * Least squares and stochastic _____. Bernt P. Stigum..... 4 (1976) 349-370
- Differencing* * Estimation of a non-invertible moving average process: The case of overdifferencing. Charles I. Plosser and G. William Schwert..... 6 (1977) 199-224
- Differencing of random walks and near random walks.* Nichols J. Gonedes and Harry V. Roberts 6 (1977) 289-308
- Diffuse prior distribution*
- Bayesian assessment of the unconditional mean square error of repeated predictions from a regression equation. Nicholas J. Gonedes and Harry V. Roberts 2 (1974) 221-240
- Posterior distributions for the multiple correlation coefficient with fixed regressors. S. James Press and Arnold Zellner..... 8 (1978) 307-321
- Dirichlet distribution* * Stochastic specification and the estimation of share equations. A.D. Woodland 10 (1979) 361-383
- Disaggregate mode choice models* * Parking location and transmit demand: A case study of endogenous attributes in _____. Richard B. Westin and David W. Gillen 8 (1978) 75-101
- Disaggregated data* * Linear regression using both temporally aggregated and temporally _____. Cheng Hsiao 10 (1979) 243-252
- Discounted expected-value models* * Chicago Board call options as predictors of common stock price changes. D. Panton..... 4 (1976) 101-113
- Discrete approximations* * The construction and estimation of continuous time models and _____ in econometrics. Peter M. Robinson..... 6 (1977) 173-197
- Discrete stationary stochastic process* * The use of monthly and quarterly data in an ARMA model. F.A.G. Den Butter..... 4 (1976) 311-324
- Discriminating between autoregressive forms: A Monte Carlo comparison of Bayesian and ad hoc methods.* D.E.A. Giles 3 (1978) 229-248
- Discrimination in the market for public school teachers.* Joseph R. Antos and Sherwin Rosen 3 (1975) 123-150
- Disequilibrium model* * Estimation in a _____ and the value of information. Stephen M. Goldfeld and Richard E. Quandt 3 (1975) 325-348
- Disequilibrium phenomenon* * An econometric model of the Australian economy. C.I. Higgins and V.W. Fitzgerald..... 1 (1973) 229-265
- Distributed lags*
- Harmonic alternatives to the Almon polynomial technique. Susan S. Hamlen and William A. Hamlen, Jr..... 7 (1978) 57-66
- Specification and estimation of dynamic demand systems incorporating polynomial price response functions: An application to U.S. clothing imports. J. Stuart McMenamin and Jean-Paul Pinard 7 (1978) 147-162

- Distributed lag estimators* * Smooth _____ and smoothing spline functions in Hilbert spaces. Corrado Corradi 5 (1977) 211-219
- Distributed lag model*
- Forecasting in dynamic models with stochastic regressors. David A. Pierce 3 (1975) 349-374
- The effect of temporal aggregation on parameter estimation in _____. William W.S. Wei 8 (1978) 237-246
- The effects of various treatments of truncation remainders on tests of hypotheses in _____. Peter Schmidt and David K. Guilkey 4 (1976) 211-230
- Distributed lag model, Koyck* * Discriminating between autoregressive forms: A Monte Carlo comparison of Bayesian and ad hoc methods. D.E.A. Giles 3 (1975) 229-248
- Distribution*
- On the sampling _____ of improved estimators for coefficients in linear regression. Aman Ullah 2 (1974) 143-150
- The _____ of changes in manufacturing employment and the impact of the minimum wage. Noel D. Uri and J. Wilson Mixon 7 (1978) 103-114
- Distribution parameters* * Efficient estimation of income _____. Teun Klock and Herman K. van Dijk 8 (1978) 61-74
- Distribution theory* * On the estimation of the Pareto law from under-reported data. Michael J. Hartley and Nagesh S. Revankar 2 (1974) 327-341
- Disturbances*
- Abrahamse and Koerts' 'new estimators' of disturbances in regression analysis. Heinz Neudecker 5 (1977) 129-133
- Autocorrelated _____ in the light of specification analysis. Maitreyi Chaudhuri (Mukherjee) 5 (1977) 301-313
- FIML estimation of the dynamic simultaneous equation with ARMA _____. Greg Reinsel 9 (1979) 263-281
- Omitted variables, variability of estimated parameters and the appearance of autocorrelated _____. Yash Pal Gupta and Esfandiar Maasoumi 9 (1979) 379-385
- Optimal instruments when the _____ are small. Roger W. Klein 9 (1979) 367-377
- Several efficient two-step estimators for the dynamic simultaneous equations model with autoregressive _____. Michio Hatanaka 4 (1976) 189-204
- Weaker MSE criteria and tests for linear restrictions in regression models with non-spherical _____. Marjorie B. McElroy 6 (1977) 389-394
- Disturbance covariance matrix*
- Estimation of seemingly unrelated regressions with unequal numbers of observations. Peter Schmidt 5 (1977) 365-377
- Maximum likelihood estimation of the GLS model with unknown parameters in the _____. Jan R. Magnus 7 (1978) 281-312
- Disturbance terms*
- Efficient estimation of models with composite _____. Adrian Pagan 1 (1973) 329-340
- Formulation and estimation of stochastic frontier production models. D.J. Aigner, C.A. Knox Lovell and Peter Schmidt 5 (1977) 21-37
- Disturbance vectors* * On typical characteristics of economic time series and the relative qualities of five autocorrelation tests. C. Dubbelman and A.S. Louter 8 (1978) 295-306
- Divisia index* * Testing neoclassical production theory. Elie Appelbaum 7 (1978) 87-102
- Domencich-McFadden method* * On a two-step estimation of a multivariate logit model. Takeshi Amemiya 8 (1978) 13-21
- Dominance* * MSE _____ of least squares with errors-of-observation. Dennis J. Aigner 2 (1974) 364-372
- Dual cost functions*
- A study of multiple-output production functions: Klein's railroad study revisited. Georg Hasenkamp 4 (1976) 253-262
- Technical change in the U.S. primary metals industry. John Wills 10 (1979) 85-98

Duality

- Estimating technical and allocative inefficiency relative to stochastic production and cost frontiers. Peter Schmidt and C.A. Knox Lovell..... 9 (1979) 343-366

Testing neoclassical production theory. Elie Appelbaum..... 7 (1978) 87-102

- The demand for energy in Canadian manufacturing: An example of the estimation of production structures with many inputs. Melvyn A. Fuss..... 5 (1977) 89-116

Duality theory and pitfalls in the specification of technologies. David F. Burgess..... 3 (1975) 105-121

Dummy variables

- A comparative study of finite sample properties of band spectrum regression analysis. Svend Hylleberg..... 5 (1977) 167-182

The use of _____ to compute predictions, prediction errors, and confidence intervals. David S. Salkever..... 4 (1976) 393-397

Durbin estimator

- Estimation in the first-order moving average model through the finite autoregressive approximation: Some asymptotic results. Raul Pedro Mentz..... 6 (1977) 225-236

The first-order moving average process: Identification, estimation and prediction. Charles R. Nelson..... 2 (1974) 121-141

Durbin exact test

- The power of four tests of autocorrelation in the linear regression model. Wilford L. L'Esperance and Daniel Taylor..... 3 (1975) 1-21

Durbin's tests for serial correlation * The small sample bias of _____: When one of the regressors is the lagged dependent variable and the null hypothesis is true. Byron G. Spencer..... 3 (1975) 249-254

Durbin-Watson test

- Autocorrelated disturbances in the light of specification analysis. Maitreyi Chaudhuri (Mukherjee)..... 5 (1977) 301-313

On choosing the optimal level of significance for the _____ and the Bayesian alternative. Thomas B. Fomby and David K. Guilkey..... 8 (1978) 203-213

On the impact of the tests for serial correlation upon the test of significance for the regression coefficient. Alice Nakamura and Masao Nakamura..... 7 (1978) 199-210

On typical characteristics of economic time series and the relative qualities of five autocorrelation tests. C. Dubbelman and A.S. Louter..... 8 (1978) 295-306

The power of four tests of autocorrelation in the linear regression model. Wilford L. L'Esperance and Daniel Taylor..... 3 (1975) 1-21

Dutch manufacturing sector * On Bayesian and non-Bayesian estimation of a two-level CES production function for the _____. Rins Harkema and Sybrand Schim van der Loeff..... 5 (1977) 155-165

Dynamic adjustment model

- A note on an efficient two-step estimator. Phoebus J. Dhrymes..... 2 (1974) 301-304

An efficient two-step estimator for the _____ with autoregressive errors. Michio Hatanaka..... 2 (1974) 199-220

Dynamic autoregressive simultaneous equation models * Asymptotic properties of full information estimators in _____. Phoebus J. Dhrymes and H. Erlat..... 2 (1974) 247-259

Dynamic demand function * Estimation of a _____ for gasoline with different schemes of parameter variation. Jatinder S. Mehta, Gorti V.L. Narasimham and Paravastu A.V.B. Swamy..... 7 (1978) 263-279

Dynamic demand systems * Specification and estimation of _____ incorporating polynomial price response functions: An application to U.S. clothing imports. J. Stuart McMenamin and Jean-Paul Pinard.. 7 (1978) 147-162

Dynamic econometric model * Determining the final form of a linear _____. Piet de Jong..... 8 (1978) 181-192

- Dynamic equation* * Relative efficiencies of some simple Bayes estimators of coefficients in a ____ with serially correlated errors - II. P.A.V.B. Swamy and Paul N. Rappoport..... 7 (1978) 245-258
- Dynamic methodology* * Autocorrelation and ____ with an application to wage determination models. Lloyd R. Kenward 3 (1975) 179-187
- Dynamic models*
 A class of ____ for describing and projecting industrial development. Richard H. Day and Jon P. Nelson 1 (1973) 155-190
 Forecasting in ____ with stochastic regressors. David A. Pierce 3 (1975) 349-374
 On the consequences of planning interval specification error for the estimation of _____. Roger Betancourt..... 6 (1977) 237-242
 Relative efficiencies of some simple Bayes estimators of coefficients in ____ - I. P.A.V.B. Swamy and Paul N. Rappoport 3 (1975) 273-296
- Dynamic multipliers* * Polynomial operators and the asymptotic distribution of _____. Leonard Gill and Sophocles N. Brissimis 7 (1978) 373-384
- Dynamic optimization model* * Option values, stipends, and the returns to educational investment. Yochanan P. Comay, Arie Melnik and Moshe A. Pollatschek..... 6 (1977) 243-260
- Dynamic simulation* * Local and global identification and strong consistency in time series models. R. Kohn 8 (1978) 269-293
- Dynamic simultaneous equations model*
 FIML estimation of the ____ with ARMA disturbances. Greg Reinsel . Several efficient two-step estimators for the ____ with autoregressive disturbances. Michio Hatanaka 9 (1979) 263-281
 4 (1976) 189-204
 Testing the exogeneity specification in the complete _____. John Geweke..... 7 (1978) 163-185
 Time series analysis and simultaneous equation econometric models. Arnold Zellner and Franz Palm..... 2 (1974) 17-54
- Dynamic system of seemingly unrelated regressions* * Estimation of a ____ with autoregressive disturbances. David E. Spencer 10 (1979) 227-241
- Dynamic systems with autocorrelated errors* * The behaviour of inconsistent instrumental variables estimators in _____. David F. Hendry... 9 (1979) 295-314
- Earnings* * Federally subsidized occupational training and the employment and ____ of male trainees. Nicholas M. Kiefer 8 (1978) 111-125
- Economic time series*
 Experience with using the Box-Cox transformation when forecasting _____. Harold L. Nelson, Jr. and C.W.J. Granger 10 (1979) 57-69
 On typical characteristics of ____ and the relative qualities of five autocorrelation tests. C. Dubbelman, A.S. Louter and A.P.J. Abrahamse..... 8 (1978) 295-306
- Econometrics*
 A classified bibliography of Monte Carlo studies in _____. Eric R. Sowe..... 1 (1973) 377-395
 Canonical ridge and ____ of joint production. H.D. Vinod..... 4 (1976) 147-166
 Optimal experimental design in ____: The time series problem. Panagiotis A. Papakyziazis 7 (1978) 351-372
 Spurious regressions in _____. C.W.J. Granger and P. Newbold 2 (1974) 111-120
 The construction and estimation of continuous time models and discrete approximations in _____. Peter M. Robinson..... 6 (1977) 173-197
- Econometric model(s)*
 An ____ of the Australian economy. C.I. Higgins and V.W. Fitzgerald. 1 (1973) 229-265
 An ____ of the petroleum industry. Patricia Rice and V. Kerry Smith.. 6 (1977) 263-287
 Determining the final form of a linear dynamic _____. Piet de Jong..... 8 (1978) 181-192
 Firm interdependence in oligopolistic markets. Frank M. Gollop and Mark J. Roberts 10 (1979) 313-331

- Modeling the price side of ____: An analysis of the underlying hypotheses. Salih N. Nefci 10 (1979) 71-84
- On estimation of an ____ of short-run bank behaviour. Dennis J. Aigner 1 (1973) 201-228
- On univariate time series methods and simultaneous equation ____ Franz Palm 5 (1977) 379-388
- Testing neoclassical production theory. Elie Appelbaum 7 (1978) 87-102
- Testing unstable ____ for stability: An empirical study. Elizabeth F. Gustafson 8 (1978) 193-201
- The reconstruction of index data in aggregative ____ Dit Sang Ho 10 (1979) 333-359
- Time series analysis and simultaneous equation ____ Arnold Zellner and Franz Palm 2 (1974) 17-54
- Econometric modeling* * Rational expectations and ____ of markets subject to uncertainty: A Bayesian approach. Sanford Grossman 3 (1975) 255-272
- Econometric techniques* * Federally subsidized occupational training and the employment and earnings of male trainees. Nicholas M. Kiefer 8 (1978) 111-125
- Edgeworth expansion* * An approximation to the finite sample distribution of Zellner's seemingly unrelated regression estimator. Peter C.B. Phillips 6 (1977) 147-164
- Education* * Discrimination in the market for public school teachers. Joseph R. Antos and Sherwin Rosen 3 (1975) 123-150
- Education, income and ability revisited*. Gary Chamberlin 5 (1977) 241-257
- Educational investment* * Option values, stipends and the returns to ____ Yochanan P. Comay, Arie Melnik and Moshe A. Pollatschek . 6 (1977) 243-260
- Efficiencies of some simple Bayes estimators*
- Relative ____ of coefficients in dynamic models - I. P.A.V.B. Swamy and Paul N. Rappoport 3 (1975) 273-296
- Relative ____ of coefficients in a dynamic equation with serially correlated errors - II. P.A.V.B. Swamy and Paul N. Rappoport 7 (1978) 245-258
- Efficiency*
- Gains in ____ from joint estimation of systems of autoregressive-moving average processes. Charles R. Nelson 4 (1976) 331-348
- The effect of temporal aggregation on parameter estimation in distributed lag models. William W.S. Wei 8 (1978) 237-246
- The ____ of an improved method of estimating seemingly unrelated regression equations. V.K. Srivastava 1 (1973) 341-350
- The stochastic frontier production function and average ____: An empirical analysis. Lung-Fei Lee and William G. Tyler 7 (1978) 383-389
- Efficient estimation*
- Estimation of seemingly unrelated regressions with unequal numbers of observations. Peter Schmidt 5 (1977) 365-377
- On the ____ methods for the macro-economic models nonlinear in variables. Michio Hatanaka 8 (1978) 323-356
- Efficient estimation of models with composite disturbance terms*. Adrian Pagan 1 (1973) 329-340
- Efficient estimation procedures, asymptotically* * The construction and estimation of continuous time models and discrete approximations in econometrics. Peter M. Robinson 6 (1977) 173-197
- Eigenvalues* * Best quadratic unbiased estimators of the variance-covariance matrix in normal regression. Pietro Balestra 1 (1973) 17-28
- Elasticities*
- A new method of estimating Engel ____ Nanak Kakwani 8 (1978) 103-110
- On the estimation of Engel ____ from grouped observations with application to Indonesian data. Nanak Kakwani 6 (1977) 1-19
- Elasticity of substitution*
- Estimation of the ____ in the presence of errors of measurement. Grant M. Scobie and Paul R. Johnson 3 (1975) 51-56

- The existence of a real value-added function in the Canadian manufacturing sector. Michael Denny and Doug May..... 5 (1977) 55-69
- Elasticity, short-run; long-run* * Inconsistency of the OLS estimator of the partial adjustment-adaptive expectations model. H.E. Doran and W.E. Griffiths..... 7 (1978) 133-146
- Electricity* * Consumption patterns for _____. Wallace Hendricks and Roger Koenker..... 5 (1977) 135-153
- Electricity demand*
- A mixed time-series/econometric approach to forecasting peak system load. Noel D. Uri..... 9 (1979) 155-171
- A two-level ____ model: Evaluation of the Connecticut time-of-day pricing test. J.A. Hausman, M. Kinnucan and D. McFadden..... 10 (1979) 263-289
- An approach to modeling seasonally stationary time series. Emanuel Parzen and Marcello Pagano..... 9 (1979) 137-153
- Bayesian analysis of optimal sample size and a best decision rule for experiments in direct load control. Dennis J. Aigner..... 9 (1979) 209-221
- Econometric estimation of peak electricity demand. Robert M. Spann and Edward C. Beauvais..... 9 (1979) 97-115
- Modelling and forecasting time-of-day and seasonal _____. Annals of Applied Econometrics (edited by A. Lawrence and D. Aigner)..... 9 (1979) 1-240
- On modelling the residential demand for electricity by time-of-day. Lester D. Taylor..... 9 (1979) 97-115
- Optimal peak load pricing with time-additive consumer preferences. Roger Koenker..... 9 (1979) 175-192
- Residential demand for electricity: An econometric approach. Wallace Hendricks and Roger Koenker..... 9 (1979) 33-57
- Residential load curves and time-of-day pricing: An econometric analysis. C.W.J. Granger, Robert Engle, Ramu Ramanathan and Allan Andersen..... 9 (1979) 13-32
- Responsiveness to time-of-day electricity pricing: First empirical results. Scott E. Atkinson..... 9 (1979) 79-95
- The residential demand for electricity with time-of-day pricing. Anthony Lawrence..... 9 (1979) 59-77
- Theoretical determinants of the industrial demand for electricity by time of day. John C. Panzar and Robert D. Willig..... 9 (1979) 193-207
- Employment*
- Federally subsidized occupational training and the ____ and earnings of male trainees. Nicholas M. Kiefer..... 8 (1978) 111-125
- The distribution of changes in manufacturing ____ and the impact of the minimum wage. Noel D. Uri and J. Wilson Mixon..... 7 (1978) 103-114
- Endogeneity of monetary policy* * A test of the _____. Richard T. Froyen.. 2 (1974) 175-188
- Endogenous attributes* * Parking location and transit demand: A case study of ____ in disaggregate mode choice models. Richard B. Westin and David W. Gillen..... 8 (1978) 75-101
- Endogenous structure* * Market analysis with rational expectations: Theory and estimation. R. LaVar Huntzinger..... 10 (1979) 127-145
- Engel curve* * The allocation of household income to food consumption. Saul H. Hymans and Harold T. Shapiro..... 4 (1976) 167-188
- Engel elasticities*
- A new method of estimating _____. Nanak Kakwani..... 8 (1978) 103-110
- On the estimation of ____ from grouped observations with application to Indonesian data. Nanak Kakwani..... 6 (1977) 1-19
- Errors* * An efficient two-step estimator for the dynamic adjustment model with autoregressive _____. Michio Hatanaka..... 2 (1974) 199-220
- Error components model* * The _____. Conditions for the existence of the maximum likelihood estimates. Korhan Berzeg..... 10 (1979) 99-102
- Error distribution, one-parameter* * On the estimation of the Pareto law from under-reported data. Michael J. Hartley and Nagesh S. Revankar..... 2 (1974) 327-341

Errors-in-variables

- A new class of limited-information estimators for simultaneous equation systems. Wouter J. Keller..... 3 (1975) 71-92

- Identification of simultaneous equation models with measurement error. Vincent J. Geraci..... 4 (1974) 263-283

- Errors in variables* in simultaneous equation models. Jerry A. Hausman... 5 (1977) 389-401

- Error loss* * A Monte Carlo comparison of traditional and Stein-rule estimators under squared _____. Thomas A. Yancey and George C. Judge..... 4 (1976) 285-294

- Errors of measurement* * Estimation of the elasticity of substitution in the present of _____. Grant M. Scobie and Paul R. Johnson 3 (1975) 51-56

Errors-of-observation

- MSE dominance of least squares with _____. Dennis J. Aigner..... 2 (1974) 365-372

- Regression with a binary independent variable subject to _____. Dennis J. Aigner 1 (1973) 49-60

- Error process* * Autocorrelation and dynamic methodology with an application to wage determination models. Lloyd R. Kenward..... 3 (1975) 179-187

- Error specification* * Alternative tests for a first-order vector autoregressive _____. David K. Guilkey 2 (1974) 95-104

- Error structure* * Estimation of linear models with crossed-_____. Wayne A. Fuller and George E. Battese..... 2 (1974) 67-78

Error terms

- A Bayesian test of a parameter shift and an application. Hiroki Tsurumi..... 6 (1977) 371-380

- The stochastic frontier production function and average efficiency: An empirical analysis. Lung-Fei Lee and William G. Taylor..... 7 (1978) 383-389

- Error term, variance of* * A note on a heteroscedastic model. Takeshi Amemiya 6 (1977) 365-370

- Error variance* * Estimation with aggregated data. R.W. Farebrother 10 (1979) 43-55

- Error vectors* * Testing the exogeneity specification in the complete dynamic simultaneous equation model. John Geweke..... 7 (1978) 163-185

- Estimated parameters* * Omitted variables, variability of ____ and the appearance of autocorrelated disturbances. Yash Pal Gupta and Esfandiar Maasoumi..... 9 (1979) 379-385

Estimation

- A note on the ____ of seemingly unrelated regression systems. Peter Schmidt..... 7 (1978) 259-261

- Efficient ____ of income distribution parameters, Teun Kloek and Herman K. van Dijk 8 (1978) 61-74

- Efficient ____ of models with composite disturbance terms. Adrian Pagan..... 1 (1973) 329-340

- On ____ of an econometric model of short-run bank behaviour. Dennis J. Aigner..... 1 (1973) 201-228

- On the ____ of Engel elasticities from grouped observations with application to Indonesian data. Nanak Kakwani 6 (1977) 1-19

- Specification and ____ of dynamic demand systems incorporating polynomial price response functions: An application to U.S. clothing imports. J. Stuart McMenamin and Jean-Paul Pinard 7 (1978) 147-162

- Some comments on ____ in regression after preliminary tests of significance. M.E. Bock, G.C. Judge and T.A. Yancey..... 1 (1973) 191-200

- Stochastic specification and the ____ of share equations. A.D. Woodland 10 (1979) 361-383

- The construction and ____ of continuous time models and discrete approximations in econometrics. Peter M. Robinson 6 (1977) 173-197

- The demand for energy in Canadian manufacturing: An example of the ____ of production structures with many inputs. Melvyn A. Fuss..... 5 (1977) 89-116

- The ____ of a family of measures of economic inequality. Joseph L. Gastwirth 3 (1975) 61-70

- Three-stage least-squares — for a system of simultaneous, non-linear, implicit equations. A. Ronald Gallant 5 (1977) 71-88
- Estimation and testing for functional form and autocorrelation: A simultaneous approach.* N.E. Savin and Kenneth J. White 8 (1978) 1-12
- Estimation in the first-order moving average model through the finite autoregressive approximation: Some asymptotic results.* Raul Pedro Mentz 6 (1977) 225-236
- Estimation of a dynamic system of seemingly unrelated regressions with autoregressive disturbances.* David E. Spencer 10 (1979) 227-241
- Estimation of a model containing unobservable variables using grouped observations: An application to the permanent income hypothesis.* Clifford L.F. Attfield 6 (1977) 51-63
- Estimation of a non-invertible moving average process: The case of overdifferencing.* Charles I. Plosser and G. William Schwert 6 (1977) 199-224
- Estimation of common coefficients in two regression equations.* P.A.V.B. Swamy and J.S. Mehta 10 (1979) 1-14
- Estimation of functions of population means and regression coefficients including structural coefficients: A minimum expected loss (MELO) approach.* Arnold Zellner 8 (1978) 127-158
- Estimation of seemingly unrelated regression equations: A brief survey.* V.K. Srivastava and T.D. Dwivedi 10 (1979) 15-32
- Estimation of seemingly unrelated regressions with unequal numbers of observations.* Peter Schmidt 5 (1977) 365-371
- Estimation of some limited dependent variable models with application to housing demand.* Lung-Fei Lee and Robert P. Trost 8 (1978) 357-383
- Estimation of the elasticity of substitution in the presence of errors of measurement.* Grant M. Scobie and Paul R. Johnson 3 (1975) 51-56
- Estimation of the Pareto law from underreported data: A further analysis.* David V. Hinkley and Nagesh S. Revankar 5 (1977) 1-11
- Estimation with aggregated data.* R.W. Farebrother 10 (1979) 43-55
- Estimation accuracy * Optimal experimental design in econometrics: The time series problem.* Panagiotis A. Papakyzias 7 (1978) 351-372
- Estimation and prediction * The first-order moving average process: Identification.* Charles R. Nelson 2 (1974) 121-141
- Estimation methods * On the efficient — for the macro-economic models nonlinear in variables.* Michio Hatanaka 8 (1978) 323-356
- Estimators*
- A Monte Carlo comparison of traditional and Stein-rule — under squared error loss. Thomas A. Yancey and George G. Judge 4 (1976) 285-294
- Properties of — after preliminary tests of significance when stochastic restrictions are used in regression. G.G. Judge, T.A. Yancey and M.E. Bock 1 (1973) 29-48
- Relative efficiencies of some simple Bayes — of coefficients in dynamic models - I. P.A.V.B. Swamy and Paul N. Rappoport 3 (1975) 273-296
- Relative efficiencies of some simple Bayes — of coefficients in a dynamic equation with serially correlated errors - II. P.A.V.B. Swamy and Paul N. Rappoport 7 (1978) 245-258
- Several efficient two-step — for the dynamic simultaneous equations model with autoregressive disturbances. Michio Hatanaka 4 (1976) 189-204
- Some small sample properties of — and test statistics in the multivariate logit model. David K. Guilkey and Peter Schmidt 10 (1979) 33-42
- The existence of moments of some simple Bayes — of coefficients in a simultaneous equation model. Jatinder S. Mehta and P.A.V.B. Swamy 7 (1978) 1-13
- Estimator generating equation * The structure of simultaneous equations estimators.* David F. Hendry 4 (1976) 51-88
- Exact and superlative index numbers.* W.E. Diewert 4 (1976) 115-145

Exact moments

- On the sampling distribution of improved estimators for coefficients in linear regression. Aman Ullah 2 (1974) 143-150
- The _____ of the least squares estimator for the autoregressive model. Takamitsu Sawa 8 (1978) 159-172

Existence of moments * The _____ of some simple Bayes estimators of coefficients in a simultaneous equation model. Jatinder S. Mehta and Paravastu A.V.B. Swamy.....

7 (1978) 1-13

Exogeneity specification * Testing the _____ in the complete dynamic simultaneous equation model. John Geweke.....

7 (1978) 163-185

Exogenous structure * Market analysis with rational expectations: Theory and estimation. R. LaVar Huntzinger.....

10 (1979) 127-145

Expansion data * Measurement of the purchasing power of incomes with linear _____. S.N. Afriat

2 (1974) 343-364

Expectations * Rational _____ and the econometric modeling of markets subject to uncertainty: A Bayesian approach. Sanford Grossman.....

3 (1975) 255-272

Expectations generating formulae * Retail inventory investment behaviour. P.K. Trivedi.....

1 (1973) 61-80

Expected-value models, discounted * Chicago Board call options as predictors of common stock price changes. D. Panton.....

4 (1976) 101-113

Experimental design

Optimal _____ in econometrics: The time series problem. Panagiotis A. Papakyrizakis

7 (1978) 351-372

The power of four tests of autocorrelation in the linear regression model. Wilford L. L'Esperance and Daniel Taylor.....

3 (1975) 1-21

Extraneous information * A note on _____ in regression. Richard Brook and T.D. Wallace.....

1 (1973) 315-316

F-distribution * Generalized variance-ratio tests for serial correlation in multivariate regression models. Jerzy Szroeter.....

8 (1978) 47-59

F-statistic * Goodness of fit for seemingly unrelated regressions: Glahn's $R^2_{y,x}$ and Hooper's $\bar{r}^2$. Marjorie B. McElroy.....

6 (1977) 381-387

Factor augmentation rates * Technical change in the U.S. primary metals industry. John Wills.....

10 (1979) 85-98

Fair-Jaffee model * A Markov model for switching regressions. Stephen M. Goldfeld and Richard E. Quandt.....

1 (1973) 3-16

Federal Reserve

A test of the endogeneity of monetary policy. Richard T. Froyen.....

2 (1974) 175-188

On estimation of an econometric model of short-run bank behaviour. Dennis J. Aigner

1 (1973) 201-228

Bayesian analysis of the _____-MIT-Penn model's Almon lag consumption function. Arnold Zellner and Anne D. Williams

1 (1973) 267-299

Filtering procedures, ad hoc * Causality in temporal systems: Characterizations and a survey. David A. Pierce and Larry D. Haugh.....

5 (1977) 265-293

FIML: See also Full information maximum likelihood

FIML estimation of the dynamic simultaneous equations model with ARMA disturbances. Greg Reinsel.....

9 (1979) 263-281

Final equations * On univariate time series methods and simultaneous equation econometric models. Franz Palm.....

5 (1977) 379-388

Final form * Determining the _____ of a linear dynamic econometric model. Piet de Jong.....

8 (1978) 181-192

Finite autoregressive approximation * Estimation in the first-order moving average model through the _____. Some asymptotic results. Raul Pedro Mentz

6 (1977) 225-236

Finite distributed lags * Rational and polynomial lags: The finite connection. Adrian Pagan.....

8 (1978) 247-254

- Finite parameter* * The problem of identification in ____ continuous time models. P.C.B. Phillips..... 1 (1973) 351-362
- Finite sample distribution* * An approximation to the ____ of Zellner's seemingly unrelated regression estimator. Peter C.B. Phillips 6 (1977) 147-164
- Finite sample properties*
- A comparative study of ____ of band spectrum regression estimators. Svend Hylleberg..... 5 (1977) 167-182
- Estimation of functions of population means and regression coefficients including structural coefficients: A minimum expected loss (MELO) approach. Arnold Zellner 8 (1978) 127-158
- Monte Carlo methodology and the small sample behaviour of ordinary and two-stage least-squares. David F. Hendry and Robin W. Harrison 2 (1974) 151-174
- Testing for multiplicative heteroskedasticity. Leslie G. Godfrey..... 8 (1978) 227-236
- The existence of moments of some simple Bayes estimators of coefficients in a simultaneous equation model. Jatinder S. Mehta and Paravastu A.V.B. Swamy..... 7 (1978) 1-13
- The mean square error of a combined estimator and numerical comparison with the TSLS estimator. Takamitsu Sawa..... 1 (1973) 115-132
- Firm interdependence* in oligopolistic markets. Frank M. Gollop and Mark J. Roberts 10 (1979) 313-331
- First order autoregression* * The sampling distribution of forecasts from a _____. Peter C.B. Phillips..... 9 (1979) 241-261
- First order autoregressive process* * Estimation and testing for functional form and autocorrelation: A simultaneous approach. N.E. Savin and Kenneth J. White 8 (1978) 1-12
- First order identification* in linear models. Alain Monfort..... 7 (1978) 333-350
- First order moving average* * Inconsistency of the OLS estimator of the partial adjustment-adaptive expectations model. H.E. Doran and W.E. Griffiths 7 (1978) 133-146
- First order moving average model* * Estimation in the ____ through the finite autoregressive approximation: Some asymptotic results. Raul Pedro Mentz 6 (1977) 225-236
- First order moving average process* * The ____: Identification, estimation and prediction. Charles R. Nelson..... 2 (1974) 121-141
- First order vector autoregressive error specification* * Alternative tests for a _____. David K. Guilkey 2 (1974) 95-104
- Fiscal policy instruments* * The relative impact of monetary and ____: Some structure-based estimates. B.T. McCallum..... 2 (1974) 283-299
- Fitting-of-constants methods* * Estimation of linear models with crossed-error structure. Wayne A. Fuller and George E. Battese..... 2 (1974) 67-78
- Fixed regressors* * Posterior distribution for the multiple correlation coefficient with _____. S. James Press and Arnold Zellner..... 8 (1978) 307-321
- Flexible functional forms*
- On testing separability restrictions with _____. Charles Blackorby, Daniel Primont and R. Robert Russell..... 5 (1977) 195-209
- On testing weak separability. Alain D. Woodland..... 8 (1978) 383-398
- On the flexibility of ____: An empirical approach. Terence J. Wales..... 5 (1977) 183-193
- Flexible utility function* * Estimating U.S. consumer preferences for meat with a _____. Laurits R. Christensen and Marilyn E. Manser..... 5 (1977) 37-53
- FMP econometric model* * Gains in efficiency from joint estimation of systems of autoregressive moving average processes. Charles R. Nelson..... 4 (1976) 331-348
- Food consumption* * The allocation of household income to _____. Saul H. Hymans and Harold T. Shapiro 4 (1976) 167-188
- Forecasting*
- A simultaneous equations system of money demand and supply using generalized functional forms. John J. Spitzer 5 (1977) 117-128

- Consumption patterns for electricity _____. Wallace Hendricks and Roger Koenker 5 (1977) 135-153
- Experience with using the Box-Cox transformation when ____ economic time series. Harold L. Nelson, Jr. and C.W.J. Granger 10 1979 57-69
- Modelling and ____ time-of-day and seasonal electricity demands. Annals of Applied Econometrics (edited by A. Lawrence and D. Aigner) 9 (1979) 1-240
- Prediction in the context of the variance-components model. Allan J. Taub 10 (1979) 103-107
- Forecasting aggregates of independent ARIMA processes.* David E. Rose. 5 (1977) 323-345
- Forecasting in dynamic models with stochastic regressors.* David A. Pierce 3 (1975) 349-374
- Forecasts*
- The bias and mean squared error of ____ from partially restricted reduced form. Anirudh L. Nagar and Surendra N. Sahay 7 (1978) 227-243
- The sampling distribution of ____ from a first-order autoregression. Peter C.B. Phillips 9 (1979) 241-261
- Forward regression* * Measurement errors and bounded OLS estimates. Maurice D. Levi 6 (1977) 165-171
- Fourier transform algorithm* * Determining the final form of a linear dynamic econometric model. Piet de Jong 8 (1978) 181-192
- Fourth-order autocorrelation* * Further significance points for the Wallis test: _____. D.E.A. Giles and M.L. King 8 (1978) 255-259
- Frequency characteristics* * Determining the final form of a linear dynamic econometric model. Piet de Jong 8 (1978) 181-192
- Frequency distribution of probabilities, relative* * Predictions from binary choice models. Richard B. Westin 2 (1974) 1-16
- Frontier production function(s)*
- Formulation and estimation of stochastic ____ models. Dennis Aigner, C.A. Knox Lovell and Peter Schmidt 6 (1977) 21-37
- The stochastic ____ and average efficiency: An empirical analysis. Lung-Fei Lee and William G. Tyler 7 (1978) 385-389
- Full information estimation method* * On the efficient estimation methods for the macro-economic models nonlinear in variables. Michio Hatanaka 8 (1978) 323-356
- Full information estimators* * Asymptotic properties of ____ in dynamic autoregressive simultaneous equation models 2 (1974) 247-259
- Full information maximum likelihood* * On the computational competitiveness of ____ and three-stage least-squares in the estimation of nonlinear, simultaneous-equations models. David A. Belsley 9 (1979) 315-342
- Full information maximum likelihood estimation*
- A simultaneous equations system of money demand and supply using generalized functional forms. John J. Spitzer 5 (1977) 117-128
- Errors in variables in simultaneous equation models. Jerry A. Hausman 5 (1977) 389-401
- Several efficient two-step estimators for the dynamic simultaneous equations model with autoregressive disturbances. Michio Hatanaka. 4 (1976) 189-204
- Full information maximum likelihood estimator*
- K-matrix-class estimators and the ____ as a special case. Werner Scharf 4 (1976) 41-50
- The structure of simultaneous equations estimators. David F. Hendry... 4 (1976) 51-88
- Full maximum likelihood estimation* of second-order autoregressive error models. Charles M. Beach and James G. MacKinnon 7 (1978) 187-198
- Functional analysis* * Smooth distributed lag estimators and smoothing spline functions in Hilbert spaces. Corrado Corradi 5 (1977) 211-219
- Functional forms*
- A simultaneous equations system of money demand and supply using generalized _____. John J. Spitzer 5 (1977) 117-128

- Duality theory and pitfalls in the specification of technologies. David F. Burgess 3 (1975) 105-121
- Exact and superlative index numbers. W.E. Diewert..... 4 (1976) 115-145
- Functional form and autocorrelation* * Estimation and testing for ____:
A simultaneous approach. N.E. Savin and Kenneth J. White..... 8 (1978) 1-12
- Functional misspecification* * Testing for ____ in regression analysis.
Andrew C. Harvey and Patrick Collier 6 (1977) 103-119
- Gauss-Markov estimator* * A note on least squares estimation and the BLUE in a generalized linear regression model. Peter Schonfeld..... 3 (1975) 189-197
- Geary test* *
On the impact of the tests for serial correlation upon the test of significance for the regression coefficient. Alice Nakamura and Masao Nakamura 7 (1978) 199-210
- Testing for functional misspecification in regression analysis. Andrew C. Harvey and Patrick Collier..... 6 (1977) 103-119
- General equilibrium models* * Chicago Board call options as predictors of common stock price changes. D. Panton..... 4 (1976) 101-113
- General linear model* * Asymptotic properties of a correlation coefficient type statistic connected with the _____. Laurens de Haan and Elselien Taconis-Haantjes..... 7 (1978) 15-21
- General stochastic restricted regression model* * Properties of estimators after preliminary tests of significance when stochastic restrictions are used in regression. G.G. Judge, T.A. Yancey and M.E. Bock 1 (1973) 29-48
- Generalized functional forms* * A simultaneous equations system of money demand and supply using _____. John J. Spitzer..... 5 (1977) 117-128
- Generalized least squares*
A note on a heteroscedastic model. Takeshi Amemiya 6 (1977) 363-370
- Single-equation estimators and aggregation restrictions when equations have the same sets of regressors. Frank T. Denton 8 (1978) 173-179
- Generalized least squares approach* * The use of incomplete observations in multiple regression analysis: A _____. Marcel G. Dagenais..... 1 (1973) 317-328
- Generalized Leontief function* * Testing price taking behavior. Elie Appelbaum..... 9 (1979) 283-294
- Generalized linear regression* * A note on least squares estimation and the BLUE in a ____ model. Peter Schonfeld 3 (1975) 189-197
- Generalized variance-ratio tests* for serial correlation in multivariate regression models. Jerzy Szroeter..... 8 (1978) 47-59
- Geometric lag models* * The effects of various treatments of truncation remainders on tests of hypotheses in distributed lag models. Peter Schmidt and David K. Guilkey..... 4 (1976) 211-230
- Girshik-Haavelmo model* * The graph of the k -class estimator: An algebraic and statistical interpretation. R.W. Farebrother and N.E. Savin 2 (1974) 373-388
- Glahn's R^2_{yx}* * Goodness of fit for seemingly unrelated regressions: ____ and Hooper's $\bar{r}^2$. Marjorie B. McElroy..... 6 (1977) 381-387
- Glejser method, modified* * A note on a heteroscedastic model. Takeshi Amemiya 6 (1977) 365-370
- Global identifiability* * The structural identifiability of linear models with autocorrelated errors in the case of cross-equation restrictions. Manfred Diestler 8 (1978) 23-31
- Global identification* * Local and ____ and strong consistency in time series models. R. Kohn 8 (1978) 269-293
- GLS*: See also Generalized least squares
- GLS estimation*
Consumption patterns for electricity. Wallace Hendricks and Roger Koenker..... 5 (1977) 135-153

- Estimation of linear models with cross-error structure. Wayne A. Fuller and George E. Battese 2 (1974) 67-78
- Regression using mixed annual and quarterly data. Christopher L. Gilbert 5 (1977) 221-239
- GLS model* * Maximum likelihood estimation of the ____ with unknown parameters in the disturbance covariance matrix. Jan R. Magnus 7 (1978) 281-312
- Goldfeld-Quandt D-method* * A Markov model for switching regressions. Stephen M. Goldfeld and Richard E. Quandt 1 (1973) 3-16
- Goldfeld-Quandt test* * A comparison of the power of some tests for heteroskedasticity in the general linear model. A.C. Harvey and G.D.A. Phillips 2 (1974) 307-316
- Goodness-of-fit*
- A comparative study of complete systems of demand functions. N. Anders Klevmarken 10 (1979) 165-191
- Hypothesis testing based on ____ in the moving average time series model. Charles R. Nelson and Gary S. Shea 10 (1979) 221-226
- Posterior distribution for the multiple correlation coefficient with fixed regressors. S. James Press and Arnold Zellner 8 (1978) 307-321
- Goodness-of-fit* for seemingly unrelated regressions: Glahn's $R^2_{x,x}$ and Hooper's $\bar{r}^2$. Marjorie B. McElroy 6 (1977) 381-387
- Goodness-of-fit* in the seemingly unrelated regressions model: A generalization. A. Buse 10 (1979) 109-113
- Granger* * On a lemma associated with Box, Jenkins, and _____. O.D. Anderson 3 (1975) 151-156
- Granger definition of causality* * Causality in temporal systems: Characterizations and a survey. David A. Pierce and Larry D. Haugh 5 (1977) 254-293
- Grouped data*
- Estimation with aggregated data. R.W. Farebrother 10 (1979) 43-55
- The estimation of a family of measures of economic inequality. Joseph L. Gastwirth 3 (1975) 61-70
- Grouped observations*
- Estimation of a model containing unobserved variables using ____: An application to the permanent income hypothesis. Clifford L.F. Attfield 6 (1977) 51-63
- On the estimation of Engel elasticities from ____ with application to Indonesian data. Nanak Kakwani 6 (1977) 1-19
- Haavelmo model* * Time series analysis and simultaneous equation econometric models. Arnold Zellner and Franz Palm 2 (1974) 17-54
- Harmonic alternatives* to the Almon polynomial technique. Susan S. Hamlen and William A. Hamlen, Jr. 7 (1978) 57-66
- Hermite polynomials* * The use of R^2 to determine the appropriate transformation of regression variables. C.W.J. Granger and P. Newbold 4 (1976) 205-210
- Heteroscedastic model* * A note on a _____. Takeshi Amemiya 6 (1977) 365-370
- Heteroskedasticity*
- A comparison of the power of some tests for ____ in the general linear model. A.C. Harvey and G.D.A. Phillips 2 (1974) 307-316
- Testing for multiplicative _____. Leslie G. Godfrey 8 (1978) 227-236
- Hildreth-Houck estimator*
- A note on a heteroscedastic model. Takeshi Amemiya 6 (1977) 365-370
- Bayesian estimation of a random coefficient model. William E. Griffiths, Ross G. Drynan and Surekha Prakash 10 (1979) 201-220
- Hilbert spaces*
- On the structure of moving average processes. Craig F. Ansley, W. Allen Spivey and William J. Wroblewski 6 (1977) 121-134

- Smooth distributed lag estimators and smoothing spline functions in _____. Corrado Corradi..... 5 (1977) 211-219
- Homogeneity* * Estimation of variance after a preliminary test of ____ and optimal levels of significance for the pre-test. T. Toyoda and T.D. Wallace 3 (1975) 395-404
- Homogeneity restrictions* * Firm interdependence in oligopolistic markets. Frank M. Gollop and Mark J. Roberts..... 10 (1979) 313-331
- Homothetic separability* * The demand for energy in Canadian manufacturing: An example of the estimation of production structures with many inputs. Melvyn A. Fuss..... 5 (1977) 89-116
- Hooper's coefficient* * Coefficients of correlation for simultaneous equation systems. Richard A. L. Carter and Anirudh L. Nagar 6 (1977) 39-50
- Hooper's $\bar{r}^2$* * Goodness of fit for seemingly unrelated regressions: Glahn's $R^2_{y,x}$ and _____. Marjorie B. McElroy 6 (1977) 381-387
- Household demand model* * A two-level electricity demand model: Evaluation of the Connecticut time-of-day pricing test. J.A. Hausman, M. Kinnucan and D. McFadden 10 (1979) 263-289
- Household income* * The allocation of ____ to food consumption. Saul H. Hymans and Harold T. Shapiro 4 (1976) 167-188
- Household production function model* * Estimation of a dynamic demand function for gasoline with different schemes of parameter variation. Jatinder S. Mehta, Orti V.L. Narasimham and Paravastu A.V.B. Swamy 7 (1978) 263-279
- Householder transformation* * Information and computation in simultaneous equations estimation. Warren Dent 4 (1976) 89-95
- Housing demand* * Estimation of some limited dependent variable models with application to _____. Lung-Fei Lee and Robert P. Trost 8 (1978) 357-382
- Identifiability*
- Causality in temporal systems: Characterizations and a survey. David A. Pierce and Larry D. Haugh 5 (1977) 265-293
- Consistency and _____. Arne Gabrielsen 8 (1978) 261-263
- The structural ____ of linear models with autocorrelated errors in the case of cross-equation restrictions. Manfred Deistler 8 (1978) 23-31
- Identification*
- Education, income and ability revisited. Gary Chamberlin..... 5 (1977) 241-257
- First order ____ in linear models. Alain Monfort 7 (1978) 333-350
- Local and global ____ and strong consistency in time series models. R. Kohn 8 (1978) 269-293
- Several efficiency two-step estimators for the dynamic simultaneous equations model with autoregressive disturbances. Michio Hatanaka. 4 (1976) 189-204
- The first-order moving average process: ____, estimation and prediction. Charles R. Nelson..... 2 (1974) 121-141
- The problem of ____ in finite parameter continuous time models. P.C.B. Phillips..... 1 (1973) 351-362
- The use of monthly and quarterly data in an ARMA model. F.A.G. Den Butter 4 (1976) 311-324
- Identification and normalization. Dennis J. Aigner and T. Sawa..... 2 (1974) 389-391
- Identification of simultaneous equation models with measurement error. Vincent J. Geraci..... 4 (1976) 263-283
- Identification test * The graph of the k -class estimators: An algebraic and statistical interpretation. R.W. Farebrother and N.E. Savin..... 2 (1974) 373-388
- Improved estimators * On the sampling distribution of ____ for coefficients in linear regression. Aman Ullah..... 2 (1974) 143-150
- Income*
- Education, ____ and ability revisited. Gary Chamberlin 5 (1977) 241-257
- Measurement of the purchasing power of ____ with linear expansion data. S.N. Afriat..... 2 (1974) 343-364

- The allocation of household _____ to food consumption. Saul H. Hymans and Harold T. Shapiro 4 (1976) 167-188
- Income distribution model* * On the estimation of Engel elasticities from grouped observations with application to Indonesian data. Nanak Kakwani..... 6 (1977) 1-19
- Income distribution parameters* * Efficient estimation of _____. Teun Kloek and Herman K. van Dijk..... 8 (1978) 61-74
- Income series* * Testing _____. An application of principal components. C.L. Haddad..... 4 (1976) 27-40
- Incomplete observations* * The use of _____ in multiple regression analysis: A generalized least squares approach. Marcel G. Dagenais.. 1 (1973) 317-328
- Incomplete observations* and simultaneous-equations models. Marcel G. Dagenais..... 4 (1976) 231-241
- Inconsistency of the OLS estimator of the partial adjustment-adaptive expectations model.* H.E. Doran and W.E. Griffiths 7 (1978) 133-146
- Inconsistent instrumental variables estimators* * The behavior of _____ in dynamic systems with autocorrelated errors. David F. Hendry..... 9 (1979) 295-314
- Independent ARIMA processes* * Forecasting aggregates of _____. David E. Rose 5 (1977) 323-345
- Independent variable* * Regression with a binary _____ subject to errors of observation. Dennis J. Aigner..... 1 (1973) 49-60
- Index data* * The reconstruction of _____ in aggregative econometric models. Dit Sang Ho..... 10 (1979) 333-359
- Index numbers* * Exact and superlative _____. W.E. Diewert..... 4 (1976) 115-145
- Indicator, leading* * Forecasting in dynamic models with stochastic regressors. David A. Pierce 3 (1975) 349-374
- Indicator variables* * Modeling monetary policy as an unobserved variable. Robert B. Avery..... 10 (1979) 291-311
- Indirect least squares* * Single-equation estimators and aggregation restrictions when equations have the same sets of regressors. Frank T. Denton 8 (1978) 173-179
- Indirect translog model* * A comparative study of complete systems of demand functions. N. Anders Klevmarken..... 10 (1979) 165-191
- Indonesian data*
A new method of estimating Engel elasticities. Nanak Kakwani..... 8 (1978) 103-110
On the estimation of Engel elasticities from grouped observations with application to _____. Nanak Kakwani..... 6 (1977) 1-19
- Industrial development* * A class of dynamic models for describing and projecting _____. Richard H. Day and Jon P. Nelson..... 1 (1973) 155-190
- Inefficiency* * Estimating technical and allocative _____ relative to stochastic production and cost frontiers. Peter Schmidt and C.A. Knox Lovell 9 (1979) 343-366
- Inequality*
A _____ and a lemma revisited. O.D. Andersen..... 6 (1977) 135-140
A _____ with a time series application. O.D. Anderson 2 (1974) 189-193
The estimation of a family of measures of economic _____. Joseph L. Gastwirth 3 (1975) 61-70
- Inference procedures*
Some aspects of bivariate regression subject to linear constraints. George C. Tiao and Wei-Yuan Tan..... 5 (1977) 13-35
Testing the exogeneity specification in the complete dynamic simultaneous equation model. John Geweke 7 (1978) 163-185
Infinite continuous lags * Smooth distributed lag estimators and smoothing spline functions in Hilbert spaces. Corrado Corradi 5 (1977) 211-219
- Information* * Estimation in a disequilibrium model and the value of _____. Stephen M. Goldfeld and Richard E. Quandt..... 3 (1975) 325-348
- Information and computation* in a simultaneous equations estimation. Warren Dent 4 (1976) 89-95

- Information estimators* * Asymptotic properties of ____ in dynamic autoregressive simultaneous equation models. Phoebus J. Dhrymes and H. Erlat 2 (1974) 247-259
- Information in regression* * A note on extraneous _____. Richard Brook and T.D. Wallace 1 (1973) 315-316
- Information loss* * The effect of temporal aggregation on parameter estimation in distributed lag model. William W.S. Wei 8 (1978) 237-246
- Information matrix*
 A note on the ____ of the multivariate normal distribution. Jean-François Richard 3 (1975) 57-60
 Gains in efficiency from joint estimation of systems of autoregressive moving average processes. Charles R. Nelson 4 (1976) 331-348
 Maximum likelihood estimation of the GLS model with unknown parameters in the disturbance covariance matrix. Jan R. Magnus 7 (1978) 281-312
 On the efficient estimation methods for the macro-economic models nonlinear in variables. Michio Hatanaka 8 (1978) 323-356
- Initial condition terms* * The effects of various treatments of truncation remainders on tests of hypotheses in distributed lag models. Peter Schmidt and David K. Guilkey 4 (1976) 211-230
- Input demand functions* * A study of multiple-output production functions: Klein's railroad study revisited. Georg Hasenkamp 4 (1976) 253-262
- Input-output analysis* * A class of dynamic models for describing and projecting industrial development. Richard H. Day and Jon P. Nelson 1 (1973) 155-190
- Input-output response* * Stochastic specification of production functions and economic implications. Richard E. Just and Rulon D. Pope 7 (1978) 67-86
- Instantaneous causality*
 The characterization of ____: A comment. David A. Pierce and Larry D. Haugh 10 (1979) 257-259
 The characterization of ____: A correction. J. Michael Price 10 (1979) 253-256
- Instrumental variables*
 An efficient two-step estimator for the dynamic adjustment model with autoregressive errors, Michio Hatanaka 2 (1974) 199-220
 Errors in variables in simultaneous equation models. Jerry A. Hausman 5 (1977) 389-401
 Incomplete observations and simultaneous-equations models. Marcel G. Dagenais 4 (1976) 231-241
 Market analysis with rational expectations: Theory and estimation. R. LaVar Huntzinger 10 (1979) 127-145
 On the efficient estimation method for the macro-economic models nonlinear in variables. Michio Hatanaka 8 (1978) 323-356
 Optimal instruments when the disturbances are small. Roger W. Klein. Single-equation estimators and aggregation restrictions when equations have the same sets of regressors. Frank T. Denton 9 (1979) 367-377
 The behaviour of inconsistent ____ estimators in dynamic systems with autocorrelated errors. David F. Hendry 8 (1978) 173-179
 The demand for energy in Canadian manufacturing: An example of the estimation of production structures with many inputs. Melvyn A. Fuss 9 (1979) 295-314
- Integrated moving average process* * A Monte Carlo study of autoregressive _____. Warren Dent and An-Sik Min 5 (1977) 89-116
- Integrated moving average process* * A Monte Carlo study of autoregressive _____. Warren Dent and An-Sik Min 7 (1978) 23-55
- Intertemporal utility maximization* * On the consequences of planning interval specification error for the estimation of dynamic models. Roger A. Betancourt 6 (1977) 237-242
- Interval length* * The use of monthly and quarterly data in an ARMA model. F.A.G. Den Butter 4 (1976) 311-324
- Interval specification error* * On the consequences of planning ____ for the estimation of dynamic models. Roger A. Betancourt 6 (1977) 237-242

- Inventory investment behavior* * Retail _____. P.K. Trivedi 1 (1973) 61-80
- Invertibility*
 A Monte Carlo study of autoregressive integrated moving average processes. Warren Dent and An-Sik Min 7 (1978) 23-55
 Forecasting in dynamic models with stochastic regressors. David A. Pierce 3 (1975) 349-374
- Investment behavior*
 An empirical analysis of linear aggregation problems: The case of ____ in Japanese firms. Komei Sasaki..... 7 (1978) 313-331
 Retail inventory _____. P.K. Trivedi..... 1 (1973) 61-80
- Iterative estimation procedure* * Full maximum likelihood estimation of second-order autoregressive error models. Charles M. Beach and James G. MacKinnon 7 (1978) 187-198
- James-Stein estimator* * On the sampling distribution of improved estimators for coefficients in linear regression. Aman Ullah 2 (1974) 143-150
- Japanese crude steel production* * A Bayesian test of the produce cycle hypothesis applied to _____. Hiroki Tsurumi 4 (1976) 371-392
- Japanese firms* * An empirical analysis of linear aggregation problems: The case of investment behavior in _____. Komei Sasaki..... 7 (1978) 313-331
- Jenkins* * On a lemma associated with Box, _____, and Granger. O.D. Anderson 3 (1975) 151-156
- Joint estimation*
 Censored regression models with unobserved, stochastic censoring thresholds. Forrest D. Nelson 6 (1977) 309-327
 Gains in efficiency from ____ of systems of autoregressive-moving average processes. Charles R. Nelson 4 (1976) 331-348
- Joint probability distribution* * On the characterization of a ____ by conditional distributions. Christian Gourieroux and Alain Monfort... 10 (1979) 115-118
- Joint production* * Canonical ridge and econometrics of _____. H.D. Vinod 4 (1976) 147-166
- Joint test* * Testing the exogeneity specification in the complete dynamic simultaneous equation model. John Geweke..... 7 (1978) 163-185
- Jorgenson-Laffont method* * On the computational competitiveness of full-information maximum-likelihood and three-stage least-squares in the estimation of nonlinear, simultaneous-equations models. David A. Belsley 9 (1979) 315-342
- k-class estimators*
 Information and computation in simultaneous equations estimation. Warren Dent 4 (1976) 89-95
 Optimal instruments when the disturbances are small. Roger W. Klein. Single-equation estimators and aggregation restrictions when equations have the same sets of regressors. Frank T. Denton 9 (1979) 367-377
 Some large-concentration-parameter asymptotics for the _____. Roberto S. Mariano 8 (1978) 173-179
 The existence of moments of some simple Bayes estimators of coefficients in a simultaneous equation model. Jatinder S. Mehta and Paravastu A.V.B. Swamy 3 (1975) 171-177
 The graph of ____: An algebraic and statistical interpretation. R.W. Farebrother and N.E. Savin..... 7 (1978) 1-13
 The graph of ____: An algebraic and statistical interpretation. R.W. Farebrother and N.E. Savin..... 2 (1974) 373-383
- K common coefficients* * Estimation of common coefficients in two regression equations. P.A.V.B. Swamy and J.S. Mehta..... 10 (1979) 1-14
- k-dimensional normal distribution* * A note on the information matrix of the multivariate normal distribution. Jean-François Richard 3 (1975) 57-60
- K-matrix-class estimators* and the full information maximum-likelihood estimators as a special case. Werner Scharf..... 4 (1976) 41-50

- Kadane's small- σ method* * Optimal instruments when the disturbances are small. Roger W. Klein..... 9 (1979) 367-377
- Klein Model I* * Polynomial operators and the asymptotic distribution of dynamic multipliers. Leonard Gill and Sophocles N. Brissimis. . 7 (1978) 373-384
- Klein's railroad study* * A study of multiple-output production functions: _____ revisited. Georg Hasenkamp..... 4 (1976) 253-262
- Koyck distributed lag model* * Discriminating between autoregressive forms: A Monte Carlo comparison of Bayesian and ad hoc methods. D.E.A. Giles..... 3 (1975) 229-248
- Labour* * The translog function and the substitution of equipment, structures, and _____ in U.S. manufacturing 1929-68. Ernst R. Berndt and Laurits R. Christensen..... 1 (1973) 81-114
- Labour supply and commuting time: An empirical study.* Terence J. Wales..... 8 (1978) 215-226
- Lags: Rational and polynomial _____: The finite connection.* Adrian Pagan..... 8 (1978) 247-254
- Lag consumption function* * Bayesian analysis of the Federal Reserve-MIT-Penn model's Almon _____. Arnold Zellner and Anne D. Williams..... 1 (1973) 267-299
- Lag estimators* * Smooth distributed _____ and smoothing spline functions in Hilbert spaces. Corrado Corradi..... 5 (1977) 211 219
- Lag model(s)*
 A note on the Bayesian estimation of Solow's distributed _____. Robert S. Guthrie..... 4 (1976) 295-300
 The effect of temporal aggregation on parameter estimation in distributed _____. William W.S. Wei..... 8 (1978) 237-246
 The effects of various treatments of truncation remainders on tests of hypotheses in distributed _____. Peter Schmidt and David K. Guilkey..... 4 (1976) 211-230
- Lag structure(s)*
 Modeling monetary policy as an unobserved variable. Robert B. Avery 10 (1979) 291-311
 The _____ of option price. S.T. Kassouf..... 4 (1976) 303-310
- Lag structures, price-response* * Specification and estimation of dynamic demand systems incorporating polynomial price response functions: An application to U.S. clothing imports. J. Stuart McMenamin and Jean-Paul Pinard..... 7 (1978) 147-162
- Lagged dependent variable* * The small sample bias of Durbin's tests for serial correlation: When one of the regressors is the _____ and the null hypothesis is true. Byron G. Spencer..... 3 (1978) 249 254
- Lagged endogenous variables* * Estimation of a dynamic system of seemingly unrelated regressions with autoregressive disturbances. David E. Spencer..... 10 (1979) 227-241
- Lagrange multiplier* * Testing for multiplicative heteroskedasticity. Leslie G. Godfrey..... 8 (1978) 227-236
- Large-sample theory* * Estimation of the Pareto law from underreported data: A further analysis. David V. Hinkley and Nagesh S. Revankar. 5 (1977) 1-11
- Leading indicators* * Forecasting in dynamic models with stochastic regressors. David A. Pierce..... 3 (1974) 349-374
- Least-squares*
 An approximation to the finite sample distribution of Zellner's seemingly unrelated regression estimator. Peter C.B. Phillips..... 6 (1977) 147-164
 MSE dominance of _____ with errors-of-observation. Dennis J. Aigner.. 2 (1974) 365-372
 On obtaining the right sign of a coefficient estimate by omitting a variable from the regression. Ignazio Visco..... 7 (1978) 115-117
 Optimality of _____ in the seemingly unrelated regression equation model. T.D. Dwivedi and V.K. Srivastava..... 7 (1978) 391-395

- Least-squares and stochastic difference equations.* Bernt P. Stigum 4 (1976) 349-370
- Least-squares estimates* A result on the sign of restricted _____. Edward E. Leamer 3 (1975) 387-390
- Least-squares estimation*
- A note on ____ and the BLUE in a generalized linear regression model. Peter Schonfeld..... 3 (1975) 189-197
- A note on three-stage _____. Agustin Maravall..... 4 (1976) 325-330
- Least-squares estimator*
- Nonlinear models of analysis of variance. Jean-Pierre Laffargue..... 5 (1977) 347-363
- The effect of temporal aggregation on parameter estimation in distributed lag model. William W.S. Wei..... 8 (1978) 237-246
- The exact moments of the ____ for the autoregressive model. Takamitsu Sawa 8 (1978) 159-172
- The nonlinear limited-information maximum-likelihood estimator and the modified nonlinear two-stage _____. Takeshi Amemiya 3 (1975) 375-386
- Leontief functional forms, generalized*
- On testing separability restrictions with flexible functional forms. Charles Blackorby, Daniel Primont and R. Robert Russell..... 5 (1977) 195-209
- On the flexibility of flexible functional forms: An empirical approach. Terence J. Wales..... 5 (1977) 183-193
- Likelihood:* See also maximum likelihood
- Likelihood ratio tests*
- A simultaneous equations system of money demand and supply using generalized functional forms. John J. Spitzer 5 (1977) 117-128
- Estimation and testing for functional forms and autocorrelation: A simultaneous approach. N.E. Savin and Kenneth J. White 8 (1978) 1-12
- Some comparisons of tests for a shift in the slopes of a multivariate linear time series model. John U. Farley, Melvin Hinich and Timothy W. McGuire..... 3 (1975) 297-318
- Time series analysis and simultaneous equation econometric models. Arnold Zellner and Franz Palm..... 2 (1974) 17-54
- Limited dependent variable models*
- Censored regression models with unobserved, stochastic censoring thresholds. Forrest D. Nelson 6 (1977) 309-327
- Estimation of some ____ with application to housing demand. Lung-Fei Lee and Robert P. Trost 8 (1978) 357-382
- Limited information estimators* * A new class of ____ for simultaneous equation systems. Wouter J. Keller 3 (1975) 71-92
- Limited information maximum likelihood* * A note on non-linear _____. William J. Raduchel..... 7 (1978) 119-122
- Limited information maximum likelihood estimation* * Several efficient two-step estimators for the dynamic simultaneous equations model with autoregressive disturbances. Michio Hatanaka..... 4 (1976) 189-204
- Limited information maximum likelihood estimator* and the modified nonlinear two-stage least-squares estimator. Takeshi Amemiya..... 3 (1975) 375-386
- LIML estimator* * Regression using mixed annual and quarterly data. Christopher L. Gilbert..... 5 (1977) 221-239
- Lindley-type Bayesian test* * On testing hypotheses in simultaneous equation models. Alison Morgan and Walter Vandaele..... 2 (1974) 55-65
- Linear aggregation problems* * The case of investment behavior in Japanese firms: An empirical analysis of _____. Komei Sasaki..... 7 (1978) 313-331
- Linear constraints* * Some aspects of bivariate regression subject to _____. George C. Tiao and Wei-Yuan Tan..... 5 (1977) 13-35
- Linear dynamic econometric model* * Determining the final form of a _____. Piet de Jong..... 8 (1978) 181-192
- Linear expansion data* * Measurement of the purchasing power of incomes with _____. S.N. Afriat..... 2 (1974) 343-364
- Linear expenditure system* * A comparative study of complete systems of demand functions. N. Anders Klevmarken 10 (1979) 165-191

Linear model(s)

- A comparison of the power of some tests for heteroskedasticity in the general _____. A.C. Harvey and G.D.A. Phillips 2 (1974) 307-316
- Asymptotic properties of a correlation coefficient type statistic connected with the general _____. Laurens de Haan and Elselen Taconis-Haantjes 7 (1978) 15-21
- Estimation of ____ with crossed-error structure. Wayne A. Fuller and George E. Battese 2 (1974) 67-78
- First-order identification in _____. Alain Monfort 7 (1978) 333-350
- Mean square error tests for restrictions in singular _____. Burt S. Holland 6 (1977) 355-363
- The structural identifiability of ____ with autocorrelated errors in the case of cross-equation restrictions. Manfred Deistler 8 (1978) 23-31
- Uncorrelated residuals from _____. Warren T. Dent and George P.H. Styan 7 (1978) 211-225
- Linear probability function* * Retention of trainees: A study with dichotomous dependent variables. Morley Gunderson 2 (1974) 79-93
- Linear regression*
- A note on least squares estimation and the BLUE in a generalized ____ model. Peter Schonfeld 3 (1975) 189-197
- On the sampling distribution of improved estimators for coefficients in linear regression. Aman Ullah 2 (1974) 143-150
- The power of four tests of autocorrelation in the _____. Wilford L. L'Esperance and Daniel Taylor 3 (1975) 1-21
- Linear regression* using both temporally aggregated and temporally disaggregated data. Cheng Hsiao 10 (1979) 243-252
- Linear restrictions* * Weaker MSE criteria and tests for ____ in regression models with non-spherical disturbances. Marjorie B. McElroy 6 (1977) 389-394
- Linear time series model* * Some comparisons of tests for a shift in the slopes of a multivariate _____. John U. Farley, Melvin Hinich and Timothy W. McGuire 3 (1974) 297-318
- Linear unbiased estimators* * Nonlinear models of analysis of variance. Jean-Pierre Laffargue 5 (1977) 347-363
- Load forecasting*
- A mixed time-series/econometric approach to forecasting peak system load. Noel D. Uri 9 (1979) 155-171
- An approach to modeling seasonally stationary time series. Emanuel Parzen and Marcello Pagano 9 (1979) 137-153
- Econometric estimation of peak electricity demands. Robert M. Spann and Edward C. Beauvais 9 (1979) 119-136
- Modelling and forecasting time-of-day and seasonal electricity demands. Annals of Applied Econometrics (edited by A. Lawrence and D. Aigner) 9 (1979) 1-240
- Local and global identification* and strong consistency in time series models. R. Kohn 8 (1978) 269-293
- Local identifiability*
- Several efficient two-step estimators for the dynamic simultaneous equations model with autoregressive disturbances. Michio Hatanaka. 4 (1976) 189-204
- The structural identifiability of linear models with autocorrelated errors in the case of cross-equation restrictions. Manfred Deistler 8 (1978) 23-31
- Location and transit demand* * Parking _____. A case study of endogenous attributes in disaggregate mode choice models. Richard B. Westin and David W. Gillen 8 (1978) 75-101
- ✓ *Logistic model* * Predictions from binary choice models. Richard B. Westin 2 (1974) 1-16
- ✓ *Logit estimation, conditional* * Maximum score estimation of the stochastic utility model of choice. Charles F. Manski 3 (1975) 205-228

✓ Logit model

- On a two-step estimation of a multivariate _____. Takeshi Amemiya..... 8 (1978) 13-21
 Some small sample properties of estimators and test statistics in the multivariate _____. David K. Guilkey and Peter Schmidt..... 10 (1979) 33-42

Lorenz curve

- A new method of estimating Engel elasticities. Nanak Kakwani..... 8 (1978) 103-110
 On the estimation of Engel elasticities from grouped observations with application to Indonesian data. Nanak Kakwani..... 6 (1977) 1-19

- M-l dimensional simplex* * Stochastic specification and the estimation of share equations. A.D. Woodland..... 10 (1979) 361-383

- Macro and micro CES production functions* * A Bayesian estimation of. Hiroki Tsurumi and Yoshi Tsurumi..... 4 (1976) 1-25

Macro-economic model(s)

- On the efficient estimation methods for the ____ nonlinear in variables. Michio Hatanaka..... 8 (1978) 323-356

- The relative impact of monetary and fiscal policy instruments: Some structure-based estimates. B.T. McCallum..... 2 (1974) 283-299

- Macroeconomic stabilization actions* * A test of the endogeneity of monetary policy. Richard T. Froyen..... 2 (1974) 175-188

- Macroeconomic variables* * Non-interacting control of ____: Implications on policy mix considerations. Masanao Aoki..... 2 (1974) 261-281

- Manpower development and training act* * Federally subsidized occupational training and the employment and earnings of male trainees. Nicholas M. Kiefer..... 8 (1978) 111-125

- Manufacturing employment* * The distribution of changes in ____ and the impact of the minimum wage. Noel D. Uri and J. Wilson Mixon..... 7 (1978) 103-114

- Marginal posterior densities* * Bayesian regression analysis using poly-*t* densities. Jacques H. Dreze..... 6 (1977) 329-354

- Market analysis* with rational expectations: Theory and estimation. R. LaVar Huntzinger..... 10 (1979) 127-145

- Markets subject to uncertainty* * Rational expectations and the econometric modeling of ____: A Bayesian approach. Sanford Grossman..... 3 (1975) 255-272

- Markov autocorrelation* * Testing for autocorrelation in the autoregressive moving average error model. John Fitts..... 1 (1973) 373-376

- Markov model* * A ____ for switching regression. Stephen M. Goldfeld and Richard E. Quandt..... 1 (1973) 3-16

- Matrix polynomials* * Local and global identification and strong consistency in time series models. R. Kohn..... 8 (1978) 269-293

Maximum likelihood

- A Monte Carlo study of autoregressive integrated moving average processes. Warren Dent and An-Sik Min..... 7 (1978) 23-55

- A note on non-linear limited-information. William J. Raduchel..... 7 (1978) 119-122

- Asymptotic properties of full information estimators in dynamic autoregressive simultaneous equation models. Phoebus J. Dhrymes and H. Erlat..... 2 (1974) 247-259

- Linear regression using both temporally aggregated and temporally disaggregated data. Cheng Hsiao..... 10 (1979) 243-252

Maximum likelihood estimation

- Autocorrelation and dynamic methodology with an application to wage determination models. Lloyd R. Kenward..... 3 (1975) 179-187

- Education, income and ability revisited. Gary Chamberlin..... 5 (1977) 241-257

- Estimation in the first-order moving average model through the finite autoregressive approximation: Some asymptotic results. Raul Pedro Mentz..... 6 (1977) 225-236

- Estimation of functions of population means and regression coefficients including structural coefficients: A minimum expected loss (MELO) approach. Arnold Zellner..... 8 (1978) 127-158

- Estimation of some limited dependent variable models with application to housing demand. Lung-Fei Lee and Robert P. Trost 8 (1978) 357-382
- Estimation of the Pareto law from underreported data: A further analysis. David V. Hinkley and Nagesh S. Revankar..... 5 (1977) 1-11
- Formulation and estimation of stochastic frontier production function models. Dennis J. Aigner, C.A. Knox Lovell and Peter Schmidt..... 6 (1977) 21-37
- Full ____ of second-order autoregressive error models. Charles M. Beach and James G. MacKinnon 7 (1978) 187-198
- On a two-step estimation of a multivariate logit model. Takeshi Amemiya 8 (1978) 13-21
- On Bayesian and non-Bayesian estimation of a two-level CES production function for the Dutch manufacturing sector. Rins Harkema and Sybrand Schim van der Loeff 5 (1977) 155-165
- Maximum likelihood estimation* of the GLS model with unknown parameters in the disturbance covariance matrix. Jan R. Magnus 7 (1978) 281-312
- Maximum likelihood estimator*
- A Bayesian estimation of macro and micro CES production functions. Hiroki Tsurumi and Yoshi Tsurumi 4 (1976) 1-25
- A new class of limited-information estimators for simultaneous equation systems. Wouter J. Keller..... 3 (1975) 71-92
- A note on a heteroscedastic model. Takeshi Amemiya 6 (1977) 365-370
- A note on the Bayesian estimation of Solow's distributed lag model. Robert S. Guthrie..... 4 (1976) 295-300
- K-matrix-class estimators and the full-information ____ as a special case. Werner Scharf 4 (1976) 41-50
- Some small sample properties of estimators and test statistics in the multivariate logit model. David K. Guilkey and Peter Schmidt..... 10 (1979) 33-42
- The nonlinear limited-information ____ and the modified nonlinear two-stage least-squares estimator. Takeshi Amemiya 3 (1975) 375-386
- Maximum likelihood estimators, statistical properties of* * On the estimation of the Pareto law from under-reported data. Michael J. Hartley and Nagesh S. Revankar 2 (1974) 327-341
- Maximum likelihood functions* * Estimation in a disequilibrium model and the value of information. Stephen M. Goldfeld and Richard E. Quandt 3 (1976) 325-348
- Maximum likelihood procedure*
- Censored regression models with unobserved, stochastic censoring thresholds. Forrest D. Nelson 6 (1977) 309-327
- Experience using the Box-Cox transformation when forecasting economic time series. Harold L. Nelson, Jr. and C.W.J. Granger 10 (1979) 57-69
- Maximum score* estimation of the stochastic utility model of choice. Charles F. Manski..... 3 (1975) 205-228
- Mean square error*
- Bayesian assessment of the unconditional ____ of repeated predictions from a regression equation. Nicholas J. Gonedes and Harry V. Roberts 2 (1974) 221-240
- Relative efficiencies of some simple Bayes estimators of coefficients in a dynamic equation with serially correlated errors - II. Paravastu A.V.B. Swamy and Paul N. Rappoport..... 7 (1978) 245-258
- Some comments on estimation in regression after preliminary tests of significance. M.E. Bock, G.G. Judge and T.A. Yancey 1 (1973) 191-200
- The bias and ____ of forecasts from partially restricted reduced form. Anirudh L. Nagar and Surottam N. Sahay 7 (1978) 227-243
- The ____ of a combined estimator and numerical comparison with the TSLS estimator. Takamitsu Sawa 1 (1973) 115-132
- Mean square error criterion, generalized* * Properties of estimators after preliminary tests of significance when stochastic restrictions are used in regression. G.G. Judge, T.A. Yancey and M.E. Bock 1 (1973) 29-48

- Mean square error matrix* * Omitted variables, variability of estimated parameters and the appearance of autocorrelated disturbances. Yash Pal Gupta and Esfandiar Maasoumi..... 9 (1979) 379-385
- Mean square error tests* for restrictions in singular linear models. Burt S. Holland..... 6 (1977) 355-363
- Mean zero stochastic process* * Forecasting aggregates of independent ARIMA processes. David E. Rose..... 5 (1977) 323-345
- Measurement error* * Identification of simultaneous equation models with _____. Vincent J. Geraci..... 4 (1976) 263-283
- Measurement errors* and bounded OLS estimates. Maurice D. Levi..... 6 (1977) 165-171
- Micro CES production functions* * A Bayesian estimation of macro and _____. Hiroki Tsurumi and Yoshi Tsurumi..... 4 (1976) 1-25
- Minimum chi-square estimation procedure* * Efficient estimation of income distribution parameters. Teun Kloek and Herman K. van Dijk..... 8 (1978) 61-74
- Minimum expected loss (MELO) approach* * Estimation of functions of population means and regression coefficients including structural coefficients: A _____. Arnold Zellner..... 8 (1978) 127-158
- Minimum wage* * The distribution of changes in manufacturing employment and the impact of the _____. Noel D. Uri and J. Wilson Mixon..... 7 (1978) 103-114
- Mismeasured variables* * Measurement errors and bounded OLS estimates. Maurice D. Levi..... 6 (1977) 165-171
- Missing data*
 On Bayesian estimation of seemingly unrelated regressions when some observations are missing. P.A.V.B. Swamy and J.S. Mehta..... 3 (1975) 157-169
 Regression using mixed annual and quarterly data. Christopher L. Gilbert..... 5 (1977) 221-239
 The use of incomplete observations in multiple regression analysis: A generalized least squares approach. Marcel G. Dagenais..... 1 (1973) 317-328
- Misspecification*
 Autocorrelated disturbances in the light of specification analysis. Maitreyi Chaudhuri (Mukherjee)..... 5 (1973) 301-313
 Bayesian assessment of the unconditional mean square error of repeated predictions from a regression equation. Nicholas J. Gonedes and Harry V. Roberts..... 2 (1974) 221-240
 Estimation and testing for functional form and autocorrelation: A simultaneous approach. N.E. Savin and Kenneth J. White..... 8 (1978) 1-12
 Harmonic alternatives to the Almon polynomial technique. Susan S. Hamlen and William A. Hamlen, Jr..... 7 (1978) 57-66
 Monte Carlo methodology and the small sample behaviour of ordinary and two-stage least squares. David F. Hendry and Robin W. Harrison..... 2 (1974) 151-174
 Omitted variables, variability of estimated parameters and the appearance of autocorrelated disturbances. Yash Pal Gupta and Esfandiar Maasoumi..... 9 (1979) 379-385
 Spurious regressions in econometrics. C.W.J. Granger and P. Newbold..... 2 (1974) 111-120
 Testing for ____ in regression analysis. Andrew C. Harvey and Patrick Collier..... 6 (1977) 103-119
 The behaviour of inconsistent instrumental variables estimators in dynamic systems with autocorrelated errors. David F. Hendry..... 9 (1979) 295-314
- Mixed annual and quarterly data* * Regression using _____. Christopher L. Gilbert..... 5 (1977) 221-239
- Mixed error terms* * Autocorrelation and dynamic methodology with an application to wage determination models. Lloyd R. Kenward..... 3 (1975) 179-187
- Mixed models* * A Monte Carlo study of autoregressive integrated moving average processes. Warren Dent and An-Sik Min..... 7 (1978) 23-55
- Modal estimation* * Differencing on random walks and near random walks. Nicholas J. Gonedes and Harry V. Roberts..... 6 (1977) 289-308
- Mode choice models* * Empirical estimation of the value time using multi-_____. John Kraft and Arthur Kraft..... 2 (1974) 317-326

- Modigliani-Brumberg-Ando theory of consumer behavior* * Bayesian analysis of the Federal Reserve MIT Penn model's Almon lag consumption function. Arnold Zellner and Anne D. Williams..... 3 (1973) 267-299
- Moments*
- On the existence of ____ of the partially restricted reduced-form estimators from a simultaneous-equation model. John L. Knight..... 5 (1977) 315-321
- The existence of ____ of some simple Bayes estimators of coefficients in a simultaneous equation model. Jatinder S. Mehta and Paravastu A.V.B. Swamy..... 7 (1978) 1-13
- Moment estimator* * The first-order moving average process: Identification, estimation and prediction. Charles R. Nelson..... 2 (1974) 121-141
- Moments, exact* * On the sampling distribution of improved estimators for coefficients in linear regression. Aman Ullah..... 2 (1974) 143-150
- Monetary and fiscal policy instruments* * The relative impact of ____: Some structure-based estimates. B.T. McCallum..... 2 (1974) 283-299
- Monetary policy*
- A test of the endogeneity of _____. Richard T. Froyen..... 2 (1974) 175-188
- Modeling ____ as an unobserved variable. Robert B. Avery..... 10 (1979) 291-311
- Money demand* * A simultaneous equations system of ____ and supply using generalized functional forms. John J. Spitzer..... 5 (1977) 117-128
- Monopoly, degree of* * Testing price taking behavior. Elie Appelbaum..... 9 (1979) 283-294
- Monotone transform* * Goodness of fit for seemingly unrelated regressions: Glahn's $R^2_{y,x}$ and Hooper's $\bar{r}^2$. Marjorie B. McElroy..... 6 (1977) 381-387
- Monte Carlo comparison*
- A ____ of traditional and Stein-rule estimators under squared error loss. Thomas A. Yancey and George G. Judge..... 4 (1976) 285-294
- Discriminating between autoregressive forms: A ____ of Bayesian and ad hoc methods. D.E.A. Giles..... 3 (1975) 229-248
- Monte Carlo experiments*
- Alternative tests for a first-order vector autoregressive error specification. David K. Guilkey..... 2 (1974) 95-104
- An efficient two-step estimator for the dynamic adjustment model with autoregressive errors. Michio Hatanaka..... 2 (1974) 199-220
- A note on the Bayesian estimation of Solow's distributed lag model. Robert S. Guthrie..... 4 (1976) 295-300
- Estimation in a disequilibrium model and the value of information. Stephen M. Goldfeld and Richard E. Quandt..... 3 (1975) 325-348
- Estimation of a dynamic system of seemingly unrelated regressions with autoregressive disturbances. David E. Spencer..... 10 (1979) 227-241
- Estimation of seemingly unrelated regressions with unequal numbers of observations. Peter Schmidt..... 5 (1977) 365-377
- Formulation and estimation of stochastic frontier production function models. Dennis Aigner, C.A. Knox Lovell and Peter Schmidt..... 6 (1977) 21-37
- Hypothesis testing based on goodness-of-fit in the moving average time series model. Charles R. Nelson and Gary S. Shea..... 10 (1979) 221-226
- On choosing the optimal level of significance for the Durbin-Watson test and the Bayesian alternative. Thomas B. Fomby and David K. Guilkey..... 8 (1978) 203-213
- Relative efficiencies of some simple Bayes estimators of coefficients in dynamic models - I. P.A.V.B. Swamy and Paul N. Rappoport..... 3 (1975) 273-296
- Seemingly unrelated nonlinear regressions. A. Ronald Gallant..... 3 (1975) 35-50
- Some comparisons of tests for a shift in the slopes of a multivariate linear time series model. John U. Farley, Melvin Hinich and Timothy W. McGuire..... 3 (1975) 297-318
- Some small sample properties of estimators and test statistics in the multivariate logit model. David K. Guilkey and Peter Schmidt..... 10 (1979) 33-42
- Testing for multiplicative heteroskedasticity. Leslie G. Godfrey..... 8 (1978) 227-236
- Testing unstable econometric models for stability. Elizabeth F. Gustafson..... 8 (1978) 193-201

- The effects of various treatments of truncation remainders on tests of hypotheses in distributed lag models. Peter Schmidt and David K. Guilkey..... 4 (1976) 211-230
- The exact moments of the least squares estimator for the autoregressive model. Takamitsu Sawa..... 8 (1978) 159-172
- The first order moving average process: Identification, estimation and prediction. Charles R. Nelson..... 2 (1974) 121-141
- The use of incomplete observations in multiple regression analysis: A generalized least squares approach. Marcel G. Dagenais..... 1 (1973) 317-328
- Monte Carlo methodology* and the small sample behaviour of ordinary and two-stage least squares. David F. Hendry and Robin W. Harrison..... 2 (1974) 151-174
- Monte Carlo methods*
- A comparative study of finite sample properties of bank spectrum regression estimators. Svend Hylleberg..... 5 (1977) 167-174
- Estimation of a non-invertible moving average process: The case of overdifferencing. Charles I. Plosser and G. William Schwert..... 6 (1977) 199-224
- Gains in efficiency from joint estimation of systems of autoregressive moving average processes. Charles R. Nelson..... 4 (1976) 331-348
- Maximum estimation of the stochastic utility model of choice. Charles F. Manski..... 3 (1975) 205-228
- On the impact of the tests for serial correlation upon the test of significance for the regression coefficient. Alice Nakamura and Masao Nakamura..... 7 (1978) 199-210
- Relative efficiencies of some simple Bayes estimators of coefficients in a dynamic equation with serially correlated errors - II. P.A.V.B. Swamy and Paul N. Rappoport..... 7 (1978) 245-258
- Monte Carlo studies* * A classified bibliography of _____ in econometrics. Eric R. Sowe..... 1 (1973) 377-395
- Monte Carlo study* * A _____ of autoregressive integrated moving average processes. Warren Dent and An-Sik Min..... 7 (1978) 23-55
- Moore-Penrose inverse* * A note on the measurability of the pseudo-inverse. Peter Schonfeld..... 1 (1973) 313-314
- Moving average error model*
- Autocorrelation and dynamic methodology with an application to wage determination models. Lloyd R. Kenward..... 3 (1975) 179-187
- Testing for autocorrelation in the autoregressive _____. John Fitts..... 1 (1973) 363-376
- Moving average model*
- A comparative study of finite sample properties of band spectrum regression estimators. Svend Hylleberg..... 5 (1977) 167-182
- Estimation in the first-order _____ through the finite autoregressive approximation: Some asymptotic results. Raul Pedro Mentz..... 6 (1977) 225-236
- Moving average process(es)*
- A Monte Carlo study of autoregressive integrated _____. Warren Dent and An-Sik Min..... 7 (1978) 23-55
- An inequality and a lemma revisited. O.D. Anderson..... 6 (1977) 135-140
- An inequality with a time series application. O.D. Anderson..... 2 (1974) 189-193
- Estimation of a non-invertible _____. The case of overdifferencing. Charles I. Plosser and G. William Schwert..... 6 (1977) 199-224
- First-order _____. Identification, estimation and prediction. Charles R. Nelson..... 2 (1974) 121-141
- Gains in efficiency from joint estimation of systems of autoregressive _____. Charles R. Nelson..... 4 (1976) 331-348
- On a lemma associated with Box, Jenkins and Granger. O.D. Anderson..... 3 (1975) 151-156
- On the structure of _____. Craig F. Ansley, W. Allen Spivey and William J. Wroblewski..... 6 (1977) 121-134
- On univariate time series methods and simultaneous equation econometric models. Franz Palm..... 5 (1977) 379-388

- Moving average process, autoregressive*
 FIML estimation of the dynamic simultaneous equations model with ARMA disturbances. Greg Reinsel 9 (1979) 263-281
 Time series analysis and simultaneous equation econometric models. Arnold Zellner and Franz Palm..... 2 (1974) 17-54
- Moving average process, first-order*
 Inconsistency of the OLS estimator of the partial adjustment-adaptive expectations model. H.E. Doran and W.E. Griffiths 7 (1978) 133-146
- Moving average time series model* * Hypothesis testing based on goodness of fit in the _____. Charles R. Nelson and Garry S. Shea 10 (1979) 221-226
- MSE*: See also Mean square error
- MSE* * Weaker ____ criteria and tests for linear restrictions in regression models with non-spherical disturbances. Marjorie B. McElroy 6 (1977) 389-394
- MSE* dominance of least squares with errors-of-observation. Dennis J. Aigner 2 (1974) 365-372
- Multi-collinearity* * On Bayesian and non-Bayesian estimation of a two-level CES production function for the Dutch manufacturing sector. Rins Harkema and Sybrand Schim van der Loeff..... 5 (1977) 155-165
- Multidimensional scaling*: Some econometric applications. Schlomo Maital 8 (1978) 33-46
 9 (1979) 223-237
- Multi-period pricing* with stochastic demand. Robert E. Dansby 9 (1979) 223-237
- Multiple correlation coefficient* * Posterior distribution for the ____ with fixed regressors. S. James Press and Arnold Zellner..... 8 (1978) 307-321
- Multiple correlation coefficient, shrinkage of* * Bayesian assessment of the unconditional mean square error of repeated predictions from a regression equation. Nicholas J. Gonedes and Harry V. Roberts..... 2 (1974) 221-240
- Multiple linear regression* * Measurement errors and bounded OLS estimates. Maurice D. Levi..... 6 (1977) 165-171
- Multiple-output production functions* * A study of ____: Klein's railroad study revisited. Georg Hasenkamp..... 4 (1976) 253-262
- Multiple regression analysis* * The use of incomplete observations in ____: A generalized least squares approach. Marcel G. Dagenais 1 (1973) 317-328
- Multiple regression model* * On Bayesian estimation of seemingly unrelated regressions when some observations are missing. P.A.V.B. Swamy and J.S. Mehta..... 3 (1975) 157-169
 8 (1978) 227-236
- Multiplicative heteroskedasticity* * Testing for _____. Leslie G. Godfrey 8 (1978) 227-236
- Multiplicative models* * Nonlinear models of analysis of variance. Jean-Pierre Laffargue 5 (1977) 347-363
- Multiswitch problem* * A Markov model for switching regressions. Stephen M. Goldfeld and Richard E. Quandt 1 (1973) 3-16
- Multivariate linear time series model* * Some comparisons of tests for a shift in the slopes of a _____. John U. Farley, Melvin Hinich and Timothy W. McGuire..... 3 (1975) 297-318
- Multivariate logit model*
 On a two-step estimation of a _____. Takeshi Amemiya..... 8 (1978) 13-21
 Some small sample properties of estimators and test statistics in the _____. David K. Guilkey and Peter Schmidt 10 (1979) 33-42
- Multivariate normal distribution*
 A note on the information matrix of the _____. Jean-François Richard.. 3 (1975) 57-60
 Asymptotic properties of a correlation coefficient type statistic connected with the general linear model. Laurens de Haan and Elselen Taconis-Haantjes 7 (1978) 15-21
- Multivariate probability density functions* * Bayesian regression analysis using poly-*t* densities. Jacques H. Dreze 6 (1977) 329-354
- Multivariate regression analysis* * The allocation of household income to food consumption. Saul H. Hymans and Harold T. Shapiro 4 (1976) 167-188
- Multivariate regression models* * Generalized variance-ratio tests for serial correlation in _____. Jerzy Szroeter..... 8 (1978) 47-59

- Multivariate student-t distributions* * A Bayesian test of a parameter shift and an application. Hiroki Tsurumi 6 (1977) 371-380
- Naive models* * A comparative study of complete systems of demand functions. N. Anders Klevmarken 10 (1979) 165-191
- Natural conjugate prior* * Posterior distribution for the multiple correlation coefficient with fixed regressors. S. James Press and Arnold Zellner 8 (1978) 307-321
7 (1978) 87-102
- Neoclassical production theory* * Testing _____. Elie Appelbaum 3 (1975) 179-187
- Nested likelihood ratio tests* * Autocorrelation and dynamic methodology with an application to wage determination models. Lloyd R. Kenward 9 (1979) 263-281
- Non-additivity* * A comparative study of complete systems of demand functions. N. Anders Klevmarken 10 (1979) 165-191
- Non-Bayesian estimation* * On Bayesian and ____ of a two-level CES production function for the Dutch manufacturing sector. Rins Harkema and Schim van der Loeff 5 (1977) 155-165
- Non-competitive markets* * Testing price taking behavior. Elie Appelbaum 9 (1979) 283-294
- Non-interacting control* of macroeconomic variables: Implications on policy mix considerations. Masanao Aoki 2 (1974) 261-281
- Non-invertible moving average process* * Estimation of a ____: The case of over-differencing. Charles I. Plosser and G. William Schwert 6 (1977) 199-224
- Non-invertibility* * Forecasting in dynamic models with stochastic regressors. David A. Pierce 3 (1974) 349-374
- Non-iterative principal components* * Optimal instruments when the disturbances are small. Roger W. Klein 9 (1979) 367-377
- Nonlinear in variables* * On the efficient estimation methods for the macro-economic models _____. Michio Hatanaka 8 (1978) 323-356
- Nonlinear limited-information*
A note on ____ maximum-likelihood. William J. Raduchel 7 (1978) 119-122
The ____ maximum-likelihood estimator and the modified nonlinear two-stage least-squares estimator. Takeshi Amemiya 3 (1974) 375-386
- Nonlinear models* of analysis of variance. Jean-Pierre Lafargue 5 (1977) 347-363
- Nonlinear, simultaneous-equations models* * On the computational competitiveness of full-information maximum-likelihood and three-stage least-squares in the estimation of _____. David A. Belsley 9 (1979) 315-342
- Nonlinear two-stage least-squares estimator*
The nonlinear limited-information maximum-likelihood estimator and the modified _____. Takeshi Amemiya 3 (1975) 375-386
The _____. Takeshi Amemiya 2 (1974) 105-110
- Nonsense regressions* * Spurious regressions in econometrics. C.W.J. Granger and P. Newbold 2 (1974) 111-120
- Non-spherical disturbances* * Weaker MSE criteria and tests for linear restrictions in regression models with _____. Marjorie B. McElroy 6 (1977) 389-394
- Normal distribution* * Stochastic specification and the estimation of share equations. A.D. Woodland 10 (1979) 361-383
- Normal regression* * Best quadratic unbiased estimators of the variance-covariance matrix in _____. Pietro Balestra 1 (1973) 17-28
- Normality* * The use of R^2 to determine the appropriate transformation of regression variables. C.W.J. Granger and P. Newbold 4 (1976) 205-210
- Normality, asymptotic*
Asymptotic properties of a correlation coefficient type statistic connected with the general linear model. Laurens de Haan and Elselen Taconis-Haantjes 7 (1978) 15-21

- Stochastic specification of production functions and economic implications. Richard E. Just and Rulon D. Pope 7 (1978) 67-86
- Normalization* * Identification and _____. D.J. Aigner and T. Sawa 2 (1974) 389-391
- Normalization* in point estimation. Walter D. Fisher 4 (1976) 243-252
- Normalization* in point estimation: Comment, Reply, and Rejoinder. Joseph B. Kadane and Walter D. Fisher 7 (1978) 123-129
- Null hypothesis*
- Testing for multiplicative heteroskedasticity. Leslie G. Godfrey 8 (1978) 227-236
- The small sample bias of Durbin's tests for serial correlation: When one of the regressors is the lagged dependent variable and the ____ is true. Byron G. Spencer 3 (1975) 249-254
- Numerical comparison* * The mean square error of a combined estimator and ____ with the TSLS estimator. Takamitsu Sawa 1 (1973) 115-132
- Numerical integration* * Efficient estimation of income distribution parameters. Teun Kloek and Herman K. van Dijk 8 (1978) 61-74
- Observations* * Estimation of seemingly unrelated regressions with unequal numbers of _____. Peter Schmidt 5 (1977) 365-377
- Observation error, one-sided* * On the estimation of the Pareto law from under-reported data. Michael J. Hartley and Nagesh S. Revankar 2 (1974) 327-341
- Observational information* * Identification of simultaneous equation models with measurement error. Vincent J. Geraci 4 (1976) 263-283
- Occupational training* * Federally subsidized ____ and the employment and earnings of male trainees. Nicholas M. Kiefer 8 (1978) 111-125
- Oligopolistic markets* * Firm interdependence in _____. Frank M. Gollop and Mark J. Roberts 10 (1979) 313-331
- OLS*: See also Ordinary least squares
- OLS*
- A comparative study of finite sample properties of bank spectrum regression estimators. Svend Hylleberg 5 (1977) 167-182
- A note on three-stage least-squares. Agustin Maravall 4 (1976) 325-330
- An efficient two-step estimator for the dynamic adjustment model with autoregressive errors. Michio Hatanaka 2 (1974) 199-220
- Retention of trainees: A study with dichotomous variables. Morley Gunderson 2 (1974) 79-93
- Single-equation estimators and aggregation restrictions when equations have the same set of regressors. Frank T. Denton 8 (1978) 173-179
- OLS estimates* * Measurement errors and bounded _____. Maurice D. Levi 6 (1977) 165-171
- OLS estimator*
- Inconsistency of the ____ of the partial adjustment-adaptive expectations model. H.E. Doran and W.E. Griffiths 7 (1978) 133-146
- Omitted variables, variability of estimated parameters and the appearance of autocorrelated disturbances. Yash Pal Gupta and Esfandiar Maasoumi 9 (1979) 379-385
- Recursions for the two-stage least-squares estimators. Garry D.A. Phillips 6 (1977) 65-77
- The mean square error of a combined estimator and numerical comparison with the TSLS estimator. Takamitsu Sawa 1 (1973) 115-132
- OLS estimation*
- Autocorrelated disturbances in the light of specification analysis. Maitreyi Chaudhuri (Mukherjee) 5 (1977) 301-313
- Differencing of random walks and near random walks. Nicholas J. Gonedes and Harry V. Roberts 6 (1977) 289-308
- Regression using mixed annual and quarterly data. Christopher L. Gilbert 5 (1977) 221-239
- OLS residuals* * Testing for functional misspecification in regression analysis. Andrew C. Harvey and Patrick Collier 6 (1977) 103-119

- Omitted variables* * Education, income, and ability revisited. Gary Chamberlin 5 (1977) 241-257
- Omitted variables*, variability of estimated parameters and the appearance of autocorrelated disturbances. Yash Pal Gupta and Esfandiar Maasoumi 9 (1979) 379-385
- Omitting a variable* * On obtaining the right sign of a coefficient estimate by ____ from the regression. Ignazio Visco 7 (1978) 115-117
- Omission of regressors* * Autocorrelated disturbances in the light of specification analysis. Maitreyi Chaudhuri (Mukherjee) 5 (1977) 301-313
- On-the-job training* * Retention of trainees: A study with dichotomous dependent variables. Morley Gunderson 2 (1974) 79-93
- Open models* * The construction and estimation of continuous time models and discrete approximations in econometrics. Peter M. Robinson 6 (1977) 173-197
- Optimal experimental design* in econometrics: The time series problem. Panagiotis A. Papakyrasiz 7 (1978) 351-372
- Optimal instruments* when the disturbances are small. Roger W. Klein 9 (1979) 367-377
- Optimal levels of significance*
- Estimation of variance after a preliminary test of homogeneity and ____ for the pre-test. T. Toyoda and T.D. Wallace 3 (1975) 395-404
- On choosing the ____ for the Durbin-Watson test and the Bayesian alternative. Thomas B. Fomby and David K. Guilkey 8 (1978) 203-213
- Optimal point estimates* * Posterior distribution for the multiple correlation coefficient with fixed regressors. S. James Press and Arnold Zellner 8 (1978) 307-321
- Optimal prediction* * Rational expectations and the econometric modeling of markets subject to uncertainty * A Bayesian approach. Sanford Grossman 3 (1975) 255-272
- Optimal sample size* * Bayesian analysis of ____ and a best decision rule for experiments in direct load control. Dennis J. Aigner 9 (1979) 209-221
- Optimality of least squares* in the seemingly unrelated regression equation model. T.D. Dwivedi and V.K. Srivastava 7 (1978) 391-395
- Option price* * The lag structure of ____ . S.T. Kassouf 4 (1976) 303-310
- Option values*, stipends and the returns to educational investment. Yochanan P. Comay, Arie Melnik and Moshe A. Pollatschek 6 (1977) 243-260
- Orcutt transformation* * Retention of trainees: A study with dichotomous dependent variables. Morley Gunderson 2 (1974) 79-93
- Ordinal data* * Correlations with ____ . David M. Grether 2 (1974) 241-246
- Ordinary and two-stage least squares* * Monte Carlo methodology and the small sample behaviour of ____ . David F. Hendry and Robin W. Harrison 2 (1974) 151-174
- Orthonormal regression model* * A Monte Carlo comparison of traditional and Stein-rule estimators under squared error loss. Thomas A. Yancey and George G. Judge 4 (1976) 285-294
- Overdifferencing* * Estimation of a non-invertible moving average process: The case of ____ . Charles I. Plosser and G. William Schwert 6 (1977) 199-224
- Parameters* * Omitted variables, variability of estimated ____ and the appearance of autocorrelated disturbances. Yash Pal Gupta and Esfandiar Maasoumi 9 (1979) 379-385
- Parameter asymptotics* * Some large-concentration-____ for the k -class estimators. Roberto S. Mariano 3 (1975) 171-177
- Parameter estimation*
- Estimation of functions of population means and regression coefficients including structural coefficients: A minimum loss (MELO) approach. Arnold Zellner 8 (1978) 127-158
- Information and computation in simultaneous equations estimation. Warren Dent 4 (1975) 89-95

- Seemingly unrelated nonlinear regressions. A. Ronald Gallant..... 3 (1975) 35-50
- The effect of temporal aggregation on ____ in distributed lag models.
William W.S. Wei..... 8 (1978) 237-246
- Parameter shift* * A Bayesian test of a ____ and an application. Hiroki Tsurumi..... 6 (1977) 371-380
- Parameter stability* * Some comparisons of tests for a shift in the slope of a multivariate linear time series model. John U. Farley, Melvin Hinich and Timothy W. McGuire..... 3 (1975) 297-318
- Parameter variation* * Estimation of a dynamic demand function for gasoline with different schemes for _____. Jatinder S. Mehta, Gorti V.L. Narasimham and Paravastu A.V.B. Swamy..... 7 (1978) 263-279
- Parametric restrictions*
Three-stage least-squares estimation for a system of simultaneous, nonlinear, implicit equations. A. Ronald Gallant..... 5 (1977) 71-88
- Pareto law*
Estimation of the ____ from underreported data: A further analysis. David V. Hinkley and Nagesh S. Revankar..... 5 (1977) 1-11
On the estimation of the ____ from under-reported data. Michael J. Hartley and Nagesh S. Revankar..... 2 (1974) 327-341
- Parking location and transit demand*: A case study of endogenous attributes in disaggregate mode choice models. Richard B. Westin and David W. Gillen..... 8 (1978) 75-101
- Partial adjustment-adaptive expectations model* * Inconsistency of the OLS estimation of the _____. H.E. Doran and W.E. Griffiths..... 7 (1978) 133-146
- Partially restricted reduced form*
On the existence of moment of the ____ estimators from a simultaneous-equation model. John L. Knight..... 5 (1977) 315-321
The bias and mean squared error of forecasts from _____. Anirudh L. Nagar and Surettam N. Sahay..... 7 (1978) 227-243
- Pascal distributed lag model* * A note on the Bayesian estimation of Solow's distributed lag model. Robert S. Guthrie..... 4 (1976) 295-300
- Periodic cubic spline formation* * Consumption patterns for electricity. Wallace Hendricks and Roger Koenker..... 5 (1977) 135-153
- Permanent income hypothesis* * Estimation of a model containing unobservable variables using grouped observations: An application to the _____. Clifford L.F. Attfield..... 6 (1977) 51-63
- Petroleum industry* * An econometric model of the _____. Patricia Rice and V. Kerry Smith..... 6 (1977) 263-287
- Point estimation*
A note on the Bayesian estimation of Solow's distributed lag model. Robert S. Guthrie..... 4 (1976) 295-300
Normalization in _____. Walter D. Fisher..... 4 (1976) 243-252
Normalization in _____, Comment, Reply and Rejoinder. Joseph B. Kadane and Walter D. Fisher..... 7 (1978) 123-129
- Policy instruments* * The relative impact of monetary and fiscal _____. Some structure-based estimates. B.T. McCallum..... 2 (1974) 283-299
- Policy mix considerations* * Non-interacting control of macroeconomic variables: Implications on _____. Masanao Aoki..... 2 (1974) 261-281
- Polynomial lags* * Rational and _____. The finite connection. Adrian Pagan..... 8 (1978) 247-254
- Polynomial operators* and the asymptotic distribution of dynamic multipliers. Leonard Gill and Sophocles N. Brissimis..... 7 (1978) 373-384
- Polynomial price response functions* * Specification and estimation of dynamic demand systems incorporating _____. An application to U.S. clothing imports. J. Stuart McMenamin and Jean-Paul Pinard.. 7 (1978) 147-162
- Polynomial technique* * Harmonic alternatives to the Almon _____. Susan S. Hamlen and William A. Hamlen, Jr..... 7 (1978) 57-66
- Poly-t densities* * Bayesian regression analysis using _____. Jacques H. Dreze..... 6 (1977) 329-354

- Pooling* * Estimation of variance after a preliminary test of homogeneity and optimal levels of significance for the pre-test. T. Toyoda and T.D. Wallace 3 (1974) 395-404
- Population means* * Estimation of functions of _____ and regression coefficients including structural coefficients: A minimum expected loss (MELO) approach. Arnold Zellner 8 (1978) 127-158
- Population R^2* * The use of R^2 to determine the appropriate transformation of regression variables. C.W.J. Granger and P. Newbold 4 (1976) 205-210
- Portfolio theory* * Spectral analysis of public utility returns. Michael A. Goldberg and Ashok Vora 6 (1977) 79-101
- Posterior conditional distribution* * A Bayesian test of the product cycle hypothesis applied to Japanese crude steel production. Hiroki Tsurumi 4 (1976) 371-392
- Posterior distributions*
- A Bayesian estimation of macro and micro CES production functions... 4 (1976) 1-25
- A note on the Bayesian estimation of Solow's distributed lag model. Robert S. Guthrie 4 (1976) 295-300
- Bayesian analysis of the Federal Reserve-MIT-Penn model's Almon lag consumption function. Arnold Zellner and Anne D. Williams 1 (1973) 267-299
- Bayesian estimation of a random coefficient model. William E. Griffiths, Ross G. Drynan and Surekha Prakash 10 (1979) 201-220
- On Bayesian and non-Bayesian estimation of a two-level CES production function for the Dutch manufacturing sector. Rins Harkema and Sybrand Schim van der Loeff 5 (1977) 155-165
- On Bayesian estimation of seemingly unrelated regressions when some observations are missing. P.A.V.B. Swamy and J.S. Mehta 3 (1975) 157-169
- Some aspects of bivariate regression subject to linear constraints. George C. Tiao and Wei-Yuan Tan 5 (1977) 13-35
- Posterior distribution* for the multiple correlation coefficient with fixed regressors. S. James Press and Arnold Zellner 8 (1978) 307-321
- Posterior expectations* * Estimation of functions of population means and regression coefficients including structural coefficients: A minimum expected loss (MELO) approach. Arnold Zellner 8 (1978) 127-158
- Posterior odds* * Time series analysis and simultaneous equation econometric models. Arnold Zellner and Franz Palm 2 (1974) 17-54
- Posterior odds analysis, Bayesian* * Discriminating between autoregressive forms: A Monte Carlo comparison of Bayesian and ad hoc methods. D.E.A. Giles 3 (1975) 229-248
- Post-sample prediction* * Gains in efficiency from joint estimation of systems of autoregressive moving average processes. Charles R. Nelson 4 (1976) 331-348
- Prais-Winsten method* * Autocorrelated disturbances in the light of specification analysis, Maitryi Chaudhuri (Mukherjee) 5 (1977) 265-293
- Prediction(s)*
- An econometric model of the petroleum industry. Patricia Rice and V. Kerry Smith 6 (1977) 263-287
- Bayesian assessment of the unconditional mean square error of repeated _____ from a regression equation. Nicholas J. Gonedes and Harry V. Roberts 2 (1974) 221-240
- Bayesian regression analysis using poly- t densities. Jacques H. Dreze 6 (1977) 329-354

- Retention of trainees: A study with dichotomous dependent variables. Morley Gunderson 7 (1974) 79-93
- The first-order moving average process: Identification, estimation and _____. Charles R. Nelson 2 (1974) 121-141
- The use of dummy variables to compute _____, prediction errors, and confidence intervals. David S. Salkever 4 (1976) 393-397

- Predictions from binary choice models*. Richard B. Westin..... 2 (1974) 1-16
- Predictions from binary choice models: A note*. Tony Lancaster..... 9 (1979) 387-389
- Prediction in the context of the variance-components model*. Allan J. Taub..... 10 (1979) 103-107
- Prediction, optimal* * Rational expectations and the econometric modelling of markets subject to uncertainty: A Bayesian approach. Sanford Grossman..... 3 (1975) 255-272
- Prediction, post-sample* * Gains in efficiency from joint estimation of systems of autoregressive moving average processes. Charles R. Nelson..... 4 (1976) 331-348
- Predictors of common stock price changes* * Chicago Board call options as _____. D. Panton..... 4 (1976) 101-113
- Predictor error* * The use of monthly and quarterly data in an ARMA model. F.A.G. Den Butter..... 4 (1976) 311-324
- Preliminary test estimators* * On choosing the optimal level of significance for the Durbin-Watson test and the Bayesian alternative. Thomas B. Fomby and David K. Guilkey..... 8 (1978) 203-213
- Preliminary test of homogeneity* * Estimation of variance of a ____ and optimal levels of significance for the pre-test. T. Toyoda and T.D. Wallace..... 3 (1976) 395-404
- Preliminary tests of significance*
- Properties of estimators after ____ when stochastic restrictions are used in regression. G.G. Judge, T.A. Yancey and M.E. Bock..... 1 (1973) 29-48
- Some comments on estimation in regression after _____. M.E. Bock, G.G. Judge and T.A. Yancey..... 1 (1973) 191-200
- Pretesting* * On the impact of the tests for serial correlation upon the test of significance for the regression coefficient. Alice Nakamura and Masao Nakamura..... 7 (1978) 199-210
- Pre-testing on part of the data*. T. Toyoda and T. Dudley Wallace..... 10 (1979) 119-123
- Price-adjustment mechanisms* * The lag structure of option price. S.T. Kassouf..... 4 (1976) 303-310
- Price adjustment model, neoclassical* * The relative impact of monetary and fiscal policy instruments: Some structure-based estimates. B.T. McCallum..... 2 (1974) 283-299
- Price changes* * Chicago Board call options as predictors of common stock. D. Panton..... 4 (1975) 101-113
- Price index*
- A two-level electricity demand model: Evaluation of the Connecticut time-of-day pricing test. J.A. Hausman, M. Kinnucan and D. McFadden..... 10 (1979) 263-289
- Exact and superlative index numbers. W.E. Diewert..... 4 (1976) 115-145
- Price indices, homogeneous and non-homogeneous* * Measurement of purchasing power of incomes with linear expansion data. S.N. Afriat..... 2 (1974) 343-364
- Price response functions* * Specification and estimation of dynamic demand systems incorporating polynomial _____. An application to U.S. clothing imports. J. Stuart McMenamin and Jean-Paul Pinard.. 7 (1978) 147-162
- Price series, disaggregated* * Modeling the price side of econometric models: An analysis of the underlying hypotheses. Salih N. Nefci..... 10 (1979) 71-84
- Price taking behaviour* * Testing _____. Elie Appelbaum..... 9 (1979) 283-294
- Pricing model, capital asset* * Spectral analysis of public utility analysis. Michael A. Goldberg and Ashok Vora..... 6 (1977) 79-101
- Principal components*
- Optimal instruments when the disturbances are small. Roger W. Klein. 9 (1979) 367-377
- Testing income series: An application of _____. C.L. Haddad..... 4 (1976) 27-40
- Prior distributions*
- Bayesian analysis of the Federal Reserve-MIT-Penn model's Almon lag consumption function. Arnold Zellner and Anne D. Williams..... 1 (1973) 267-299

- Bayesian assessment of the unconditional mean square error of repeated predictions from a regression equation. Nicholas J. Gonedes and Harry V. Roberts 2 (1974) 221-240
- Prior information* * Identification of simultaneous equation models with measurement error. Vincent J. Geraci..... 4 (1976) 263-283
- Prior probability density functions* * A Bayesian test of a parameter shift and an application. Hiroki Tsurumi 6 (1977) 371-380
- Prior restrictions*
- Identification and simultaneous equation models with measurement error. Vincent J. Geraci..... 4 (1976) 263-283
- The problem of identification in finite parameter continuous time models. P.C.B. Phillips..... 1 (1973) 351-362
- Probability distribution* * Option values, stipends and the returns to educational investment. Yochanon P. Comay, Arie Melnik and Moshe A. Pollatschek..... 6 (1977) 243-260
- Probability function, linear* * Retention of trainees: A study with dichotomous dependent variables. Morley Gunderson..... 2 (1974) 74-93
- Probability limits* * Estimation in the first-order moving average model through the finite autoregressive approximation: Some asymptotic results. Raul Pedro Mentz..... 6 (1977) 225-236
- Probit analysis*
- Estimation of some limited dependent variable models with application to housing demand. Lung-Fei Lee and Robert P. Trost 8 (1978) 357-382
- Retention of trainees: A study with dichotomous dependent variables. Morley Gunderson..... 2 (1974) 74-93
- Product cycle hypothesis* * A Bayesian test of the ____ applied to Japanese crude steel production. Hiroki Tsurumi..... 4 (1976) 371-392
- Production* * Canonical ridge and econometrics of joint _____. H.D. Vinod..... 4 (1976) 147-166
- Production and cost frontiers* * Estimating technical and allocative inefficiency relative to stochastic _____. Peter Schmidt and C.A. Knox Lovell..... 9 (1979) 343-366
- Production functions*
- A Bayesian estimation of macro and micro CES _____. Hiroki Tsurumi and Yoshi Tsurumi..... 4 (1976) 1-25
- A study of multiple-output _____. Klein's railroad study revisited. Georg Hasenkamp..... 4 (1976) 253-262
- Bayesian estimation of a random coefficient model. William E. Griffiths, Ross G. Drynan and Surekha Prakash..... 10 (1979) 201-220
- Duality theory and pitfalls in the specification of technologies. David F. Burgess..... 3 (1975) 105-121
- On testing weak separability. Alan D. Woodland..... 8 (1978) 383-398
- Stochastic specification of ____ and economic implications. Richard E. Just and Rulon D. Pope..... 7 (1978) 67-86
- The existence of a real value-added function in the Canadian manufacturing sector. Michael Denny and Doug May..... 5 (1977) 55-69
- The stochastic frontier ____ and average efficiency: An empirical analysis. Lung-Fei Lee and William G. Tyler..... 7 (1978) 385-389
- The translog function and the substitution of equipment, structures, and labor in U.S. manufacturing 1929-68. Ernst R. Berndt and Laurits R. Christensen..... 1 (1973) 81-114
- Production function models*
- A note on the influence of uncertainty on estimation of _____. Roger D. Blair and Rafael Lusky..... 3 (1975) 391-394
- Formulation and estimation of stochastic frontier _____. Dennis Aigner, C.A. Knox Lovell and Peter Schmidt..... 6 (1977) 21-37
- Production structures* * The demand for energy in Canadian manufacturing: An example of the estimation of ____ with many inputs. Melvyn A. Fuss..... 5 (1977) 89-110

- Production theory* * Testing neoclassical _____. Elie Appelbaum 7 (1978) 87-102
- Proxy variables*
- Errors in variables in simultaneous equation models. Jerry A. Hausman 5 (1977) 389-401
- Measurement errors and bounded OLS estimates. Maurice D. Levi 6 (1977) 165-171
- Modeling monetary policy as an unobserved variable. Robert B. Avery 10 (1979) 291-311
- MSE dominance of least squares with errors-of-observation. Dennis J. Aigner 2 (1974) 365-372
- Pseudo-inverse* * A note on the measurability of the _____. Peter Schonfeld 1 (1973) 313-314
- Public school teachers* * Discrimination in the market for _____. Joseph R. Antos and Sherwin Rosen 3 (1975) 123-150
- Public utility returns* * Spectral analysis of _____. Michael A. Goldberg and Ashok Vora 6 (1977) 79-101
- Purchasing power of incomes* * Measurement of ____ with linear expansion data. S.N. Afriat 2 (1974) 343-364
- Quadratic flexible form* * On testing separability restrictions with flexible functional forms. Charles Blackorby, Daniel Primont and R. Robert Russell 5 (1977) 195-209
- Quadratic forms* * The exact moments of the least squares estimator for the autoregressive model. Takamitsu Sawa 8 (1978) 159-172
- Quadratic loss functions* * Estimation of functions of population means and regression coefficients including structural coefficients: A minimum expected loss (MELO) approach. Arnold Zellner 8 (1978) 127-158
- Quadratic means* * Exact and superlative index numbers. W.E. Diewert 4 (1976) 115-145
- Quadratic risk functions* * Pre-testing on part of the data. T. Toyoda and T. Dudley Wallace 10 (1979) 119-123
- Quadratic unbiased estimators* * Best ____ of the variance-covariance matrix in normal regression. Pietro Balestro 1 (1973) 17-28
- Qualitative response models*
- On the characterization of a joint probability distribution by conditional distributions. Christian Gourieroux and Alain Monfort 10 (1979) 115-118
- The modified second-round estimator in the general _____. Takeshi Amemiya 5 (1977) 295-299
- Quandt λ -method* * A Markov model for switching regressions. Stephen M. Goldfeld and Richard E. Quandt 1 (1973) 3-16
- Quantal choice models* * Parking location and transit demand: A case study of endogenous attributes in disaggregate mode choice models. Richard B. Westin and David W. Gillen 8 (1978) 75-101
- Quantity index* * Exact and superlative index numbers. W.E. Diewert 4 (1976) 115-145
- Quasi-differencing restrictions* * Rational and polynomial lags: The finite connection. Adrian Pagan 8 (1978) 247-254
- R^2 * The use of ____ to determine the appropriate transformation of regression variables. C.W.J. Granger and P. Newbold 4 (1976) 205-210
- R^2 , generalized * Goodness-of-fit in the seemingly unrelated regressions models: A generalization. A. Buse 10 (1979) 109-113
- Rank conditions* * Identification of simultaneous equation models with measurement error. Vincent J. Geraci 4 (1976) 263-283
- Rank conditions for identification* * The graph of the k -class estimator: An algebraic and statistical interpretation. R.W. Farebrother and N.E. Savin 2 (1974) 373-388
- Random coefficient model(s)*
- Bayesian estimation of a _____. William E. Griffiths, Ross G. Drynan and Surekha Prakash 10 (1979) 201-220

- Estimation of a dynamic demand function for gasoline with different schemes of parameter variation. Jatinder S. Mehta, Gorti V.L. Narasimham and Paravastu A.V.B. Swamy..... 7 (1978) 263-279
- Random shocks* * On the structure of moving average process. Craig F. Ansley, W. Allen Spivey and William Wroblewski..... 6 (1977) 121-134
- Random walks* * Differencing of _____ and near random walks. Nicholas J. Gonedes and Harry V. Roberts..... 6 (1977) 289-308
- Ratio tests* * Generalized variance-_____ for serial correlation in multivariate regression models. Jerzy Szroeter..... 8 (1978) 47-59
- Ratio tests, nested likelihood* * Autocorrelation and dynamic methodology with an application to wage determination models. Lloyd R. Kenward..... 3 (1975) 179-187
- Rational and polynomial lags: The finite connection.* Adrian Pagan..... 8 (1978) 247-254
- Rational expectations*
- Market analysis with _____: Theory and estimation. R. LaVar Huntzinger..... 10 (1979) 127-145
- The analysis of seasonal economic models. Charles I. Plosser..... 10 (1979) 147-163
- Rational expectations and the econometric modelling of markets subject to uncertainty: A Bayesian approach.* Sanford Grossman..... 3 (1975) 255-272
- Reaction function*
- Modeling monetary policy as an unobserved variable. Robert B. Avery..... 10 (1979) 291-311
- A test of the endogeneity of monetary policy. Richard T. Froyen..... 2 (1974) 175-188
- Reconstruction matrices* * The reconstruction of index data in aggregative econometric models. Dit Sang Ho..... 10 (1979) 333-359
- Recurions for the two-stage least-squares estimators.* Garry D.A. Phillips..... 6 (1977) 65-77
- Recursive decision systems* * A class of dynamic models for describing and projecting industrial development. Richard H. Day and Jon P. Nelson..... 1 (1973) 155-190
- Recursive equations* * Estimation of a model containing unobservable variables using grouped observations: An application to the permanent income hypothesis. Clifford L.F. Attfield..... 6 (1977) 51-63
- Recursive optimization models* * Chicago Board call options as predictors of common stock price changes. D. Panton..... 4 (1976) 101-113
- Recursive residuals* * Testing for functional misspecification in regression analysis. Andrew C. Harvey and Patrick Collier..... 6 (1977) 103-119
- Recursive triangulation* * Information and computation in simultaneous equations estimation. Warren Dent..... 4 (1976) 89-95
- Reduced form*
- Time series analysis and simultaneous equation econometric models. Arnold Zellner and Franz Palm..... 2 (1974) 17-54
- The bias and mean squared error of forecasts from partially restricted _____. Anirudh L. Nagar and Surottam N. Sahary..... 7 (1978) 227-243
- Reduced form coefficients* * Estimation of functions of population means and regression coefficients including structural coefficients: A minimum expected loss (MELO) approach. Arnold Zellner..... 8 (1978) 127-158
- Reduced form covariance matrix* * Estimation of a model containing unobservable variables using grouped observations: An application to the permanent income hypothesis. Clifford L.F. Attfield..... 6 (1977) 51-63
- Reduced form demand equation* * On estimation of an econometric model of short-run bank behaviour. Dennis J. Aigner..... 1 (1973) 201-228
- Reduced form estimates* * The relative impact of monetary and fiscal policy instruments: Some structure-based estimates. B.T. McCallum.. 2 (1974) 283-299
- Reduced form estimators* * On the existence of moments of the partially restricted _____ from a simultaneous-equation model. John L. Knight..... 5 (1977) 315-321
- Reduced form expansion path cost model* * Parking location and transit demand: A case study of endogenous attributes in disaggregate mode choice models. Richard B. Westin and David W. Gillen..... 8 (1978) 75-101

Regression(s)

- A Markov model for switching _____. Stephen M. Goldfeld and Richard E. Quandt 1 (1973) 3-16
- A note on extraneous information in _____. Richard Brook and T.D. Wallace 1 (1973) 315-316
- Best quadratic unbiased estimators of the variance-covariance matrix in normal _____. Pietro Balestra 1 (1973) 17-28
- Measurement errors and bounded OLS estimates. Maurice D. Levi 6 (1977) 165-171
- On obtaining the right sign of a coefficient estimate by omitting a variable from the _____. Ignazio Visco 7 (1978) 115-117
- On the sampling distribution of improved estimators for coefficients in linear _____. Aman Ullah 2 (1974) 143-150
- Properties of estimators after preliminary tests of significance when stochastic restrictions are used in _____. G.G. Judge, T.A. Yancey and M.E. Bock 1 (1973) 29-48
- Some comments on estimation in ____ after preliminary tests of significance. M.E. Bock, G.G. Judge and T.A. Yancey 1 (1973) 191-200
- Spurious ____ in econometrics. C.W.J. Granger and P. Newbold 3 (1974) 111-120
- Regression* using mixed annual and quarterly data. Christopher L. Gilbert 5 (1977) 221-239
- Regression* with a binary independent variable subject to errors of observation. Dennis J. Aigner 1 (1973) 49-60
- Regression analysis*
- Abrahamse and Koerts' 'new estimator' of disturbances in _____. Heinz Neudecker 5 (1977) 129-133
- Bayesian ____ using poly- t densities. Jacques H. Dreze 6 (1977) 329-354
- Testing for functional misspecification in _____. Andrew C. Harvey and Patrick Collier 6 (1977) 103-119
- Regression coefficient(s)*
- Estimation of functions of population means and ____ including structural coefficients: A minimum expected loss (MELO) approach. Arnold Zellner 8 (1978) 127-158
- On the impact of the tests for serial correlation upon the test of significance for the _____. Alice Nakamura and Masao Nakamura 7 (1978) 199-210
- Regression estimators* * A comparative study of finite sample properties of band spectrum _____. Svend Hylleberg 5 (1977) 167-182
- Regression equation(s)*
- Bayesian assessment of the unconditional mean square error of repeated predictions from a _____. Nicholas J. Gonedes and Harry V. Roberts 2 (1974) 221-240
- Estimation of common coefficients in two _____. P.A.V.B. Swamy and J.S. Mehta 10 (1979) 1-14
- Regression model(s)*
- Censored ____ with unobserved, stochastic censoring thresholds. Forrest D. Nelson 6 (1977) 309-327
- Discriminating between autoregressive forms: A Monte Carlo comparison of Bayesian and ad hoc methods. D.E.A. Giles 3 (1974) 229-248
- Weaker MSE criteria and tests for linear restrictions in ____ with non-spherical disturbances. Marjorie B. McElroy 6 (1977) 389-394
- Regression, ridge* * Canonical ridge and econometrics of joint production. H.D. Vinod 4 (1976) 147-166
- Regression variables* * The use of R^2 to determine the appropriate transformation of _____. C.W.J. Granger and P. Newbold 4 (1976) 205-210
- Regressors*
- Forecasting in dynamic models with stochastic _____. David A. Pierce.. 3 (1975) 349-374
- Single-equation estimators and aggregation restrictions when equations have the same set of _____. Frank T. Denton 8 (1978) 173-179
- Relative efficiencies* of some simple Bayes estimators of coefficients in dynamic models - I. P.A.V.B. Swamy and Paul N. Rappoport 3 (1975) 273-296

- Relative efficiencies of some simple Bayes estimators of coefficients in a dynamic equation with serially correlated errors - II.* P.A.V.B. Swamy and Paul N. Rappoport..... 7 (1978) 245-258
- Remainders * The effects of various treatments of truncation _____ on tests of hypotheses in distributed lag models.* Peter Schmidt and David K. Guilkey..... 4 (1976) 211-230
- Repeated predictions * Bayesian assessment of the unconditional mean square error of _____ from a regression equation.* Nicholas J. Gonedes and Harry V. Roberts 2 (1974) 221-240
- Residential demand for electricity*
- Consumption patterns for electricity. Wallace Hendricks and Roger Koenker..... 5 (1977) 135-153
- Modelling and forecasting time-of-day and seasonal electricity demand. *Annals of Applied Econometrics* (edited by A. Lawrence and D. Aigner)..... 9 (1979) 1-240
- On modelling the _____ by time-of-day. Lester D. Taylor..... 9 (1979) 97-115
- Responsiveness to time-of-day electricity pricing: First empirical results. Scott E. Atkinson..... 9 (1979) 79-95
- The _____ with time-of-day pricing. Anthony Lawrence and Steven Braithwait 9 (1979) 59-77
- Residential demand for electricity: An econometric approach.* Wallace Hendricks, Roger Koenker and Dale J. Poirier..... 9 (1979) 33-57
- Residential load curves and time-of-day pricing: An econometric analysis.* Clive W.J. Granger, Robert Engle, Ramu Ramanathan and Allan Andersen 9 (1979) 13-32
- Residual-adjusted Aitken estimator*
- An efficient two-step estimator for the dynamic adjustment model with autoregressive errors. Michio Hatanaka..... 2 (1974) 199-220
- A note on an efficient two-step estimator. Phoebus Dhrymes..... 2 (1974) 301-304
- Residual analysis*
- Bayesian regression analysis using poly-*t* densities. Jacques H. Dreze..... 6 (1977) 329-354
- The first-order moving average process: Identification, estimation and prediction. Charles R. Nelson..... 2 (1974) 121-141
- Residuals from linear models * Uncorrelated _____.* Warren T. Dent and George P.H. Styan..... 7 (1978) 211-225
- Residual sum of squares * Regressions for the two-stage least squares estimators.* Garry D.A. Phillips..... 5 (1977) 65-77
- Residuals, recursive * Testing for functional misspecification in regression analysis.* Andrew C. Harvey and Patrick Collier..... 6 (1977) 103-119
- Residual series, univariate * Causality in temporal systems: Characterizations and a survey.* David A. Pierce and Larry D. Haugh..... 5 (1977) 265-293
- Response functions * Specification and estimation of dynamic demand systems incorporating polynomial price: An application to U.S. clothing imports.* J. Stuart McMenamin and Jean-Paul Pinard 7 (1978) 147-162
- Response model * The modified second-round estimator in the general qualitative _____.* Takeshi Amemiya..... 5 (1977) 295-299
- Response surface methodology * Chicago Board call options as predictors of common stock price changes.* D. Panton 4 (1976) 101-113
- Restricted reduced form*
- On the existence of moments of the partially _____ estimators from a simultaneous-equation model. John L. Knight..... 5 (1977) 315-321
- The bias and mean squared error of forecasts from partially _____. Anirudh L. Nagar and Surottam N. Sahay 7 (1978) 227-243
- Restricted least-squares estimates * A result on the sign of _____.* Edward E. Leamer 3 (1975) 387-390
- Restrictions*
- Mean square error tests for _____ in singular linear models. Burt S. Holland..... 6 (1977) 355-363

- On testing separability _____ with flexible functional forms. Charles Blackorby, Daniel Primont and R. Robert Russell..... 5 (1977) 195-209
- Properties of estimators after preliminary tests of significance when stochastic _____ are used in regression. G.G. Judge, T.A. Yancey and M.E. Bock..... 1 (1973) 29-48
- Single equation estimators and aggregation _____ when equations have the same set of regressors. Frank T. Denton..... 8 (1978) 173-179
- The structural identifiability of linear models with autocorrelated errors in the case of cross-equations _____. Manfred Deistler 8 (1978) 23-31
- Weaker MSE criteria and tests for linear _____ in regression models with non-spherical disturbances. Marjorie B. McElroy 6 (1977) 389-394
- Returns to educational investment* * Option values, stipends and the _____. Yochanan P. Comay, Arie Melnik and Moshe A. Pollatschek . 6 (1977) 243-260
- Riemann sum* * Determining the final form of a linear dynamic econometric model. Piet de Jong 8 (1978) 181-192
- Ridge* * Canonical _____ and econometrics of joint production. H.D. Vinod 4 (1976) 147-166
- Ridge regression*
- Relative efficiencies of some simple Bayes estimators of coefficients in a dynamic equation with serially correlated errors - II. Paravastu A.V.B. Swamy and Paul N. Rappoport..... 7 (1978) 245-258
- Single-equation estimators and aggregation restrictions when equations have the same sets of regressors. Frank T. Denton 8 (1978) 173-179
- Risk*
- Estimation of functions of population means and regression coefficients including structural coefficients: A minimum expected loss (MELO) approach. Arnold Zellner 8 (1978) 127-158
- Stochastic specification of production functions and economic implications. Richard E. Just and Rulon D. Pope 7 (1978) 67-86
- Properties of estimators after preliminary tests of significance when stochastic restrictions are used in regression. G.G. Judge, T.A. Yancey and M.E. Bock 1 (1973) 29-48
- Risk functions*
- A Monte Carlo comparison of traditional and Stein-rule estimators under squared error loss. Thomas A. Yancey and George G. Judge... 4 (1976) 285-294
- Pre-testing on part of the data. T. Toyoda and T. Dudley Wallace 10 (1979) 119-123
- Risk matrices* * Some comments on estimation in regression after preliminary tests of significance. M.E. Bock, G.G. Judge and T.A. Yancey 1 (1973) 191-200
- Risk preferences, non-neutral* * A note on the influence of uncertainty on estimation of production function models. Roger D. Blair and Rafael Lusky 3 (1975) 391-394
- Robust estimators* * Maximum score estimation of the stochastic utility model of choice. Charles F. Manski..... 3 (1975) 205-228
- Robustness* * Testing for functional misspecification in regression analysis. Andrew C. Harvey and Patrick Collier 6 (1977) 103-119
- Rotterdam model*
- A comparative study of complete systems of demand functions. N. Anders Klevmarken 10 (1979) 165-191
- Generalized variance-ratio tests for serial correlation in multivariate regression models. Jerzy Szroeter..... 8 (1978) 47-59
- Rowley-Wilton moving average specification* * Autocorrelation and dynamic methodology with an application to wage determination models. Lloyd R. Kenward 3 (1975) 179-187
- Sample distribution* * An approximation to the finite _____ of Zellner's seemingly unrelated regression estimator. Peter C.B. Phillips 6 (1977) 147-163

- Sample properties* * A comparative study of finite ____ of band spectrum regression estimators. Svend Hylleberg 5 (1977) 167-182
- Sample space* * Causality in temporal systems: Characterizations and a survey. David A. Pierce and Larry D. Haugh 5 (1977) 265-293
- Sampling characteristics* * Properties of estimators after preliminary tests of significance when stochastic restrictions are used in regression. G.G. Judge, T.A. Yancey and M.E. Bock 1 (1973) 29-48
- Sampling distribution*
 On the ____ of improved estimators for coefficients in linear regression. Aman Ullah 2 (1974) 143-150
 The ____ of forecasts from a first-order autoregression. Peter C.B. Phillips 9 (1979) 241-261
- Sampling experiments* * Stochastic specification and the estimation of share equations. A.D. Woodland 10 (1979) 361-383
- Sampling for ARMA and ARMAX models* * Some consequences of temporal aggregation and systematic _____. K.R.W. Brewer 1 (1973) 133-154
- Sampling theory*
 Estimation of common coefficients in two regression equations. P.A.V.B. Swamy and J.S. Mehta 10 (1979) 1-14
 Estimation of seemingly unrelated regressions with unequal numbers of observations. Peter Schmidt 5 (1977) 365-377
 On Bayesian estimation of seemingly unrelated regressions when some observations are missing. P.A.V.B. Swamy and J.S. Mehta 3 (1975) 157-169
 Some aspects of bivariate regression subject to linear constraints. George C. Tiao and Wei-Yuan Tan 5 (1977) 13-35
- Sampling theory estimators* * A Monte Carlo comparison of traditional and Stein-rule estimators under squared error loss. Thomas A. Yancey and George G. Judge 4 (1976) 285-294
- Sargan-Dreetskis model* * Incomplete observations and simultaneous-equations models. Marcel G. Dagenais 4 (1976) 231-241
- Scaling* * Multidimensional ____: Some econometric applications. Shlomo Maital 8 (1978) 33-46
- Score estimation* * Maximum ____ of the stochastic utility model of choice. Charles F. Manski 3 (1975) 205-228
- Scoring* * The modified second-round estimator in the general qualitative response model. Takeshi Amemiya 5 (1977) 295-299
- Seasonal adjustment* * A comparative study of finite sample properties of band spectrum regression estimators. Svend Hylleberg 5 (1977) 167-182
- Seasonal economic models* * The analysis of _____. Charles I. Plosser 10 (1979) 147-163
- Seasonal electricity demand* * Modelling and forecasting time-of-day and _____. Annals of Applied Econometrics (edited by A. Lawrence and D. Aigner) 9 (1979) 1-240
- Seasonality* * Forecasting aggregates of independent ARIMA processes. David E. Rose 5 (1977) 323-345
- Second-order autoregressive error models* * Estimation of full maximum likelihood _____. Charles M. Beach and James G. MacKinnon 7 (1978) 187-198
- Seemingly unrelated nonlinear regressions*. A. Ronald Gallant 3 (1975) 35-50
- Seemingly unrelated regressions*
 Estimation of ____ equations: A brief survey. V.K. Srivastava and T.D. Dwivedi 10 (1979) 15-32
 Estimation of ____ with unequal numbers of observations. Peter Schmidt 5 (1977) 365-377
 Goodness of fit for ____: Glahn's $R^2_{y,x}$ and Hooper's $\bar{r}^2$. Marjorie B. McElroy 6 (1977) 381-387
 Goodness of fit in the ____ model: A generalization. A. Buse 10 (1979) 109-113
 On Bayesian estimation of ____ when some observations are missing. P.A.V.B. Swamy and J.S. Mehta 3 (1975) 157-169
 Weaker MSE criteria and tests for linear restrictions in regression models with non-spherical disturbances. Marjorie B. McElroy 6 (1977) 389-394

Seemingly unrelated regression equations

- Alternative tests for a first-order vector autoregressive error specification. David K. Guilkey 2 (1974) 95-104
- The efficiency of an improved method of estimating _____. V.K. Srivastava..... 1 (1973) 341-350
- Seemingly unrelated regression equation model* * Optimality of least squares in the _____. T.D. Dwivedi and V.K. Srivastava..... 7 (1978) 391-395
- Seemingly unrelated regression estimator* * An approximation to the finite sample distribution of Zellner's _____. Peter C.B. Phillips..... 6 (1977) 147-164
- Seemingly unrelated regression systems* * A note on the estimation of _____. Peter Schmidt..... 7 (1978) 259-261

Separability

- On testing ____ restrictions with flexible functional forms. Charles Blackorby, Daniel Primont and R. Robert Russell..... 5 (1977) 195-209
- The existence of a real value-added function in the Canadian manufacturing sector. Michael Denny and Doug May..... 5 (1977) 55-69
- On testing weak _____. Alan D. Woodland..... 8 (1978) 383-398
- The translog function and the substitution of equipment, structures, and labor in U.S. manufacturing 1929-1968. Ernst R. Berndt and Laurits R. Christensen..... 1 (1973) 81-114

Serial correlation

- Generalized variance-ratio tests for ____ in multivariate regression models. Jerzy Szroeter..... 8 (1978) 47-59
- On the impact of the tests for ____ upon the test of significance for the regression coefficient. Alice Nakamura and Masao Nakamura..... 7 (1978) 199-210
- Testing for autocorrelation in the autoregressive moving average error model. John Fitts 1 (1973) 363-376
- Testing for functional misspecification in regression analysis. Andrew C. Harvey and Patrick Collier..... 6 (1977) 103-119
- The small sample bias of Durbin's tests for ____: When one of the regressors is the lagged dependent variable and the null hypothesis is true. Byron G. Spencer..... 3 (1975) 249-254
- Serially correlated errors* * Relative efficiencies of some simple Bayes estimators of coefficients in a dynamic equation with ____ - II. P.A.V.B. Swamy and Paul N. Rappoport..... 7 (1978) 245-258

Share equations

- Estimating U.S. consumer preferences for meat with a flexible utility function. Laurits R. Christensen and Marilyn E. Manser 5 (1977) 37-53
- Stochastic specification and the estimation of _____. A.D. Woodland..... 10 (1979) 361-383
- Sharpe-Lintner model* * Spectral analysis of public utility returns. Michael A. Goldberg and Ashok Vora..... 6 (1977) 79-101
- Shiller estimator* * Smooth distributed lag estimators and smoothing spline functions in Hilbert Spaces. Corrado-Corradi..... 5 (1977) 211-219
- Shock-error model* * Identification of simultaneous equation models with measurement error. Vincent J. Geraci..... 4 (1976) 263-282
- Short-run bank behaviour* * On estimation of an econometric model of _____. Dennis J. Aigner 1 (1973) 201-228
- Shrinkage* * Bayesian assessment of the unconditional mean square error of repeated predictions from a regression equation. Nicholas J. Gonedes and Harry V. Roberts 2 (1974) 221-240

Sign tests

- A result on the sign of restricted least-squares estimates. Edward E. Leamer..... 3 (1975) 387-390
- On obtaining the right sign of a coefficient estimate by omitting a variable from the regression. Ignazio Visco..... 7 (1978) 115-117
- Testing for functional misspecification in regression analysis. Andrew C. Harvey and Patrick Collier..... 6 (1977) 103-119

Significance

- Estimation of variance after a preliminary test of homogeneity and optimal levels of ____ for the pre-test. T. Toyoda and T.D. Wallace. 3 (1975) 395-404
- On choosing the optimal level of ____ for the Durbin-Watson test and the Bayesian alternative. Thomas B. Fomby and David K. Guilkey. 8 (1978) 203-213
- On the impact of the tests for serial correlation upon the test of ____.
- Alice Nakamura and Masao Nakamura. 7 (1978) 199-210
- Significance points* * Fourth-order autocorrelation: Further ____ for the Wallis test. D.E.A. Giles and M.L. King. 8 (1978) 255-259
- Simulation experiments* * Experience with using the Box-Cox transformation when forecasting economic time series. Harold L. Nelson, Jr. and C.W.J. Granger. 10 (1979) 57-69
- Simultaneous approach* * Estimation and testing for functional forms and autocorrelation: A ____.
- N.E. Savin and Kenneth J. White. 8 (1978) 1-12
- Simultaneous equations* * First-order identification in linear models. Alain Monfort. 7 (1978) 333-350
- Simultaneous equations, dynamic* * Local and global identification and strong consistency in time series models. R. Kohn. 8 (1978) 269-283
- Simultaneous equation econometric models*
- Time series analysis and ____.
- Arnold Zellner and Franz Palm. 2 (1974) 17-54
- On univariate time series methods and ____.
- Franz Palm. 5 (1977) 379-388
- Simultaneous equations estimation* * Information and computation in ____.
- Warren Dent. 4 (1976) 89-95
- Simultaneous equations estimators* * The structure of ____.
- David F. Hendry. 4 (1976) 51-88
- Simultaneous equation models*
- Asymptotic properties of full information estimators in dynamic autoregressive ____.
- Phoebus J. Dhrymes and H. Erlat. 2 (1974) 247-259
- Errors in variables in ____.
- Jerry A. Hausman. 5 (1977) 389-401
- FIML estimation of the dynamic ____ with ARMA disturbances.
- Greg Reinsel. 9 (1979) 263-281
- Identification of ____ with measurement error. Vincent J. Geraci. 4 (1976) 263-283
- Incomplete observations and ____.
- Marcel G. Dagenais. 4 (1976) 231-241
- On the computational competitiveness of full-information maximum-likelihood and three-stage least-squares in the estimation of nonlinear ____.
- David A. Belsley. 9 (1979) 315-342
- On testing hypotheses in ____.
- Alison Morgan and Walter Vandaele. 2 (1974) 55-65
- On the existence of moments of the partially restricted reduced-form estimators from a ____.
- John L. Knight. 5 (1977) 315-321
- Recursions for the two-stage least-squares estimators.
- Garry D.A. Phillips. 6 (1977) 65-77
- Several efficient two-step estimators for the dynamic ____ with autoregressive disturbances.
- Michio Hatanaka. 4 (1976) 189-204
- Testing the exogeneity specification in the complete dynamic ____.
- John Geweke. 7 (1978) 163-185
- The bias and mean squared error of forecasts from partially restricted reduced form.
- Anirudh L. Nagar and Surendra N. Sahay. 7 (1978) 227-243
- The existence of moments of some simple Bayes estimators of coefficients in a ____.
- Jatinder S. Mehta and Paravastu A.V.B. Swamy. 7 (1978) 1-13
- The nonlinear two-stage least-squares estimator.
- Takeshi Amemiya. 2 (1974) 105-110
- Simultaneous equation systems*
- A new class of limited-information estimators for ____.
- Wouter J. Keller. 3 (1975) 71-92
- A ____ of money demand and supply using generalized functional forms.
- John J. Spitzer. 5 (1977) 117-128
- Coefficients of correlation for ____.
- Richard A.L. Carter and Anirudh L. Nagar. 6 (1977) 39-50

- On the efficient estimation methods for the macro-economic models nonlinear in variables. Michio Hatanaka..... 8 (1978) 323-356
- The mean square error of a combined estimator and numerical comparison with the TSLS estimator. Takamitsu Sawa..... 1 (1973) 115-132
- Simultaneous model* * Parking location and transit demand: A case study of endogenous attributes in disaggregate mode choice models. Richard B. Westin and David W. Gillen..... 8 (1978) 75-101
- Simultaneous, nonlinear, implicit equations* * Three-stage least-squares estimation for a system of _____. A. Ronald Gallant..... 5 (1977) 71-88
- Simultaneous systems* * An econometric model of the petroleum industry. Patricia Rice and V. Kerry Smith..... 6 (1977) 263-287
- Simultaneous system estimation* * K-matrix-class estimators and the full information maximum-likelihood as a special case. Werner Scharf..... 4 (1976) 41-50
- Single-equation estimators* and aggregation restrictions when equations have the same sets of regressors. Frank T. Denton 8 (1978) 173-179
- Single-equation least-squares* * An approximation to the finite sample distribution of Zellner's seemingly unrelated regression estimator. Peter C.B. Phillips..... 6 (1977) 147-164
- Single value composition* * Information and computation in simultaneous equations estimation. Warren Dent..... 4 (1976) 89-95
- Singularity*
- A note on least squares estimation and the BLUE in a generalized linear regression model. Peter Schonfeld..... 3 (1975) 189-197
- Mean square error tests for restrictions in singular linear models. Burt S. Holland..... 6 (1977) 355-363
- Slope of a multivariate linear time series model* * Some comparisons of tests for a shift in the _____. John U. Farley, Melvin Hinich and Timothy W. McGuire..... 3 (1975) 297-318
- Small samples* * The effects of various treatments of truncation remainders on tests of hypotheses in distributed lag models. Peter Schmidt and David K. Guilkey..... 4 (1976) 211-230
- Small sample behaviour* * Monte Carlo methodology and the ____ of ordinary and two-stage least-squares. David F. Hendry and Robin W. Harrison..... 2 (1974) 151-174
- Small sample bias* * The ____ of Durbin's tests for serial correlation: When one of the regressors is the lagged dependent variable and the null hypothesis is true. Byron G. Spencer..... 3 (1975) 249-254
- Small sample properties*
- Estimation of a dynamic system of seemingly unrelated regressions with autoregressive disturbances. David E. Spencer..... 10 (1979) 227-241
- Hypothesis testing based on goodness-of-fit in the moving average time series model. Charles R. Nelson and Gary S. Shea..... 10 (1979) 221-226
- Some ____ of estimators and test statistics in the multivariate logit model. David K. Guilkey and Peter Schmidt..... 10 (1979) 33-42
- Smoothing spline functions* * Smooth distributed lag estimators and ____ in Hilbert spaces. Corrado Corradi..... 5 (1977) 211-219
- Solow's distributed lag model* * A note on the Bayesian estimation of _____. Robert S. Guthrie..... 4 (1976) 295-300
- Spatial distribution* * Discrimination in the market for public school teachers. Joseph R. Antos and Sherwin Rosen 3 (1976) 123-150
- Specification*
- Duality theory and pitfalls in the ____ of technologies. David F. Burgess..... 3 (1975) 105-121
- Stochastic ____ and the estimation of share equations. A.D. Woodland..... 10 (1979) 361-383
- Testing the exogeneity ____ in the complete dynamic simultaneous equation model. John Geweke..... 7 (1978) 163-185
- The use of monthly and quarterly data in an ARMA model. F.A.G. Den Butter..... 4 (1976) 311-324

- Specification and estimation of dynamic demand systems incorporating polynomial price response functions: An application to U.S. clothing imports.* J. Stuart McMenamin and Jean-Paul Pinard 7 (1978) 147-162
- Specification analysis*
- An econometric model of the Australian economy. C.I. Higgins and V.W. Fitzgerald 1 (1973) 229-265
- Autocorrelated disturbances in the light of _____. Maitreyi Chaudhuri (Mukherjee) 5 (1977) 265-293
- Omitted variables, variability of estimated parameters and the appearance of autocorrelated disturbances. Yash Pal Gupta and Esfandiar Maasoumi 9 (1979) 379-385
- Stochastic _____ of production functions and economic implications. Richard E. Just and Rulon D. Pope 7 (1978) 67-86
- Specification error*
- On the consequences of planning _____ for the estimation of dynamic models. Roger T. Betancourt 6 (1977) 237-242
- Stochastic specification and the estimation of share equations. A.D. Woodland 10 (1979) 361-383
- Spectral analysis of public utility returns.* Michael A. Goldberg and Ashok Vora 6 (1977) 79-101
- Spectral density matrix* * The problem of identification in finite parameter continuous time models. P.C.B. Phillips 1 (1973) 351-362
- Spectrum regression estimators* * A comparative study of finite sample properties of band _____. Svend Hylleberg 5 (1977) 167-182
- Splines* * On the use of bilinear _____ in economics. Dale J. Poirier 3 (1975) 23-34
- Spline formation, cubic* * Consumption patterns for electricity. Wallace Hendricks and Roger Koenker 5 (1977) 135-153
- Spline functions* * Smooth distributed lag estimators and smoothing _____ in Hilbert spaces. Corrado Corradi 5 (1977) 211-219
- Spurious regressions* in econometrics. C.W.J. Granger and P. Newbold 2 (1974) 111-120
- Squared error loss*
- A Monte Carlo comparison of traditional and Stein-rule estimators under _____. Thomas A. Yancey and George G. Judge 4 (1976) 285-294
- Properties of estimators after preliminary tests of significance when stochastic restrictions are used in regression. G.G. Judge, T.A. Yancey and M.E. Bock 1 (1973) 29-48
- Relative efficiencies of some simple Bayes estimators of coefficients in a dynamic equation with serially correlated errors - II. Paravastu A.V.B. Swamy and Paul N. Rappoport 7 (1978) 245-258
- Squared error matrix loss function* * Optimal instruments when the disturbances are small. Roger W. Klein 9 (1979) 367-377
- Stability* * Testing unstable econometric models for _____: An empirical study. Elizabeth F. Gustafson 8 (1978) 193-201
- Stabilization actions* * A test of the endogeneity of monetary policy. Richard T. Froyen 2 (1974) 175-188
- Standard error, asymptotic* * The graph of the k -class estimator: An algebraic and statistical interpretation. R.W. Farebrother and N.E. Savin 2 (1974) 373-388
- Stationarity* * Differencing of random walks and near random walks. Nicholas J. Gonedes and Harry V. Roberts 6 (1977) 289-308
- Stationarity conditions* * Full maximum likelihood estimation of second-order autoregressive error models. Charles M. Beach and James G. MacKinnon 7 (1978) 187-198
- Stationarity restrictions* * A Monte Carlo study of autoregressive integrated moving average processes. Warren Dent and An-Sik Min 7 (1978) 23-55
- Steam-electric generating plants* * Estimating technical and allocative inefficiency relative to stochastic production and cost frontiers. Peter Schmidt and C.A. Knox Lovell 9 (1979) 343-366

- Stein-rule estimators* * A Monte Carlo comparison of traditional and _____ under squared error loss. Thomas A. Yancey and George G. Judge..... 4 (1976) 285-294
- Stipends* * Option values, _____ and the returns to educational investment. Yochanan P. Comay, Arie Melnik and Moshe A. Pollatschek.. 6 (1977) 243-260
- Stochastic censoring thresholds* * Censored regression models with unobserved _____. Forrest D. Nelson..... 6 (1977) 309-327
- Stochastic demand* * Multi-period pricing with _____. Robert E. Dansby... 9 (1979) 223-237
- Stochastic difference equations* * Least squares and _____. Bernt P. Stigum..... 4 (1976) 349-370
- Stochastic frontier production function*
The _____ and average efficiency: An empirical analysis. Lung-Fei Lee and William G. Tyler..... 7 (1978) 385-389
Formulation and estimation of _____ models. Dennis J. Aigner, C.A. Knox Lovell and Peter Schmidt..... 6 (1977) 21-37
- Stochastic production and cost frontiers* * Estimating technical and allocative inefficiency relative to _____. Peter Schmidt and C.A. Knox Lovell..... 9 (1979) 343-366
- Stochastic regressors* * Forecasting in dynamic models with _____. David A. Pierce..... 3 (1974) 349-374
- Stochastic restrictions* * Properties of estimators after preliminary tests of significance when _____ are used in regression. G.G. Judge, T.A. Yancey and M.E. Bock..... 1 (1973) 29-48
- Stochastic simulation* * An econometric model of the Australian economy. C.I. Higgins and V.W. Fitzgerald..... 1 (1973) 229-265
- Stochastic specification*
Identification of simultaneous equation models with measurement error. Vincent J. Geraci..... 4 (1976) 263-283
The error components model: Conditions for the existence of the maximum likelihood estimators. Korhan Berzeg..... 10 (1979) 99-102
- Stochastic specification of production functions and economic implications.* Richard E. Just and Rulon D. Pope..... 7 (1978) 67-86
- Stochastic utility model* * Maximum score estimation of the _____ of choice. Charles F. Manski..... 3 (1975) 205-228
- Stock price changes* * Chicago Board call options as predictors of common _____. D. Panton..... 4 (1976) 101-113
- Stone-Geary utility function* * On the consequences of planning specification error for the estimation of dynamic models. Roger R. Betancourt..... 6 (1977) 237-242
- Structure-based estimates* * The relative impact of monetary and fiscal policy instruments: Some _____. B.T. McCallum..... 2 (1974) 283-299
- Structural change* * On the use of bilinear splines in economics. Dale J. Poirier..... 3 (1975) 23-34
- Structural coefficients* * Estimation of functions of population means and regression coefficients including _____. A minimum expected loss (MELO) approach. Arnold Zellner..... 8 (1978) 127-158
- Structural identifiability* * The _____ of linear models with autocorrelated errors in the case of cross-equation restrictions. Manfred Deistler..... 8 (1978) 23-31
- Structural models* * The analysis of seasonal economic models. Charles I. Plosser..... 10 (1979) 147-163
- Structural parameters* * Estimation of a model containing unobservable variables using grouped observations: An application to the permanent income hypothesis. Clifford L.F. Attfield..... 6 (1977) 51-63
- Student-k kernels* * Bayesian regression analysis using poly-*t* densities. Jacques H. Dreze..... 6 (1977) 329-354
- Student-k distributions, multivariate* * A Bayesian test of a parameter shift and an application. Hiroki Tsurumi..... 6 (1977) 371-380
- Suits model* * Estimation in a disequilibrium model and the value of information. Stephen E. Goldfeld and Robert E. Quandt..... 3 (1975) 325-348

- Sum of squares, residual* * Recursions for the two-stage least-squares estimators. Garry D.A. Phillips..... 6 (1977) 65-77
- Superlative index numbers* * Exact and _____. W.E. Diewert..... 4 (1976) 115-145
- Switching regressions*
- A Markov model for _____. Stephen M. Goldfeld and Richard E. Quandt..... 1 (1973) 3-16
- Estimation of some limited dependent variable models with application to housing demand. Lung-Fei Lee and Robert P. Trost..... 8 (1978) 357-382
- Systematic sampling* * Some consequence of temporal aggregation and _____. K.R.W. Brewer..... 1 (1973) 133-154
- Systems of autoregressive moving average processes* * Gains in efficiency from joint estimation of _____. Charles R. Nelson..... 4 (1976) 331-348
- Systems of demand functions* * A comparative study of complete _____. N. Anders Klevmarken..... 10 (1979) 165-191
- t-ratio, asymptotic* * The graph of the *k*-class estimator: An algebraic and statistical interpretation. R.W. Farebrother and N.E. Savin..... 2 (1974) 373-388
- t-statistic* * Testing for functional misspecification in regression analysis. Andrew C. Harvey and Patrick Collier..... 6 (1977) 79-101
- t-tests* * Hypothesis testing based on goodness-of-fit in the moving average time series model. Charles R. Nelson and Gary S. Shea..... 10 (1979) 221-226
- Technical and allocative inefficiency* * Estimating _____. relative to stochastic production and cost frontiers. Peter Schmidt and C.A. Knox Lovell..... 9 (1979) 343-366
- Technical change in the U.S. primary metals industry*. John Wills..... 10 (1979) 85-98
- Technologies* * Duality theory and pitfalls in the specification of _____. David F. Burgess..... 3 (1975) 105-121
- Temporal aggregation*
- Some consequences of _____. and systematic sampling for ARMA and ARMAX models. K.R.W. Brewer..... 1 (1973) 133-154
- The effect of _____. of parameter estimation in distributed lag models. William W.S. Wei..... 8 (1978) 237-246
- Temporal cross-section data* * Estimation of a dynamic demand function for gasoline with different schemes of parameter variation. Jatinder S. Mehta, Gorti V.L. Narasimham and Paravastu A.V. B. Swamy..... 7 (1978) 263-279
- Temporal systems* * Causality in _____.: Characterizations and a survey. David A. Pierce and Larry D. Haugh..... 5 (1977) 265-293
- Temporally aggregated and temporally disaggregated data* * Linear regression using both _____. Cheng Hsiao..... 10 (1979) 243-252
- Test statistics* * Some small sample properties of estimators and _____. in the multivariate logit model. David K. Guilkey and Peter Schmidt..... 10 (1979) 33-42
- Theil best linear unbiased scalar estimator* * The power of four tests of autocorrelation in the linear regression model. Wilford L. L'Esperance and Daniel Taylor..... 3 (1975) 1-21
- Theil theorem* * A note on least squares estimation and the BLUE in a generalized linear regression model. Peter Schonfeld..... 3 (1975) 189-197
- Theil-Goldberger estimator*
- A note on extraneous information in regression. Richard Brook and T.D. Wallace..... 1 (1973) 315-316
- Regression using mixed annual and quarterly data. Christopher L. Gilbert..... 5 (1977) 221-239
- Three-input production function* * The translog function and the substitution of equipment, structures, and labor in U.S. manufacturing 1929-68. Ernst R. Berndt and Laurits R. Christensen..... 1 (1973) 81-114
- Three-stage least squares*
- Asymptotic properties of full information estimators in dynamic autoregression simultaneous equation models. P.J. Dhrymes and H. Erlat..... 2 (1974) 247-259

- K*-matrix-class estimators and the full-information maximum-likelihood estimator as a special case. Werner Scharf 4 (1976) 41-50
- Information and computation in simultaneous equations estimation. Warren Dent 4 (1976) 89-95
- On the computational competitiveness of full-information maximum-likelihood and _____ in the estimation of nonlinear, simultaneous-equations models. David A. Belsley 9 (1979) 315-342
- The relative impact of monetary and fiscal policy instruments: Some structure-based estimates. B.T. McCallum 2 (1974) 283-299
- The structure of simultaneous equations estimators. David F. Hendry... 4 (1976) 51-88
- Three-stage least-squares estimation* for a system of simultaneous, nonlinear, implicit equations. A. Ronald Gallant 5 (1977) 71-88
- Thresholds* * Censored regression models with unobserved, stochastic censoring _____. Forrest D. Nelson 6 (1977) 309-327
- Time-of-day pricing*
- A two-level electricity demand model: Evaluation of the Connecticut _____ test. J.A. Hausman, M. Kinnucan and D. McFadden 10 (1979) 263-289
- Residential load curve and _____. An econometric analysis. Clive W.J. Granger, Robert Engle, Ramu Ramanathan and Allan Andersen 9 (1979) 13-32
- Responsiveness to time-of-day electricity pricing: First empirical results. Scott E. Atkinson 9 (1979) 79-95
- Modelling and forecasting time-of-day and seasonal electricity demand. Annals of Applied Econometrics (edited by A. Lawrence and D. Aigner) 9 (1979) 1-240
- On modelling the residential demand for electricity by time-of-day. Lester D. Taylor 9 (1979) 97-115
- Residential demand for electricity: An econometric approach. Wallace Hendricks, Roger Koenker and Dale J. Poirier 9 (1979) 33-57
- The residential demand for electricity with _____. Anthony Lawrence and Steven Braithwait 9 (1979) 59-77
- Theoretical determinants of the industrial demand for electricity by time-of-day. John C. Panzar and Robert D. Willig 9 (1979) 193-207
- Time models*
- The construction and estimation of continuous _____ and discrete approximation in econometrics. Peter M. Robinson 6 (1977) 173-197
- The problem of identification in finite parameter continuous _____. P.C.B. Phillips 1 (1973) 351-362
- Time series*
- A Monte Carlo study of autoregressive integrated moving average processes. Warren Dent and An-Sik Min 7 (1978) 23-55
- An efficient two-step estimator for the dynamic adjustment model with autoregressive errors. Michio Hatanaka 2 (1974) 199-220
- Differencing of random walks and near random walks. Nichols J. Gonedes and Harry V. Roberts 6 (1977) 289-308
- Estimation of a dynamic demand function for gasoline with different schemes of parameter variation. Jatinder S. Mehta, Gorti V.L. Narasimham and Paravastu A.V.B. Swamy 7 (1978) 263-279
- Experience with using the Box-Cox transformation when forecasting economic _____. Harold L. Nelson, Jr. and C.W.J. Granger 10 (1979) 57-69
- Linear regression using both temporally aggregated and temporally disaggregated data. Cheng Hsiao 10 (1979) 243-252
- On typical characteristics of economic _____ and the relative qualities of five autocorrelation tests. C. Dubbelman, A.S. Louter and A.P.J. Abrahamse 8 (1978) 295-306

- Zero restrictions* * Identification of simultaneous equation models with measurement error. Vincent J. Geraci 4 (1976) 263-283

The Great Recession

An Econometric Account

by OTTO ECKSTEIN, *Data Resources, Inc., Lexington, Mass., U.S.A.*

DATA RESOURCES SERIES, Vol. 3.

1978. 216 pages. US \$24.50 / Dfl. 55.00 ISBN 0-444-85204-2

This book traces the events and decisions that produced the Great Recession, and uses econometric model analysis to assess the relative importance of the major factors - the Vietnam War, the collapse of the Nixon price controls, the agricultural price explosion, the OPEC price increases and embargo, the extreme swings of monetary policies, political variations in fiscal policy, the worldwide business cycle and the devaluation of the dollar. The book also analyzes how the economy escaped depression and why it was caught in the subsequent stagflation. The 800-equation Data Resources Model of the U. S. Economy is used to trace the path of the economy that might have developed if nothing had gone wrong. The difference between this path and the actual experience is explained by the listed factors by removing them, one at a time, from a model solution which reproduces the actual history. Various lessons are drawn for economic policies, and an assessment is reached whether the Great Recession was the critical turning point in the history of the advanced industrial countries or simply a particularly unhappy episode.

This work provides the first careful review of this critical episode of recent economic history. There has been no other work, so far, which uses the modern econometric model method to analyze the causes of the Great Recession. The book gives the most thorough and elaborate scientific assessment and analysis provided so far of a historical event. It can be used in a course on macroeconomics as a convenient and analytically organized history of recent business cycles and as an illustration of the uses and principles of monetary and fiscal policy. The book is a must for all economists interested in macroeconomics, econometrics and economic history.

CONTENTS: 1. Introduction. 2. If Nothing Had Gone Wrong: The Balanced Growth Path. 3. The Vietnam War. 4. Fiscal Policies: 1969-1974: Political Business Cycles? 5. Price Controls and Their Aftermath, 1971-74. 6. The 1972-73 Agricultural Price Explosion. 7. Monetary Policies. 8. The Worldwide Business Cycle and Devaluation of the Dollar. 9. Energy. 10. How We Escaped Depression. 11. Lessons from the Great Recession. **Postscript:** Stagflation: Is There a Way Out? **Appendix:** The Data Resources Model: Historical Perspective and an Overview.

Econometric Models, Techniques, and Applications

by MICHAEL D. INTRILIGATOR, *Professor of Economics, University of California, Los Angeles, U.S.A.*

ADVANCED TEXTBOOKS IN ECONOMICS, Vol. 9

A co-publication of NORTH-HOLLAND with PRENTICE-HALL.

1978. xvi + 638 pages. US \$26.00/Dfl. 60.00. ISBN 0-7204-3607-9

The excitement among pre-publication reviewers for Michael D. Intriligator's new text is understandable. As reviewer Robert McNown phrased it, 'It's a book that fills important gaps in existing offerings.'

The author's principal aim was to provide a book presenting the subject as a 'whole'. As a result, this book is the only text in econometrics that covers every important aspect of the subject. A self-contained introduction to and survey of the approach, techniques, and applications of econometrics, the book features a rare balance between these econometric techniques *per se*, and model building, data collection and applications in several contexts such as structural analysis, forecasting and policy evaluation.

ECONOMETRIC MODELS, TECHNIQUES, AND APPLICATIONS prepares students both to understand and to evaluate existing econometric studies in a wide variety of areas, and in addition prepares them to compose their own original econometric studies. The author shows considerable skill in explaining mathematical results in a clear, intuitive verbal style. The text is very well-suited for undergraduate or first-year graduate level econometrics courses, and while some calculus background is necessary, appendices summarize all the mathematics used throughout the text. It includes many useful challenging problems and also detailed bibliographies. The book, in short, represents a new, highly readable, empirically-oriented text, covering virtually every topic that could be of interest to students in an econometrics course.

CONTENTS: (Note: Bibliographies are included at the end of every chapter). Abbreviations and Notation. **PART I: Introduction.** 1. The Econometric Approach. **PART II: Models and Data.** 2. Models and Econometric Models. 3. Data and Refined Data. **PART III: Single-Equation Estimation.** 4. The Basic Linear Regression Model. 5. Extensions and Illustrations of the Basic Linear Regression Model. 6. Problems in the Basic Linear Regression Model. **PART IV: Applications of Single-Equation Estimation.** 7. Applications to Households: Demand Analysis. 8. Applications to Firms: Production Functions and Cost Functions. 9. Other Applications of Single-Equation Estimation. **PART V: Simultaneous-Equations.** 10. The Simultaneous-Equations System and Its Identification. 11. Estimation of Simultaneous-Equations Systems. **PART VI: Applications of Simultaneous-Equations Estimation.** 12. Applications to Macroeconometric Models. 13. Other Applications of Simultaneous-Equations Estimation. **PART VII: The Uses of Econometrics.** 14. Structural Analysis. 15. Forecasting. 16. Policy Evaluation. Appendices.

Indirect Management in a Centrally Planned Economy

System Constructions in Foreign Trade

by WITOLD TRZECIAKOWSKI, *Foreign Trade Research Institute, Warsaw, Poland.*

CONTRIBUTIONS TO ECONOMIC ANALYSIS, Vol. 115

Co-Publication with Polish Scientific Publishers

1978. x + 280 pages. US \$40.00/Dfl. 90.00 ISBN 0-7204-3100-X

Fascinated by the pioneer theses of the precursors of improvements in the management system of a socialist economy from the Economic Council, the author here summarizes theoretical and practical experiences of a team working since 1959. This is the work in the field of social engineering aimed at solving consecutively the problems posed by the political and economic leadership for the designers of models and various systems of decision-making in the fields of: choice of foreign trade variants in the planning process, construction of the first macro-economic system of indirect control over export production, construction of economic-financial principles of an experimental association of enterprises in the field of foreign trade, expansion of these principles to cover all production, choice of complementary investments, related to foreign trade, and, finally, the construction of an overall system of indirect control over foreign trade.

CONTENTS: Introduction. **Part I: Decision-making in a planned economy.** Chapters: 1. Decision-making systems and control systems. 2. Decision-making as a multi-stage and multi-phase process. 3. The selection and sequence of spheres of implementation of efficiency systems. **Part II: Models.** Chapters: 4. The stage of partial analysis of efficiency in foreign trade. 5. The model of short-run optimization of geographical allocation of foreign trade. 6. The overall model of current optimization of foreign trade (of the volume, commodity structure and geographical allocation). 7. The model of optimization of complementary investments. 8. The financial system and efficiency in management. **Part III: Practical applications in Poland.** Chapters: 9. The transition from models to practical applications. 10. Statistical determination of rates of structural and directional efficiency as initial rates of the optimization calculation for a foreign trade plan. 11. Efficiency in planning. 12. Systems of indirect control in 1966-1970. Construction principles and application. 13. The premises of socioeconomic policy after 1970 as a basis for system designs. 14. System constructions in foreign trade proposed for the period 1971-1980. 15. Directions for further studies. References. Index.

The Review of Economics and Statistics

Editor: HENDRIK S. HOUTHAKKER

Published under the auspices of the Economics Department of Harvard University, the *Review* relies for editorial guidance on specialists from many leading universities and research institutions. The *Review*, which is published in four issues totalling about 640 pages per year, welcomes contributions from economists in all countries and all fields but imposes a rigorous process of selection and revision. Those interested in contemporary economics at its best will find it invaluable.

A selection of articles scheduled for publication in 1979:

- Gary S. Fields.* Place to Place Migration: Some New Evidence.
Robert S. Pindyck. Interfuel Substitution and the Industrial Demand for Energy.
Bradley R. Schiller and Randall D. Weiss. The Impact of Private Pensions on Firm Attachment.
Paul Holden, Merle Holden, and Esther C. Suss. The Determinants of Exchange Rate Flexibility: An Empirical Investigation.
Stanley P. Stephenson, Jr. and John F. McDonald. Disaggregation of Income Maintenance Impacts on Family Earnings.
James H. Scott and Charles Wolf. The Efficient Diversification of Bids in Treasury Bill Auctions.
Carol A. Taylor. A Quarterly Domestic Copper Industry Model.
Martin Feldstein and Anthony Pellechio. Social Security and Household Wealth Accumulation: New Microeconomic Evidence.
Kenneth D. Garbade and William L. Silber. Dominant and Satellite Markets: A Study of Dually-Traded Securities.
Edwin Mansfield, Anthony Romeo, and Samuel Wagner. Foreign Trade and U.S. Research and Development.
Arthur De Vany and Nicolas Sanchez. Land Tenure Structures and Fertility in Mexico.

- Ann Bartel and Paul Taubman.* Health and Labor Market Success: The Role of Various Diseases.
Paul L. Joskow and George A. Rozanski. The Effects of Learning by Doing on Nuclear Plant Operating Reliability.
Michael E. Porter. The Structure within Industries and Companies' Performance.
Tsunemasa Shiba. The Personal Savings Function of Urban Worker Households in Japan.
Leonard Dudley. Foreign Aid and the Theory of Alliances.
Robert M. Feinberg. Market Structure and Employment Instability.
Glenn P. Jenkins and Claude Montmarquette. Estimating the Private and Social Opportunity Cost of Displaced Workers.
F. Desmond McCarthy and Lance Taylor. Macro Food Policy Planning: A General Equilibrium Model for Pakistan.
R. E. Caves, J. P. Jarrett, and M. K. Loucks. Competitive Conditions and the Firm's Buffer Stocks: An Exploratory Analysis.
Robert H. McGuckin and Donald R. Winkler. University Resources in the Production of Education.
Greg Duncan and Saul Hoffman. On-the-Job Training and Earnings Differences by Race and Sex.

PUBLICATION SCHEDULE: Quarterly (February, May, August and November). Volume 61 is being published in 1979.

SUBSCRIPTIONS: The annual subscription price is US \$46.25/Dfl. 95.00 (including postage and handling) for institutional subscribers.

Personal subscriptions are available from the Publisher only, and should be prepaid. The reduced rate is US \$24.00/Dfl. 54.00 (postage and handling included).

Incentives in Public Decision-Making

By JERRY R. GREEN, *Harvard University, Cambridge, Massachusetts, U.S.A.*
and JEAN-JACQUES LAFFONT, *Ecole Polytechnique, Paris, France*

STUDIES IN PUBLIC ECONOMICS, Vol. 1

1979. xviii + 293 pages. US \$48.75 / Dfl. 100.00 ISBN 0-444-85144-5.

This book provides a bold analytic treatment of the problem of incentives for the revelation of privately held information to be used for public purposes. The authors characterize what can and cannot be achieved by the design of a tax/subsidy system.

The book itself is divided into four parts. Part I presents an overview of the subject and its roots in theories of public finance, planning and social choice.

Part II specializes the framework, devoting primary attention to the case in which a transferable resource that exists enters utilities in an additively separable way. In this case a type of solution exists: it is characterized, and its features are explored.

Part III introduces a statistical approach through which some of the problems with the basic method can be advantageously extended to large systems.

Part IV considers extending the method to sequential planning procedures with myopic economic agents. This assumption restores the conditions of transferability and separability at each instant.

To the economist interested in incentive questions, this volume will provide both sound insights and innovative approaches to this exciting and rapidly developing field.

CONTENTS: Preface. **Part I.** Chapters: 1. Incentives in economic systems. 2. Social choice theory. **Part II.** 3. The basic model. 4. Satisfactory mechanisms. 5. On the limitations of dominant-strategy mechanisms. 6. Individual rationality. 7. Approaches to incentive compatibility not requiring dominance. **Part III.** 8. Large number economies. 9. On the imbalance of the budget. 10. Coalition incentive compatibility. 11. Large numbers and separability. 12. Economies in acquiring information through sampling. 13. Imperfect personal information. **Part IV.** 14. Dynamic approaches. 15. The MDP procedure. 16. A new procedure. References. Author Index. Subject Index.

Papers must be in English.

Papers for publication should be sent in triplicate to:

Professor Dennis Aigner, Department of Economics, University of Southern California, University Park, LOS ANGELES, CA 90007, USA.

Submission of a paper will be held to imply that it contains original unpublished work and is not being submitted for publication elsewhere. The Editor does not accept responsibility for damage or loss of papers submitted.

Manuscripts should be typewritten on one side of the paper only, double-spaced with wide margins. All pages should be numbered consecutively. Tables, references and legends for figures should be typed on separate pages. Titles and subtitles should be short.

The first page of the manuscript should contain the following information: (i) the title; (ii) the name(s) and institutional affiliation(s) of the author(s); (iii) an abstract of not more than 100 words. A footnote on the same sheet should give the name and *present address* of the author to whom proofs and reprint order form should be addressed.

Acknowledgements and information on grants received can be given before the References or in a first footnote, which should not be included in the consecutive numbering of footnotes.

Important formulae (displayed) should be numbered consecutively throughout the manuscript as (1), (2), etc. on the right-hand side of the page. Where the derivation of formulae has been abbreviated, it is of great help to referees if the full derivation can be presented on a separate sheet (not to be published).

Footnotes should be kept to a minimum and be numbered consecutively throughout the text with superscript arabic numerals.

The References should include only the most relevant papers. In the text, references to publications should appear as follows: "Smith (1969) reported that ..." or "This problem has been a subject in literature before [e.g., Smith (1969, p. 102)]". The author should make sure that there is a strict "one-to-one correspondence" between the names (years) in the text and those on the list. At the end of the manuscript (after any appendices), the complete references should be listed as:

For monographs

Tobin, James, 1971, *Essays in economics*, vol. 1, Macroeconomics (North-Holland, Amsterdam).

For contributions to collective works

Glejser, Herbert, 1970, Predictive world models, in: Colette Duprez and Etienne Sadi Kirschen, eds., *Megistos, A world income and trade model for 1975* (North-Holland, Amsterdam) 3-16.

For periodicals

Goldfeld, Stephen M. and Richard E. Quandt, 1973, A Markov model for switching regressions, *Journal of Econometrics* 1, 3-15.

Note that journal titles should not be abbreviated.

Illustrations should be provided in triplicate (1 original drawn in black ink on white paper + 2 photocopies). Care should be taken that lettering and symbols are of a comparable size. The drawings should not be inserted in the text and should be marked on the back with figure numbers, title of paper, and name of author. All graphs and diagrams should be referred to as figures and should be numbered consecutively in the text in arabic numerals. Graph paper should be ruled in blue and any grid lines to be shown should be inked black. Illustrations of insufficient quality which have to be redrawn by the publisher will be charged to the author.

All unessential tables should be eliminated from the manuscript. Tables should be numbered consecutively in the text in arabic numerals and typed on separate sheets.

Empirical studies must include a short appendix describing the data and computational procedures. Review articles that contain simulation results must include a brief appendix describing the random number generator used and any other relevant computational aspects of the study. The editors will decide whether the appendix itself is to be published along with the final version of an accepted manuscript.

A manuscript which does not conform to the above instructions may be returned for the necessary revision before publication.

Proofs will be sent to the authors. Corrections other than printer's errors may be charged to the author. 25 reprints of each paper are supplied free; additional reprints are available at cost if they are
